

# M.U.T.- III Owner's Manual

## Multi Use Tester

< Ver. 30.0 >

## M.U.T.-III Owner's Manual

---

### Foreword

This manual explains M.U.T.-III functions, operating procedures, and other related information. By reading this manual you will obtain a basic understanding of M.U.T.-III and Vehicle Communication Interface (hereafter abbreviated as V.C.I.) functions and methods of operation. Because there are differences in M.U.T.-III methods of operation due to the vehicle electronic control system, be sure to read this manual and Online Help prior to operation. This manual was written based on the Sep. 2011 version of the M.U.T.-III system. Please note that the information herein may not always agree with your version of the M.U.T.-III system due to system specification changes and version upgrades. Please take good care of this manual along with your M.U.T.-III product.

## Table of Contents

<b>Chapter 1 Product Overview</b> .....	<b>1</b>
1-1. Precautions .....	1
1-2. V.C.I. Outline Drawing and Component Names .....	2
1-3. M.U.T.-III Components Explanations .....	4
1-4. Harness Connection Method .....	7
1-5. Combination Chart of Harness and Vehicle .....	8
<b>Chapter 2 M.U.T.-III Functions</b> .....	<b>11</b>
2-1. Basic Functions .....	11
2-2. V.C.I. Functions .....	12
<b>Chapter 3 Operating M.U.T.-III</b> .....	<b>14</b>
3-1. Starting and Shutting Down the M.U.T.-III System .....	14
3-2. Screen Explanations .....	15
3-3. Basic Flow to Start Diagnosis .....	17
3-4. Option Settings .....	20
3-5. Useful Functions .....	21
<b>Chapter 4 Diagnosis Function</b> .....	<b>22</b>
4-1. Diagnostic Trouble Code .....	22
4-2. Data List (Service Data monitor) .....	23
4-3. Actuator Test .....	27
4-4. V.C.I. Stand-alone Diagnosis .....	30
4-5. All DTCs .....	35
<b>Chapter 5 Special Function (Calibration &amp; Setting)</b> .....	<b>38</b>
5-1. ECU Information .....	38
5-2. Learned Value Reset .....	38
5-3. Seat Weight Sensor Accuracy Check .....	39
5-4. Steering Angle Sensor Calibration .....	41
5-5. Lateral G Sensor Calibration .....	43
5-6. TPMS ID Registration and Checking .....	44
<b>Chapter 6 Drive Recorder</b> .....	<b>47</b>
6-1. How to Record the Data .....	47
6-2. Recorded Data Handling .....	59
6-3. Display and Analysis of the Recorded Data .....	64
<b>Chapter 7 SWS Monitor</b> .....	<b>70</b>
7-1. SWS Monitor Operation .....	70
<b>Chapter 8 Coding Function</b> .....	<b>76</b>
8-1. VIN Writing Function .....	76
<b>Chapter 9 CAN Bus Diagnosis</b> .....	<b>78</b>
9-1. Diagnosing the CAN Bus .....	78

---

<b>Chapter 10 ECU Reprogramming .....</b>	<b>79</b>
10-1. Process Flow Chart .....	79
10-2. Equipment .....	80
10-3. Data Preparation on PC from Update CD-ROM .....	82
10-4. Reprogramming Operation (V.C.I. alone).....	83
10-5. Reprogramming Operation (V.C.I. - PC connected).....	90
10-6. Reprogramming by CAN Communication.....	94
10-7. Troubleshooting of Reprogramming.....	97
<b>Chapter 11 Computer Diagnosis.....</b>	<b>98</b>
11-1. Operation method of MiEV Computer Diagnosis .....	98
<b>Chapter 12 Measurement Functions .....</b>	<b>104</b>
12-1. Injector-Type Fuel Consumption Measurement .....	104
12-2. Electricity Consumption Measurement .....	106
12-3. Fuel pressure, Voltage, Ohmmeter, Oscilloscope .....	110
<b>Chapter 13 How to Use (Special Case) .....</b>	<b>113</b>
13-1. Copy Coding.....	113
13-2. VIN Writing and VIN Information.....	114
13-3. Coding Operation.....	118
13-4. Customization Operation .....	122
<b>Chapter 14 Troubleshooting Procedures.....</b>	<b>125</b>
14-1. Individual Troubleshooting Procedures.....	125
14-2. Troubleshooting Procedures on V.C.I. Firmware Update.....	127
14-3. Troubleshooting of V.C.I. Stand-alone Diagnosis.....	130
14-4. Troubleshooting of Reprogramming.....	131
<b>Chapter 15 Reference Material.....</b>	<b>134</b>
15-1. V.C.I. Electrical Properties .....	134
15-2. V.C.I.-Lite Electrical Properties .....	134
<b>Appendix .....</b>	<b>135</b>
<< Terminology >> .....	135
<< Screen Button Explanations >> .....	137

## For Your Safety

### For Your Safety

To ensure proper use of this product and prevent personal injury and property damage, various graphic displays are used in the user's manual. The graphic displays and respective meanings are described below.

 <b>Warning</b>	Warning messages alert you to a procedure or practice which, if not followed correctly, could lead to death or serious injury.
 <b>Caution</b>	Caution messages alert you to a procedure or practice which, if not followed correctly, could lead to serious injury and/or property damage.

<b>Icon Examples</b>	<p>The  symbol alerts you to a prohibited action.</p> <p>The  symbol alerts you to an action that must be enforced.</p>
----------------------	---

 <b>Warning</b>	
<p>Drivers should not operate the unit while driving.</p> <ul style="list-style-type: none"> <li>Operating the unit while driving may result in a traffic accident.</li> </ul> <div style="text-align: right;"></div>	<p>Do not plug in or unplug the power AC adapter with wet hands.</p> <ul style="list-style-type: none"> <li>Doing so results in the risk of electric shock.</li> </ul> <div style="text-align: right;"></div>
<p>When using the cigarette lighter plug to supply power to the V.C.I. unit, be sure the power voltage supplied is DC32V or less.</p> <ul style="list-style-type: none"> <li>Applying a voltage greater than DC32V results in the risk of fire.</li> <li>M.U.T.-III as provided to dealers includes 12V accessory / cigarette lighter plug adapter to power M.U.T.-III during extended test drives.</li> </ul> <div style="text-align: right;"></div>	<p>Maximum voltage the V.C.I. can withstand is 40V. Do not use the V.C.I. on systems greater than the 32-volt system mentioned previously.</p> <ul style="list-style-type: none"> <li>Violating this requirement results in the risk of a ground fault, damage and/or electric shock.</li> </ul> <div style="text-align: right;"></div>

## For Your Safety

### Warning

The V.C.I. screen is liquid crystal display or LCD. In the unlikely event that the display breaks due to impact, do not let your skin come in contact with the LCD fluid.

- If your skin comes in contact with the LCD fluid, wash your skin thoroughly with water. If skin rash or abnormality occurs seek medical attention from a doctor.

Do not use the unit if the power AC adapter plug or cord is damaged or plugging into the outlet is loose.

- Use under such conditions may result in electric shock, an electric short and/or fire.

Be sure to hold the harness connector when disconnecting from the vehicle. Do not disconnect the harness by pulling on the cord.

- Pulling the cord rather than the connector may result in damage to the lead wire inside the cord, thereby causing a short and possibly starting a fire.

Unplug the power AC adapter from the outlet when the unit is not in use.

- Failure to do so may result in injury, burns, electric shock caused by insulation deterioration, or fire due to a short circuit.

### Warning

When the harness is connected to the V.C.I., be sure to check the top and bottom of the connector and connect the harness perpendicularly to the connector of the V.C.I.

Connecting at an angle may result in bending of the pins of the connector.

Check for the secure connection of the harness before tightening of the screw locks.

- **The bent pin may contact the connector case, thereby causing an electric short which leads to damage to the V.C.I.**

## For Your Safety

---

---

### Please Note

Do not expose the PC or V.C.I. to direct sunlight or high temperatures, or leave the unit in sun-heated cars. Such action may result in system failure.

Store the PC and V.C.I. in a dry environment at room temperatures.

Moving the PC and V.C.I. to a location with a very different temperature and humidity than that of the previous location may result in external or internal condensation. Caution is required.

Protect the PC and V.C.I. from exposure to elements such as rain, dirt, dust, food and liquids.

Be careful when handling the PC and V.C.I. Dropping the units may result in damage.

Do not expose either unit to engine oil, gasoline, antifreeze or battery acid. Also, do not clean the PC or V.C.I. case using solutions such as thinner or benzene. Doing so may result in deterioration of the case surface.

Prior to connecting the M.U.T.-III main harness between the V.C.I. and vehicle, turn the IG switch to OFF.

- Connecting the V.C.I. harness with the IG switch ON may damage the V.C.I. programming.

Use only the power AC adapter included with the PC (or approved replacement), power cigarette plug, other probes, main harness and other cables.

- Use of unspecified parts may result in damage or malfunction due to excess voltage or insufficient contact.

The LCD display of this unit turns off when the supplied voltage is less than DC 8V. This is not an error.

The power supplied should be from 8VDC to 32VDC.

Keep all V.C.I. connectors and openings away from dirt and static electricity. Exposure to dirt and static electricity may result in malfunction and damage.

## Precautions

---

### Chapter 1 Product Overview

#### 1-1. Precautions

#### Service Work Precautions

- Be sure to follow all basic service work precautions when using M.U.T.-III during vehicle inspection and service work.
- For detailed information regarding service work precautions, refer to the service instruction manual of each vehicle.

#### Work Precautions

- When performing vehicle inspection work at the work site with the engine running, either use an exhaust gas discharger or ventilate the area sufficiently.
- When working on a vehicle, be sure to apply the parking brake and set wheel chocks in place to prevent the car from moving.

#### Driving Precautions

- If you wish to use M.U.T.-III while driving the target vehicle, first verify that all parts are properly assembled.
- While driving, always have an assistant operate M.U.T.-III.
- Be sure that the M.U.T.-III main harness and other cables will not interfere with driving.
- Install and remove the PC and V.C.I. with the vehicle parked, IG switch OFF.

#### PC Usage Limitations

#### Do Not Install Software on the PC

- The M.U.T.-III PC is a special service tool. Do not install any software other than M.U.T.-III software onto the unit. Installation of other software results in the risk of M.U.T.-III system failure.
- Any unauthorized software will not be supported. Technical support for units with unauthorized software will be charged additional technical support fees to return the unit to its authorized state of operation.
- All unauthorized software will be erased with each new upgrade.

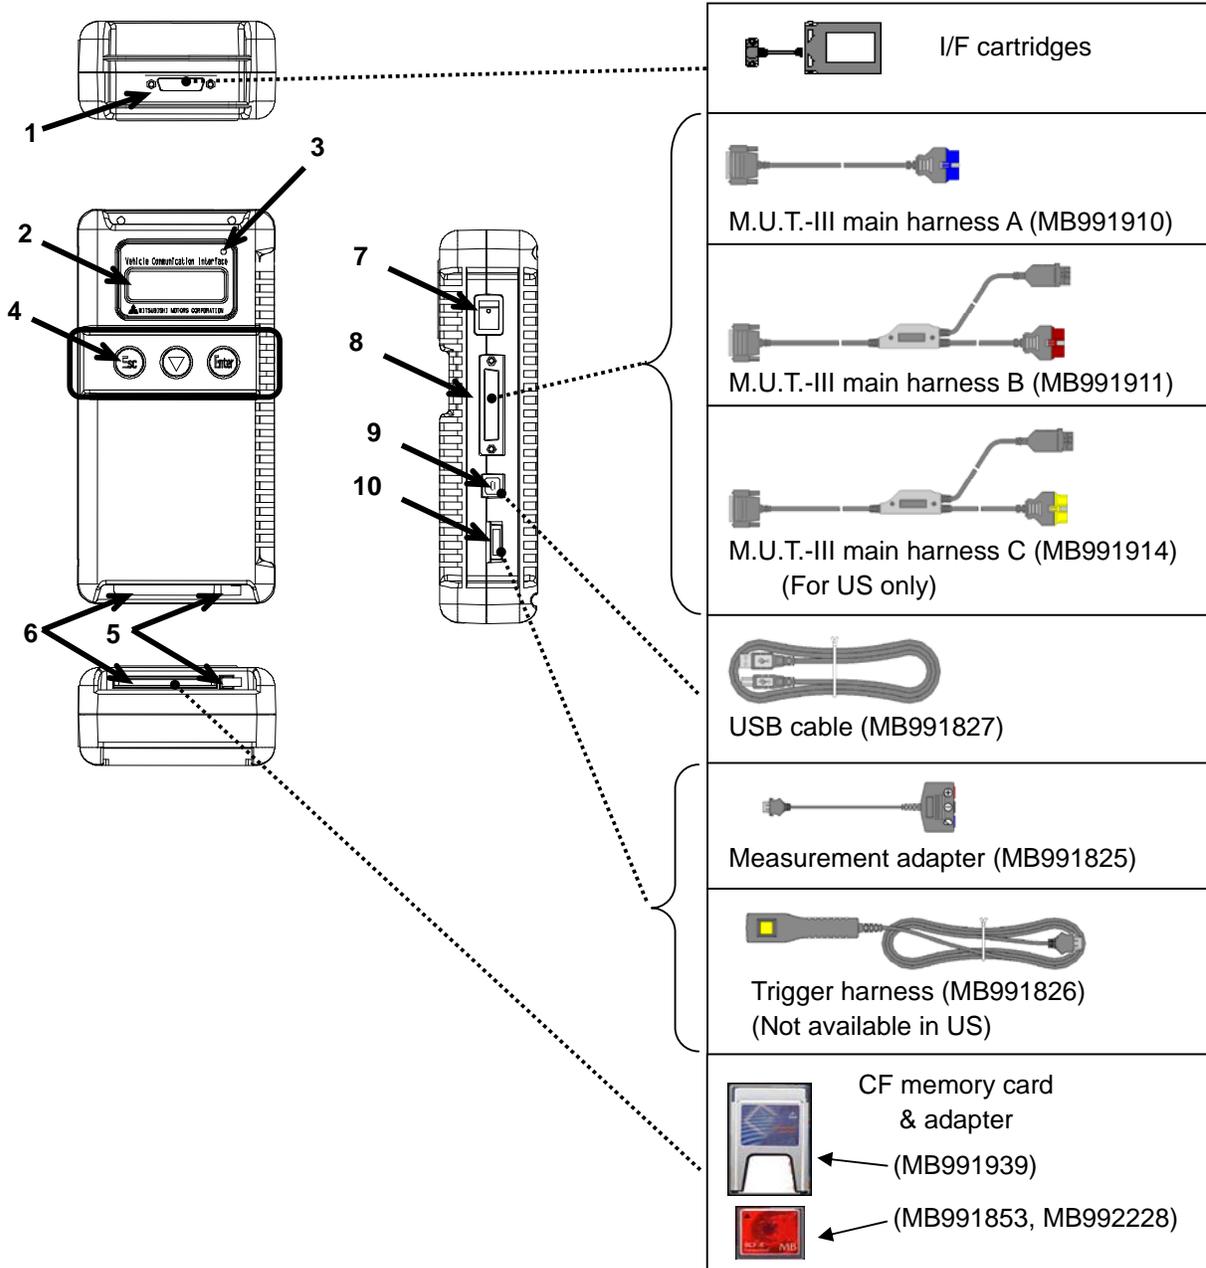

## V.C.I. Outline Drawing and Component Names

### 1-2. V.C.I. Outline Drawing and Component Names

#### 1-2-1. V.C.I.

The names of the V.C.I. components are indicated in the figure below.

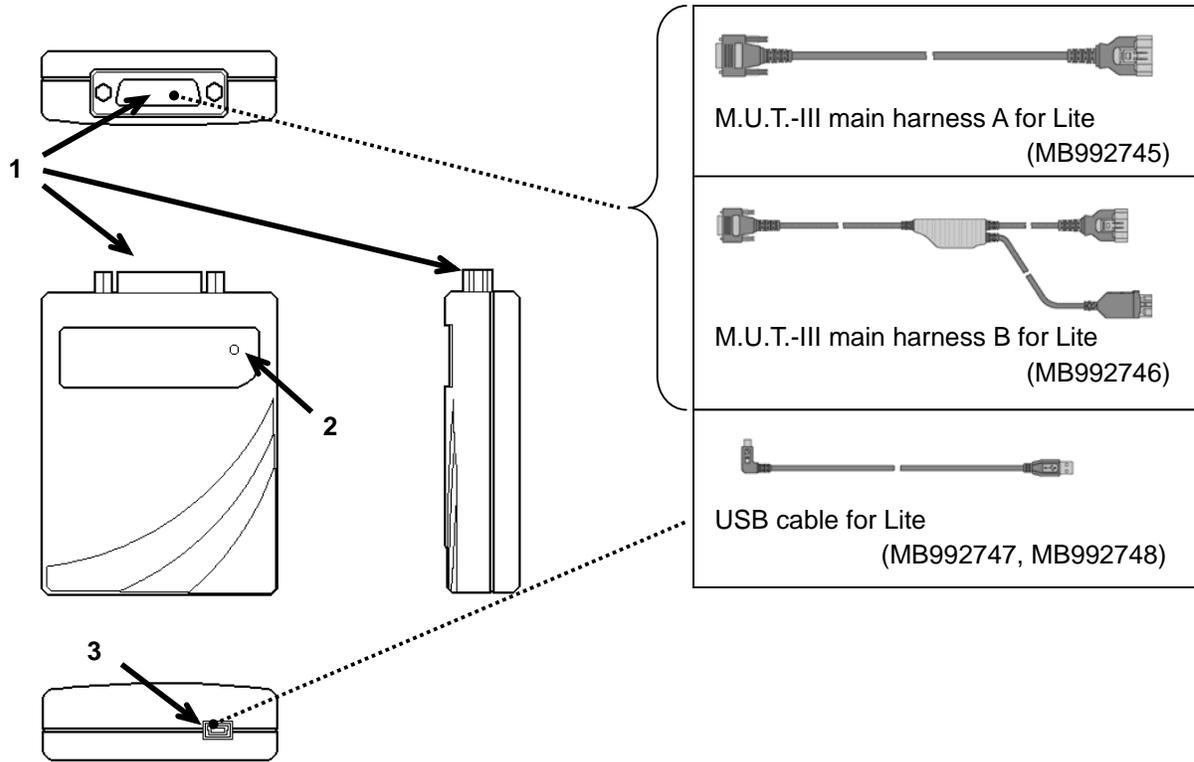

#### <<Component Names>>

- |                              |                               |
|------------------------------|-------------------------------|
| 1. I/F cartridge terminal    | 6. Memory card insertion port |
| 2. LCD screen                | 7. Power switch               |
| 3. Indicator lamp            | 8. Main harness terminal      |
| 4. Operation button          | 9. USB terminal               |
| (Used with V.C.I. functions) | 10. Trigger terminal          |
| 5. Memory card removal lever |                               |

## V.C.I. Outline Drawing and Component Names

### 1-2-2. V.C.I.-Lite

The names of the V.C.I.-Lite components are indicated in the figure below.

<<Component Names>>

1. Main harness terminal
2. Indicator lamp
3. USB terminal

## M.U.T.-III Components Explanations

---

### 1-3. M.U.T.-III Components Explanations

- (1) **Vehicle Communication Interface (V.C.I.)** (MB991824)  
**Vehicle Communication Interface-Lite (V.C.I.-Lite)**  
(MB992744)

A communication interface used to connect the vehicle ECUs and the PC.

V.C.I.

V.C.I.-Lite

1. When connected with the PC
  - Vehicle diagnosis  
(Interactive fault diagnosis with MEDIC-II)
  - SWS communication & CAN communication support & DCC support
  - Drive recorder
  - ECU reprogramming
  - Volt, Ohm, measurement
  - Fuel pressure measurement (Not available in US)
  
2. When used with the V.C.I. unit (disconnected from PC)
  - V.C.I. Stand-alone diagnosis
  - Drive recorder
  - ECU reprogramming
  - Volt, Ohm measurement
  - Belt Tension measurement

V.C.I.-Lite does not support stand-alone functionalities.

Functionalities for V.C.I./V.C.I.-Lite are as follows,

Function	V.C.I.	V.C.I.-Lite
ECU Diagnosis (Interactive Diagnosis)	○	○ <sup>*1</sup>
Drive Recorder	○	○ <sup>*2</sup>
ECU Reprogramming	○	○ <sup>*2</sup>
Voltmeter / Ohmmeter	○	
Stand-alone diagnosis	○ <sup>*3</sup>	
Fuel Pressure Measurement	○	
Oscilloscope	○	
Belt Tension Measurement	○ <sup>*3</sup>	

\*1 : Does not Support the following functions.

- Communication system other than K-line/CAN.
- SWS monitor.
- Simulated vehicle speed

\*2 : Needs to be used with PC

- \* V.C.I.-Lite does not support stand-alone functionalities.

\*3 : This functionality is only available with V.C.I. Stand-alone.

## M.U.T.-III Components Explanations

---

### (2) Memory Card

Stores data for ECU reprogramming, drive recorder, etc. This is a standard, off-the-shelf memory card. The one provided (with reprogramming data) is a Compact Flash memory card (MB991853, MB992228) inserted into the CF card adapter (MB991939).

It is necessary to initialize a Compact Flash memory card by FAT16 and FAT32 format. (NTFS format cannot use)

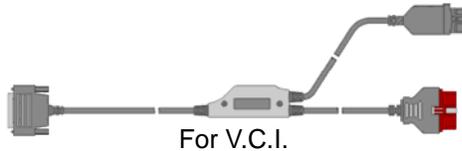

### (3) M.U.T.-III Main Harness A (MB991910)

#### M.U.T.-III Main Harness A for Lite (MB992745)

Used when connecting the V.C.I. with vehicles that have only one 16-pin data-link-connector.

- Supports fault diagnosis and ECU updating on the above-described vehicles
- Supports the CAN communication system

Note : Use MB991910 for V.C.I. and MB992745 for V.C.I.-Lite.

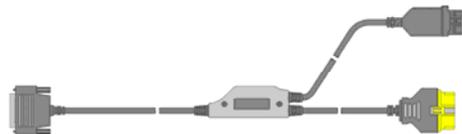

### (4) M.U.T.-III Main Harness B (MB991911)

#### M.U.T.-III Main Harness B for Lite (MB992746)

Used when connecting V.C.I. with vehicles that have a 16-pin + 12-pin or 16-pin + 13-pin data-link-connector.

For models equipped with only 12-pin (or 12-pin + 12-pin) data-link-connector, connect the M.U.T.-II adapter harness (MB991498) to the end of this harness in the same as M.U.T.-II, and power is supplied from the cigarette lighter socket.

Note : Use MB991911 for V.C.I. and MB992746 for V.C.I.-Lite.

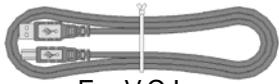

### (5) M.U.T.-III Main Harness C (MB991914) (For US only)

Used when connecting the V.C.I. with vehicles that have the 420A engine and F4AC1 transaxle.

## M.U.T.-III Components Explanations

---

For V.C.I.

For V.C.I.-Lite

(6) **USB Cable** (MB991827)

**USB Cable for Lite** (MB992747, MB992748)

Used to connect the PC to the V.C.I.

There are two kinds of cable for V.C.I.-Lite 0.3m and 3m.

Note : Use MB991827 for V.C.I. and MB992747 or MB992748 for V.C.I.-Lite

(7) **Trigger Harness** (MB991826) (Not available in US)

(Not supported by V.C.I.-Lite)

A harness with a trigger button used to manually insert a trigger point for data acquisition from the drive recorder function during data recording.

(8) **Measurement Adapter** (MB991825)

(Not supported by V.C.I.-Lite)

An adapter used to connect the V.C.I. and measurement probe for voltmeter and ohmmeter readings.

Or used when outputting Simulated Vehicle Speed with a vehicle whose diagnosis-connector cannot receive vehicle speed signal.

(9) **Measurement Test Leads** (MB991499)

(Not supported by V.C.I.-Lite)

Test leads used for voltage and / or resistance measurement.

Test leads MB991499 acquire quality replacement test leads from Radio Shack or similar electronics stores.

(10) **I/F Cartridge**

(Not supported by V.C.I.-Lite)

Used to implement special functions that cannot be implemented with the V.C.I. unit alone. The following I/F cartridges used with M.U.T.-II can be used with M.U.T.-III as well:

- SWS monitor cartridge (MB991806)
- Tension meter cartridge (MB991669)
- Chrysler Corporate I/F cartridge (MB991544)  
(For US Only)

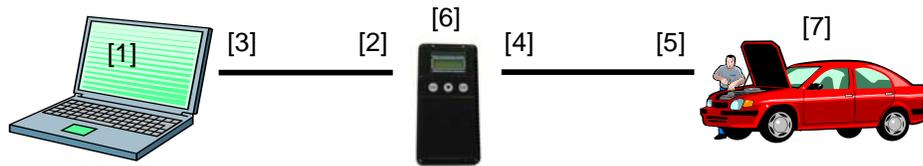

# Harness Connection Method

## 1-4. Harness Connection Method

### Recommended harness connection sequence

- [1] Start the PC.
- [2] While the PC is starting, connect the USB cable to the V.C.I. or V.C.I.-Lite.
- [3] After the PC boots to the M.U.T.-III main screen, connect the USB cable to the PC.  
Note: Disconnect the USB cable from the V.C.I. after the PC has shut down. However, if the USB cable is disconnected during use, a warning message indicating device disconnection such as that shown in Figure 1 appears. Close the message display by pressing the **OK** button.
- [4] Select the appropriate M.U.T.-III main harness. Connect it to the V.C.I. or V.C.I.-Lite.
- [5] Connect the M.U.T.-III main harness to the vehicle data-link-connector. (See Figure 2)  
Note: Disconnect the harnesses by performing the above steps in the reverse order.
- [6] Turn the V.C.I. power switch ON and verify that the indicator lamp located in the upper right area of the LCD screen is green. For V.C.I.-Lite please make sure that the indicator lamp is green.
- [7] Turn the vehicle ignition switch ON, and begin the diagnostic process from the M.U.T.-III system screen.

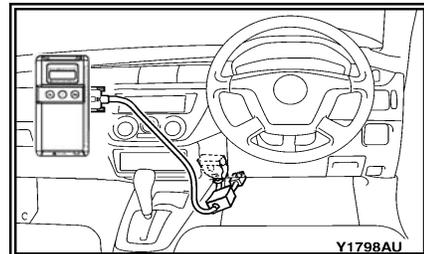

Note: In case the version of V.C.I. and the firmware version of V.C.I., which are mismatch, a dialog box appears on PC screen, and the V.C.I. version upgrade process begins. This upgrade typically only occurs once per M.U.T.-III system upgrade. Normal V.C.I. upgrades take about 1 minute. If a version upgrade error occurs, restart the V.C.I. by turning V.C.I. power OFF then, while pressing the Esc button, turn the V.C.I. power switch ON and begin the diagnostic process again. If versionup error(the indicator lamp blinks) occurs on V.C.I.-Lite, versionup will be restarted with reconnection.

<Fig. 1>

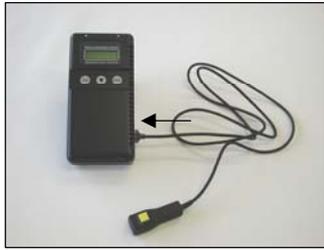

<Fig. 2>

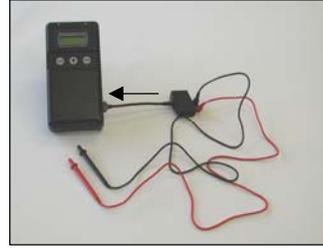

## Harness Connection Method / Combination Chart of Harness and Vehicle

<Connecting the Trigger Harness>

Connect the trigger harness to the V.C.I. trigger terminal.  
(Not available in US)

<Connecting the Measurement Adapter and Measurement Probe>

Connect the measurement adapter to the V.C.I. trigger terminal. Insert the measurement leads to the adapter. For best results, match the test lead colors with those on the adapter.

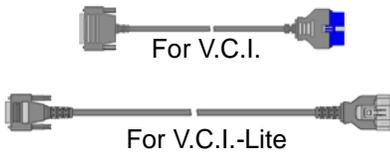

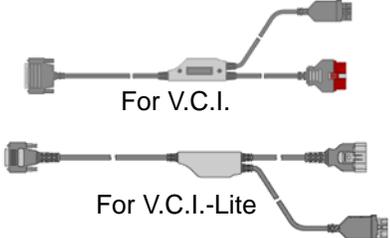

### 1-5. Combination Chart of Harness and Vehicle

Use of the M.U.T.-III main harness A, B or C (US only) is determined by the type of data-link connector installed in the vehicle.

The main harness, indicated with "O", is used in combination with another harness indicated with "●" depending on the vehicle and work to be performed. ECU update used below means ECU reprogramming.

Vehicle Data-link Connector \ Diagnostic Function		01		02		03	04	05
		M.U.T.-III Main Harness A	M.U.T.-III Main Harness A for Lite	M.U.T.-III Main Harness B	M.U.T.-III Main Harness B for Lite	M.U.T.-III Main Harness C	Conventional Vehicle Inspection Adapter Harness	ECU Update Adapter Harness
16Pin	Fault diagnosis	O	O					
	ECU update	O	O					
16Pin&12Pin	Fault diagnosis			O	O			
	ECU update			O	O			
12Pin	Fault diagnosis			O			●	
	ECU update	-	-	-	-	-	-	-
16Pin&13Pin	Fault diagnosis			O	O			
	ECU update			O	O			●
Vehicle with 420A Engine and F4AC1 Transaxle	Fault diagnosis					O		
	ECU update	-	-	-	-	-		

## Combination Chart of Harness and Vehicle

Harness Name		Illustration
01	M.U.T.-III Main Harness A MB991910 M.U.T.-III Main Harness A for Lite MB992745	
02	M.U.T.-III Main Harness B MB991911 M.U.T.-III Main Harness B for Lite MB992746	
03	M.U.T.-III Main Harness C MB991914 (For US only)	
04	Conventional Vehicle Inspection Adapter Harness (M.U.T.-II adapter harness) MB991498	
05	ECU Update Adapter Harness MB991855	

### Vehicle diagnostic connector - 16pin type

to 16pin diagnosis connector

Main harness A  
(MB991910)

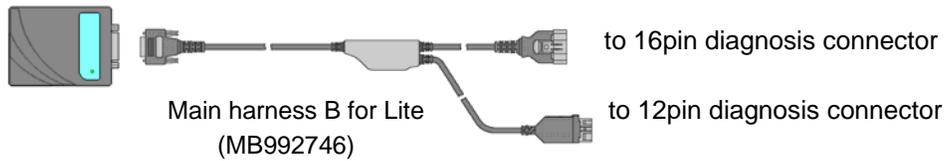

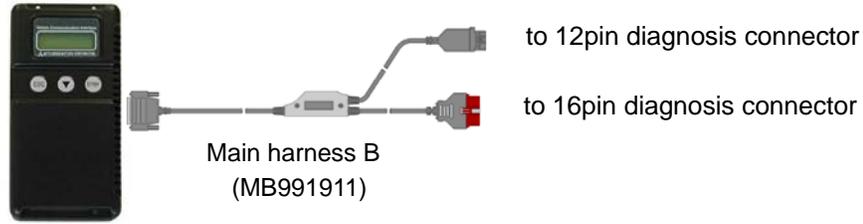

to 16pin diagnosis connector

Main harness A for Lite  
(MB992745)

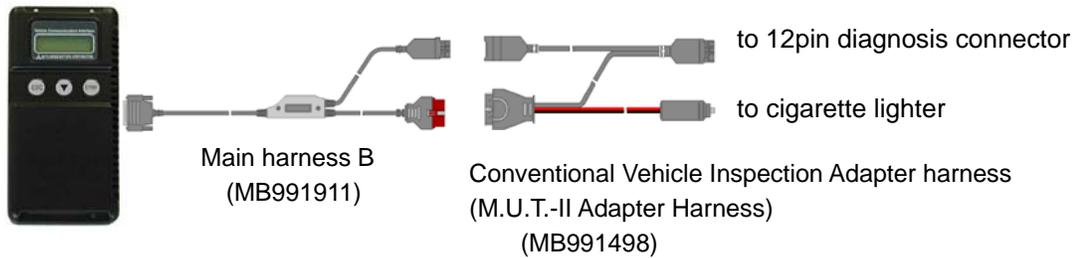

## Combination Chart of Harness and Vehicle

---

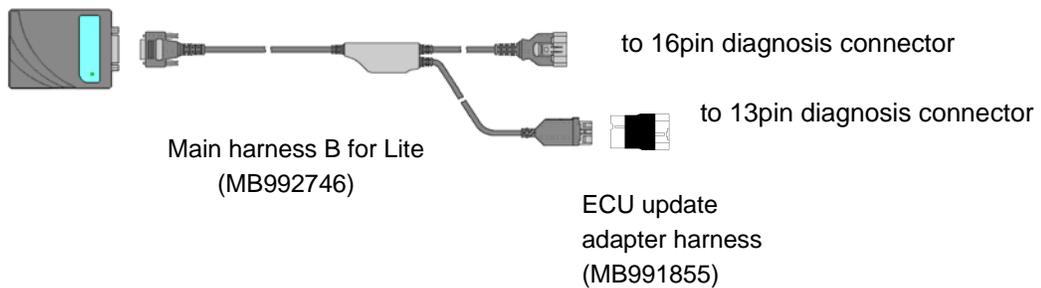

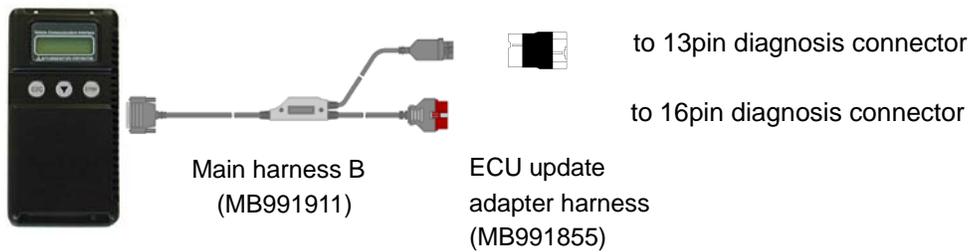

### Vehicle diagnostic connector - 16pin type + 12 pin type

### Vehicle diagnostic connector - 12pin type

### Vehicle diagnostic connector - 16pin type + 13 pin type

## Basic Functions

### Chapter 2 M.U.T.-III Functions

#### 2-1. Basic Functions

Can be used with all vehicle installed electronic control systems (with built-in diagnostic functions) from model year 1984.

Function	Synopsis
<b>DTC readout</b>	Reads various diagnostic codes and displays the codes by name and number.
<b>Data List</b>	Reads RAM data inside ECU and displays the data in digital and graphic form. (Available with ECUs that support serial communication only)
<b>Actuator tests</b>	Permits forced operation or shutdown of various types of actuators that is required for service. (Available with ECUs that support serial communication only)
<b>Simulated vehicle speed</b>	Outputs vehicle speed signal to appropriate ECUs facilitating diagnosis without travel. (Not support on V.C.I.-Lite for it in pulse)
<b>Drive Recorder</b>	Permits recording and displaying arbitrary service data that is determined for an arbitrarily specified time.
<b>Voltmeter</b>	Permits measurement of DC voltage within the range of 0- ±40V using the voltage measurement function. (Not support on V.C.I.-Lite)
<b>Ohmmeter</b>	Permits measurement of resistance within the range of 0-100KΩ using the resistance measurement function. (Not support on V.C.I.-Lite)
<b>SWS Diagnosis</b>	Permits SWS diagnosis using the SWS monitor kit (MB991806). (Not support on V.C.I.-Lite)
<b>CAN Bus Diagnosis</b>	Identifies CAN bus failures that occur in vehicle that is subject to the diagnosis and narrows down a cause.
<b>ECU Reprogramming</b>	Permits updating programs in ECU for system version upgrade.
<b>Electronic service information</b>	Displays with Service manual data. In addition, the system supports interactive fault diagnosis. The Interactive Diagnosis permits user to use both the scan tool viewing functions and service manual troubleshooting procedures. (Not available in US)
<b>Tension meter</b>	Permits measurement of belt tension using Belt tension meter set (MB991668). * Belt tension meter set had ended production. (Not support on V.C.I.-Lite)
<b>Fuel pressure meter</b>	Permits measurement of fuel pressure using a pressure gauge set (MB991637 / MB991981), and displays it on PC. (Not available in US) (Not support on V.C.I.-Lite)
<b>Fuel consumption measurement</b>	Permits more precise measurement of fuel consumption by measuring injection quantity of fuel injector.

## 2-2. V.C.I. Functions

### <When V.C.I. or V.C.I.-Lite and PC are connected>

#### 2-2-1. Fault Diagnosis

The system diagnoses faults by receiving instructions from the PC and communicating with the vehicle-installed ECU. When the system is connected to the PC, V.C.I. keys are disabled.

[Start Screen] (No LCD screen on V.C.I.-Lite)

\*When the USB cable is connected to the system, the screen illustrated on the left appears.

The screen indicates the flow of signals between the PC (P) and V.C.I. (V) using "P → V" and "P ← V".

#### 2-2-2. Fuel Pressure measurement (Not available in US)

(Not support on V.C.I.-Lite)

The system analyzes faults by measuring fuel pressure using the Pressure gauge set (MB991637 or MB991981).

{ Pressure gauge for LP: MB991655 or MB991979 }  
for HP: MB991708 or MB992007 }

The V.C.I. reads the fuel pressure, which is converted into voltage value by the pressure gauge. Then the system converts it back to pressure value and displays it as text or graph on PC screen. (refer to [12-3-1.](#))

### <With the V.C.I. only>

#### 2-2-3. Measurement Function - Voltmeter / Ohmmeter

(Not support on V.C.I.-Lite)

The system reads the voltage/resistance value from the trigger terminal and displays the value on the V.C.I. LCD screen.

1. Connect the measurement adapter to the V.C.I., connect the test leads to the adapter.
2. Connect the appropriate main harness to the V.C.I., and then to the vehicle diagnostic leak connector and turn the V.C.I. power switch ON.
3. Press  button to select Voltmeter or Ohmmeter in the Main Menu (see the illustration on the left), and press the  (Enter) button to begin measurement.

Note:

- Permits measurement of DC voltage within the range of 0-±40V.
- Permits measurement of resistance within the range of 0-100KΩ.
- Permits displaying the value as text or graph on PC screen by connecting the V.C.I. to PC. (refer to [12-3-2.](#))

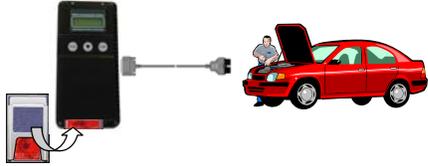

## V.C.I. Functions

---

### 2-2-4. V.C.I. Stand-alone Diagnosis

(Not support on V.C.I.-Lite)

You can read out DTCs with V.C.I. stand-alone by using a memory card, which is storing a diagnostic data transferred from PC. There is no need to carry PC or USB cable on the diagnosing vehicle. (For detailed operation, see 4-4)

1. Transfer the diagnostic database file into a memory card. (4-4-1)
2. Insert the memory card into V.C.I., then connect the V.C.I. and the vehicle with an appropriate main harness.
3. Start reading out DTCs from vehicle-installed ECU by V.C.I. stand-alone. (4-4-2)

Note:

Until a new database file will be distributed, you do not have to operate above step1. Please proceed just step2 and 3.

# Starting and Shutting Down the M.U.T.-III System

## Chapter 3 Operating M.U.T.-III

### 3-1. Starting and Shutting Down the M.U.T.-III System

#### 3-1-1. Starting the M.U.T.-III System

[Starting the PC]

Turn on the power of M.U.T.-III PC.

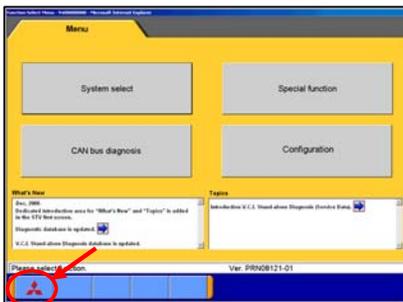

For instruction on how to start up the M.U.T.-III Scan Tool Viewer (STV) system, please refer to the operation manual of the MEDC-II system.

#### 3-1-2. Shutting Down the M.U.T.-III System

[Closing M.U.T.-III System]

- (1) Press  button on each diagnostic screen to return to the STV Top Menu screen (see (2)).

- (2) M.U.T.-III system can be closed down by pressing  button on this screen.

#### Trademarks

- Microsoft®, Windows 2000®, Windows XP®, Windows Vista®, Windows 7® and Internet Explorer® are trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.
- Adobe, the Adobe logo, and Reader are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.

# Screen Explanations

## 3-2. Screen Explanations

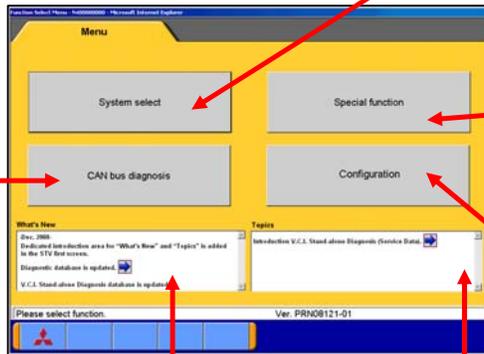

### < STV Top Menu >

Starts the CAN bus diagnosis.  
Refer to Chapter 9.

To diagnose vehicles by selecting each system (ECU).  
e.g.

- Reading diagnostic trouble code
- Actuator test -Drive recorder

For detailed operation procedure, refer to 3-3-1.

- To display saved data (Drive recorder, SWS monitor)

The function to be mentioned or countermeasure of FAQ is being written in this window.

Clicking on this button more details can be found.

### < System Selection Screen >

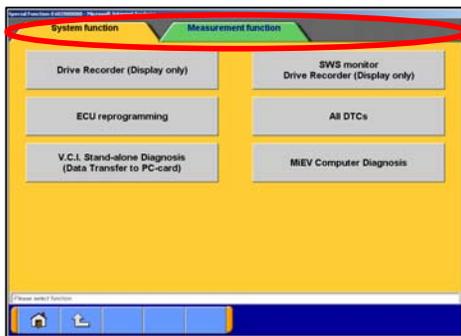

This screen is for specifying a system that you want to diagnose.

As operation procedure differs according to the vehicle's Model Year, please select "Up to 2005MY" or "From 2006MY" firstly. (refer to 3-3-1)

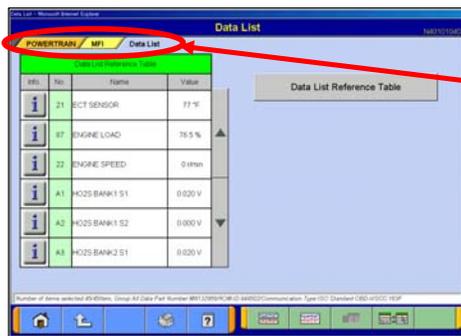

## Screen Explanations

### <Special Function Selection Screen>

The Special Function selection screen allows you to switch between major categories by selecting the tabs located on the upper part of the screen.

### <Diagnostic Screen>

The diagnostic screen displays three titles in layer format, informing you what is being implemented on each system. The screen does not allow you to switch systems by selecting the upper title areas.

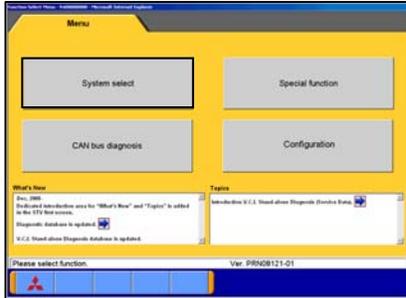

# Basic Flow to Start Diagnosis

## 3-3. Basic Flow to Start Diagnosis

### 3-3-1. Basic Flow of System Select Diagnosis

(1) STV Top Menu

Press **System Select** button on the STV Top Menu screen.

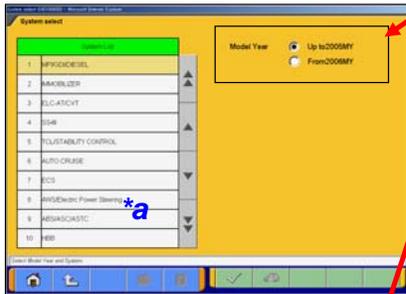

(2) System Selection Screen

Select either one of **“Up to 2005MY”** or **“From 2006MY”** for the Model Year of the vehicle you are diagnosing.

Then follow the each operation below.

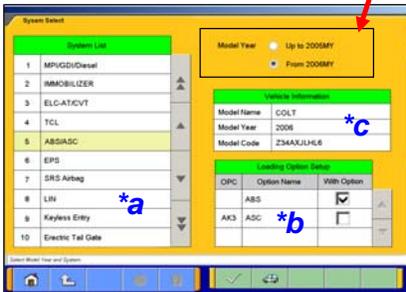

❖ When selecting “Up to 2005 MY”

1. Select a system on the System List (\*a), and press  button.
2. If the system has a loading option, the Loading Option Setup list (\*b) will be displayed. Then, select an item having a box checked (✓) and press  button.

❖ When selecting “From 2006 MY”

1. Confirm the contents of the Vehicle Information list (\*c).  
-When the contents are not describing the vehicle, press  to correct the information. (For details, refer to 3-3-2)
2. Select a system on the System List (\*a), and if the Loading Option Setup list (\*b) is displayed, select an item having a box checked (✓). Then press  button.

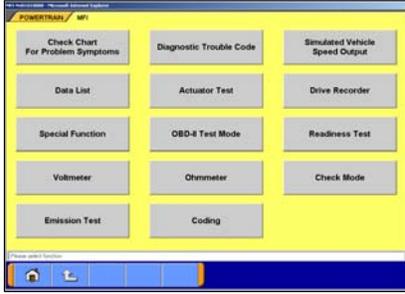

Note:

-If the engine is OBD, the check code appears.

-When you select **“MFI”**, **“ELC-A/T”** or **“CRUISE CONTROL”** system, a selection screen appears asking whether MITSUBISHI or Chrysler. Select a button that the engine belongs to.

## Basic Flow to Start Diagnosis

[ MFI's Function Selection menu ]

### (3) Function Selection Screen

After System selection, the Function selection menu of the selected system appears. Select a button that you want to perform.

In the picture on the left shows the screen appears when the MFI system, which is a representative example, is selected. Details of each buttons are as follows.

Note:

As available functions differ between systems, there might be functions that will not appear when you select other system.

**Check Chart For Problem Symptoms** --To view the Symptom Chart of Service Manual.

**Diagnostic Trouble Code** --To read out or erase Diagnosis Trouble Codes from vehicle ECU.  
Also, you can read out the Freeze Frame data. (refer to 4-1.)

**Simulated Vehicle Speed Output** --To transmit simulated vehicle speed signal into the vehicle.

**Data List** -- To read the RAM data inside the ECU and displays the data in digital and graphic form.  
(refer to 4-2.)

**Actuator Test** --To control the ECU output device. (refer to 4-3.)

**Drive Recorder** --To record, display or analyze the ECU input / output signals which can be viewed using Data List function. (refer to Chapter 6)

**Special Function** --To execute special functions specific to the selected system. For detailed operation other than Chapter 5, please utilize each Online Help function.

**OBD-II Test Mode** --To read out "Monitoring test results" "Provisional DTC" and "ECU information", which are regarding Emission Related System, from ECU.

**Readiness Test** --To read out the result of Readiness Test from ECU.

**Voltmeter** -- To measure voltage value using M.U.T.-III. (same operation as 12-3-2)

**Ohmmeter** -- To measure resistance value using M.U.T.-III. (same operation as 12-3-2)

**Fuel Pressure Gauge** --To measure fuel pressure using a pressure gauge, and display the result on PC screen. (same operation as 12-3-1) (Not Available in US)

**Check Mode** --To shorten sampling time of communication by changing the communication method between M.U.T.-III and ECU. This function is available in Data List, Drive Recorder, Actuator Test and Special Function.

**Emission Test** --To test the Evaporative Emission Control System of the vehicle.

**Coding** -- To write the vehicle equipment specifications into ECU. (refer to Chapter 8)

**SWS monitor** (appears only when selecting "SWS" system) (refer to Chapter 7)

**Pulse Check** (appears only when selecting "SWS" system)  
--To confirm existence of the signal pulse to operate remote system on SWS communication line.

## Basic Flow to Start Diagnosis

### 3-3-2. Vehicle Information Setting

Pressing  button, on System Selection Screen or other vehicle-confirmation screen, displays the Vehicle Information Setting Screen. This screen allows you to modify the diagnosing vehicle information.

#### (1) Vehicle Information Setting Screen

-Currently selected information is displayed in each item's field. (Blank space means the information is not selected.)

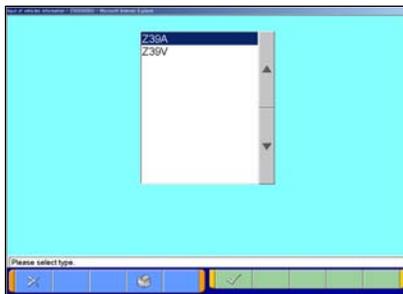

-**VIN** is a compulsory input.

 --OK (Returns to the screen on which  was pressed)

 --Deletes whole information

 --Displays history of settings as open options.

Press an item button to modify. --to (2)

#### (2) The item's individual selection screen appears.

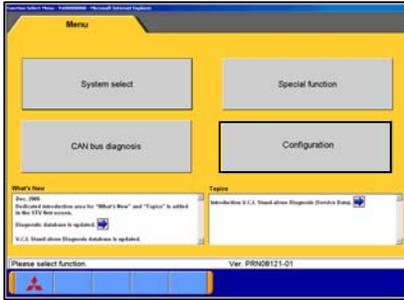

Apply appropriate information, then press  to return to the Vehicle Information Setting screen (1).

# Option Settings

## 3-4. Option Settings

### 3-4-1. Edit Option Settings

- (1) Press **Configuration** button on the STV Top Menu screen.

- (2) Select a button corresponding to your purpose.

#### [ Environment ]

**Change Environmental setting**--To set the driver, which the Service manual data should be installed.

**Show environmental setting**--To view the settings.

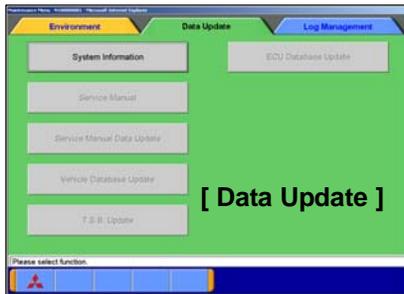

**Unit set**--To select US unit or metric unit, e.g. lbs : kg

**Printer set**--To set output conditions of the printer. (3-4-2.)

**Keyboard set**--To select row of keys: Alphabetical-order or QWERTY-order.

**Select Language for display**--To select a language displayed in whole M.U.T.-III system.

#### [ Data Update ]

**System Information**--To view versions of installed software on the PC.

Note:

Pressing  returns the screen to the STV Top Menu.

### 3-4-2. Set up Output conditions of Printer

- (1) When pressing the **Printer set** button on 3-4-1(2), the "Printer" window illustrated on the left appears. Select an appropriate printer icon and right-click it to open a pull-down menu; select "Printing Preferences...".

Note:

Set up conditions on this window will not be reflected.

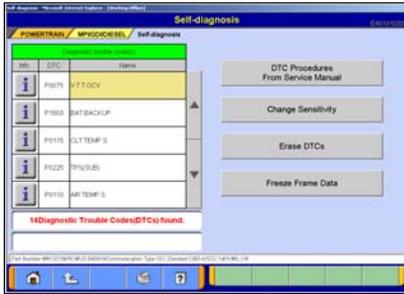

- (2) The "Printing Preferences" window of the selected printer appears. Please set output conditions e.g. page setup, and press **OK** button.

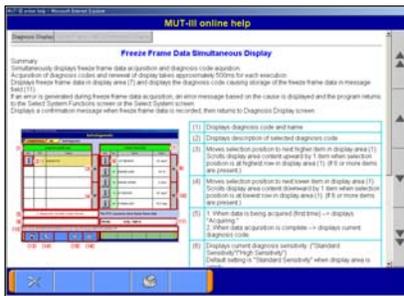

## 3-5. Useful Functions

### 3-5-1. Online Help Function

- (1) The  button on each screen is the online help button for that screen.

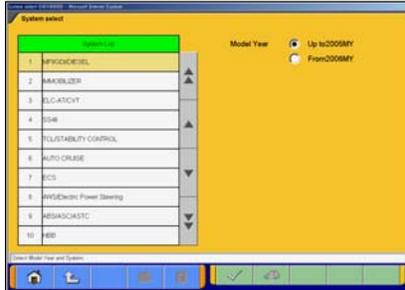

- (2) The online help function allows you to view a general overview of each screen and refer to explanations of the various button functions. If you wish to move the screen up or down, select the applicable scroll button located on the right side of the screen.

## Chapter 4 Diagnosis Function

### 4-1. Diagnostic Trouble Code

#### 4-1-1. Reading and Erasing Diagnostic Trouble Code (DTC)

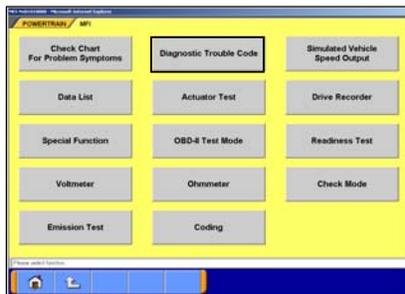

- (1) Select a system that you want to diagnose on the System Selection screen. (For instruction on how to select a system, refer to 3-3-1)

- In the explanation that follows, the method is explained using the MFI system as a representative example.

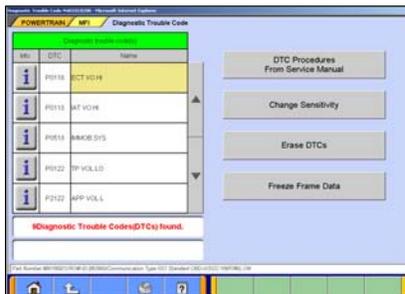

Note:

If the engine is OBD, a check code appears.

- (2) Press **Diagnostic Trouble Code** button.

The system automatically communicates with the vehicle ECU and obtains the diagnostic trouble codes (DTCs).

- (3) Diagnostic trouble codes (DTCs) of the selected system, which is currently stored in the vehicle ECU, are listed.

#### **DTC Procedures From Service Manual**

--Switches the mode to interactive fault diagnosis mode.  
(Not Available in US)

#### **Change Sensitivity**

--Allows you to increase the diagnostic code detection capability of the ECU or return the sensitivity level back to normal.

#### **Erase DTCs**

--Deletes the diagnostic trouble codes.

#### **Freeze Frame Data**

--Displays the Freeze frame data.

# Data List

## 4-2. Data List (Service Data monitor)

### 4-2-1. Display of Data List

#### (1) Displaying Text style

Press **Data List** button on the screen 4-1-1(2), and the left screen will be displayed.

-- Select item -- to 4-2-2(1).

-- 4items/4Graphs display -- to (2)

-- 4items/View Graph (overwrite) --to (3)

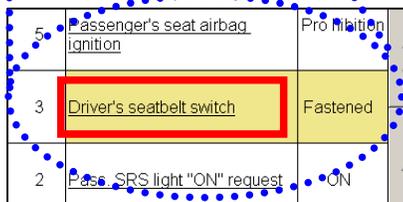

-- Displays "Data List Reference Table" of Service Manual to view normal value.

(Not available in US)

### Data List Item Name

(Explanation for the meaning of underline)

- There are items among data list whose name are underlined. The underlines of these items mean that support for these items depends on configuration of vehicle equipment. When a vehicle has a particular part and related data list item is supported, you can check its value on M.U.T.-III.

- However, when the data list item is underlined, there are also vehicles that do NOT have this part. In this case, even if the data list item is displayed on M.U.T.-III, it is not supported and value will not change.

- So please consider the above when dealing with similar data list items during vehicle inspection and service work.

#### Note:

- For example, there is a data list item "Driver's seatbelt switch" in a M.U.T.-III screen shot below. This item is underlined and means that some vehicles do not have related switch and value will not change. In this case you need to check if the vehicle is equipped with the switch before proceeding with trouble shooting.

## Data List

---

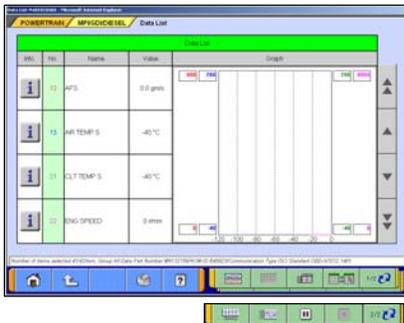

### (2) Displaying Graphs 1

The graph screen displays the data of 4items/4graphs.

-  -- 4items/4Graphs display
-  -- 4items/View Graph (overwrite)
-  -- View Text
-  -- View1/2
-  -- Change Time Scale
-  -- Change Data Scale
-  -- Pause -- to 4-2-2(2)
-  -- Start
-  -- View2/2

Note:

Record Data (  button allows you to save the portion of Data List displayed on the graph)-- Refer to 4-2-2(2)

### (3) Displaying Graphs 2

The data of displayed items are overlaid on a graph.

Available function buttons are the same as Graph 1.

# Data List

## 4-2-2. Details of Data List Screen

### (1) Displaying Item Selection

- Item Group Select  
Select a group of the data to be displayed, and press  button.

- Item Select  
By default, none of the items are selected. Select an item that you wish to display, and apply the selection using  or  buttons.

- Inserts all the items from "Available item list" into the selection areas of "Selected item list."
- Inserts the item selected in "Available item list" into the selection area of "Selected item list".
- Inserts the item selected in "Selected item list" into the lowermost area of "Available item list".
- Inserts all the items from "Selected item list" into the lowermost areas of "Available item list."
- Changes the order in which the items are displayed in the "Selected item list" and the "Available item list," in the sequence of default setting.

When complete the selection, press  button.

Note:

- When there is no selected item, all items are displayed.
- The column of item No appears in green when the service data is OBD basic item.
- \* V.C.I.-Lite does not support "Voltage" and "Fuel pressure".

### (2) Record Data

- (a) Graph data is paused by pressing  button, and the data can be saved on the PC automatically.

- OK -- to (b)
- Cancel (not save the data and return to the pause screen. Pressing  button starts data list again.)

- (b) The data has been saved.

The file name of the recorded data is set as "SD + YearMonthDay + Time (military time including seconds)", using the PC time as standard.

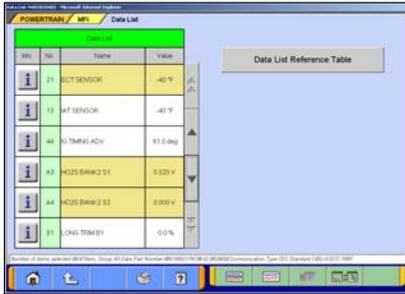

- OK

Note:

For details on how to view the saved data, refer to 6-2-2(3).

## Data List

### (3) Changing Item Display Order

- On the data list display screen, you can change the display order of the items. The change is possible for both text display and graph display.
- The display order change can be performed with the data list displayed continuously. (The graph display is reset.)
- Selecting the name display area of an item fixes the item. Then over-scrolling only the items not selected using the vertical scroll keys changes the order.
- The selection can be released by selecting the item again.
- The function is not activated while a data range display area is selected. (Selection, release, and scroll functions of item are not available.)

### (4) Data Range Change

- Select a data range display area on the graph.
- When the color of the selected area turns into yellow, you can enter values.
- Entering method: Use PC keyboard or scroll keys.
- When use PC keyboard, enter a value, and then press the [Enter] key or release the selection of the data range display area to determine the data range change.
- When the scroll keys, ▲ and ▼, on the screen are used for the data range change, pressing the ▲ key each time changes the data range setting by +5 % of full scale and the ▼ key changes it by -5 %. The change is determined at each key pressing.

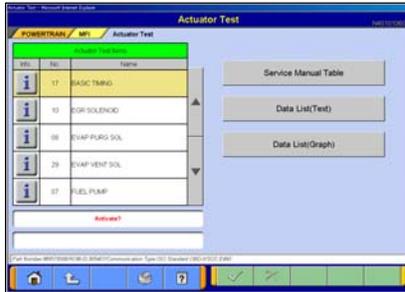

# Actuator Test

## 4-3. Actuator Test

Press **Actuator Test** button on the screen 4-1-1.(2), then go to 4-3-1 or 4-3-2 to proceed, according to the type of the screen, A or B.

### 4-3-1. Actuator Test (Type A)

If the screen illustrated on the left appears....

- (1) Select a test item and press button to activate actuator.

--Displays "Actuator test Reference Table" of Service Manual. (Not Available in US)

--Data List simultaneous display (Text)

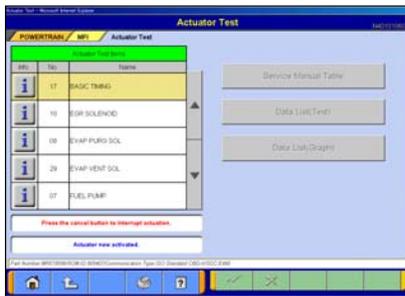

--Data List simultaneous display (Graphs)

- (2) Actuator Test Executing

If you want to interrupt Actuator Test, press button.

When completes the test, a dialog box appears.

Press button. → returns to screen (1).

- Data List simultaneous display (Text)

Refer to (1)(2).

--Select items for Data list display  
(For details how to select items, refer to 4-2-2 (1).)

- Data List simultaneous display (Graphs)

Refer to (1)(2).

--Select items for Data list display  
(For details how to select items, refer to 4-2-2 (1).)

--Change Time Scale

--Change Data Scale

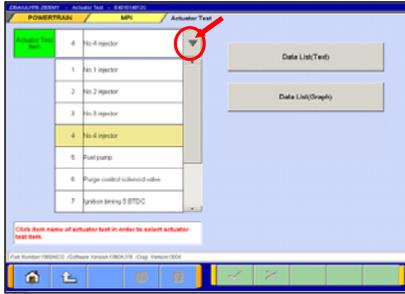

# Actuator Test

## 4-3-2. Actuator Test (Type B)

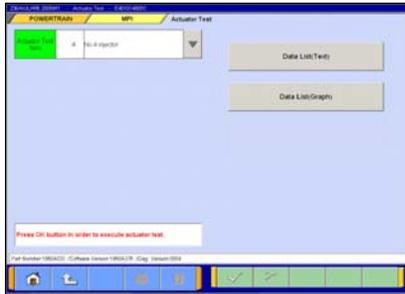

If the screen illustrated on (2) or (3) appears....

- Press  button located next to item name, and select a test item from the pull-down menu.  
 -When the selected item has no parameters -- to (2)  
 -When the selected item has parameters -- to (3)

-  --Data List simultaneous display (Text)
-  --Data List simultaneous display (Graphs)

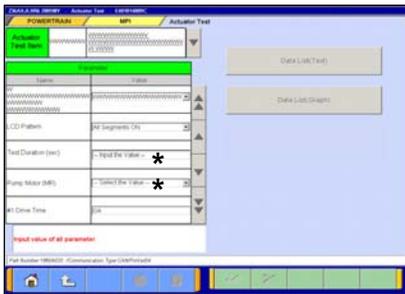

- Press  button to execute Actuator Test. -- to (4)

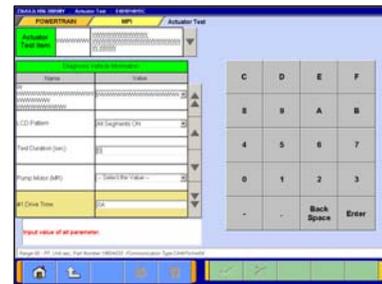

In case selected item has no parameter

- The test item that you have selected need to be set some parameters. After completes the parameter setting, press  button to execute the Actuator Test. -- to (4)

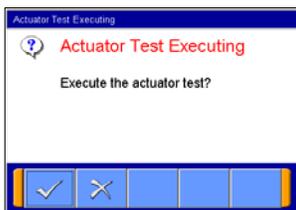

- \* "--Select the Value--" : Select the value from the pull-down.
- \* "--Input the Value--" : Input the value using hexadecimal keys appeared by clicking the input box.

In case selected item has parameters

- Confirmation dialog box appears.  
Press  button

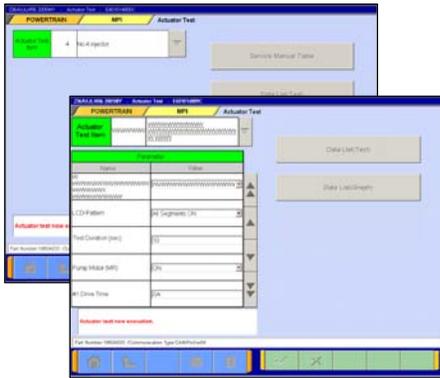

# Actuator Test

## (5) Actuator Test Executing

If you want to interrupt the Actuator Test, press  button.

When completes the test, a dialog box appears.

Press  button. → returns to screen (2) or (3).

## ■ Data List simultaneous display (Text)

Refer to (1)-(5).

 --Select items for Data list display

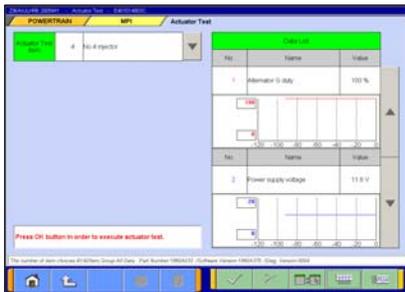

## ■ Data List simultaneous display (Graphs)

Refer to (1)-(5).

 --Select items for Data list display

 --Change Time Scale

 --Change Data Scale

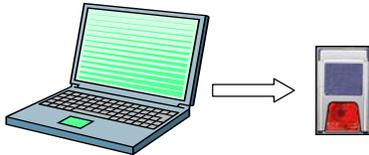

## V.C.I. Stand-alone Diagnosis

### 4-4. V.C.I. Stand-alone Diagnosis

(Not supported by V.C.I.-Lite)

This function allows you to read out DTCs by V.C.I. alone, without carrying PC or USB cable into the vehicle, using a memory card which is storing a diagnostic data transferred from PC.

Once 4-4-1 has been performed, you should proceed just 4-4-2 operation until a new database will be distributed.

#### 4-4-1. Data transfer to memory card

Transfers the data in hard drive to a memory card.

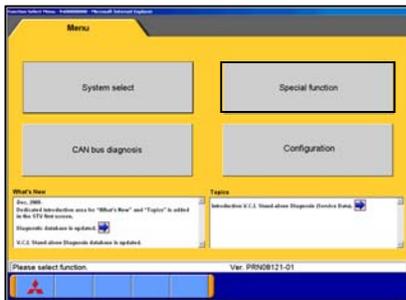

Please perform this operation after every update of the database for V.C.I. Stand-alone diagnosis.

- (1) Insert the memory card (MB992228) into the card adaptor (MB991939), and then insert them into m-card slot on PC.

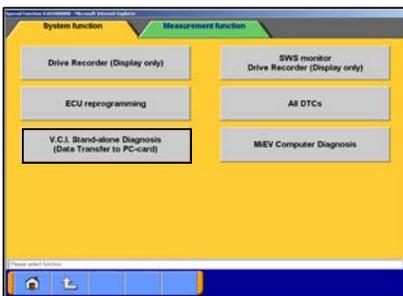

Note:

If you use the same memory-card as using for ECU reprogramming, it may take time to display the next step after selecting [1.Diagnosis] on V.C.I. LCD menu. (refer to 4-4-2(2)).

- (2) Press **Special Function** button on the STV Top Menu.

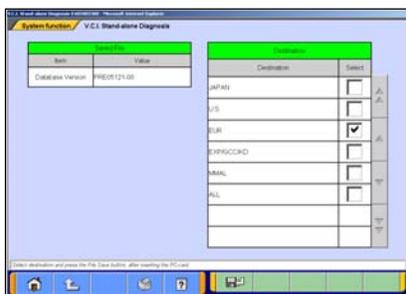

- (3) Select **System Function** tab, then press **V.C.I. Stand-alone Diagnosis** button.

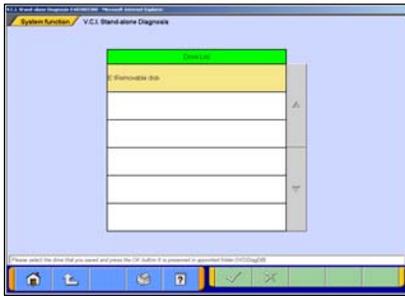

- (4) The version of current data for V.C.I. Stand-alone Diagnosis is indicated on the left table.

Please select a destination having a box checked () on the right table, then press to transfer the data.

## V.C.I. Stand-alone Diagnosis

- (5) Drive Selection  
Select the appropriate drive (removable disk drive) to save the data, then press  button.  
Data transfer takes about 5 minutes at Windows XP and Windows Vista.

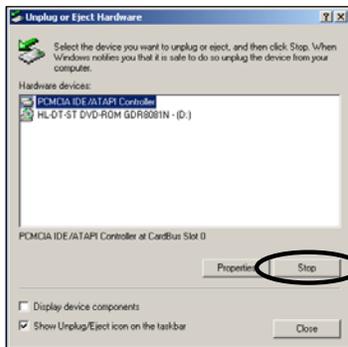

- (6) The data has been saved.  
Press  button.

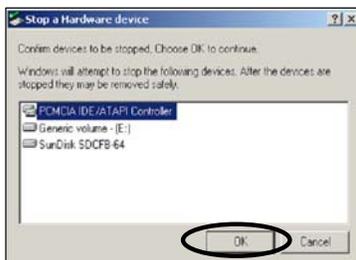

Double click here

- (7) Before you remove the memory card, double-click the icon for removal of adaptor displayed on the bottom-right corner.

- (8) Select [PCMCIA IDE/ATAPI Controller] or the other appropriate device, then press  button.

- (9) Verify the contents of the selection, then press  button.

- (10) After displayed the message "The device can now be safely removed from the system", push the lever on the side of PC m-card slot and remove the memory card.

Caution:

Do not remove the memory card away unless complete above method or turn off the PC.

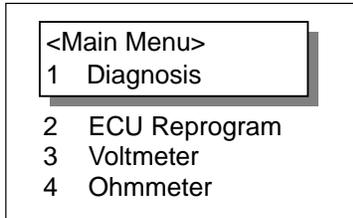

## V.C.I. Stand-alone Diagnosis

### 4-4-2. Reading DTCs by V.C.I. stand-alone

- (1) Insert the memory card, which is storing V.C.I. Stand-alone diagnosis data, into the card adaptor, then insert them into V.C.I. main unit.

Connect the V.C.I. main unit and the diagnosing vehicle with an appropriate main harness securely.

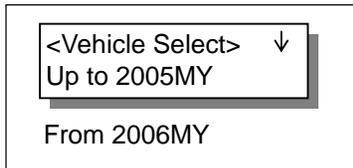

- (2) Turn the V.C.I. power ON, and the V.C.I. LCD screen displays the Main Menu as illustrated on the left.

Confirm that "**1. Diagnosis**" is displayed, then press (Enter) button.

Note:

-If the memory card stores no data, the above Main Menu will not be displayed.

-If the V.C.I. is set on Drive Recorder mode, the LCD displays Drive Recorder menu screen (refer to 6-1-1(18)). Please cancel the Drive recorder mode.

- (3) Press button to browse the list until the LCD displays the appropriate category for the vehicle you are diagnosing, then press (Enter) button.

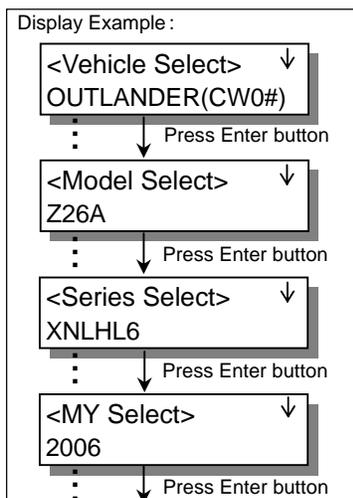

-When selecting "**Up to 2005 MY**" -- Go to (5)

-When selecting "**From 2006 MY**" -- Go to (4)

Note: <Common operations for (3)-(7)>

- The display scrolls in the direction of the arrow displayed on the first line. To switch the direction, press (Esc) button once.

- If you press (Esc) button twice in quick succession, the screen goes back to the Main Menu.

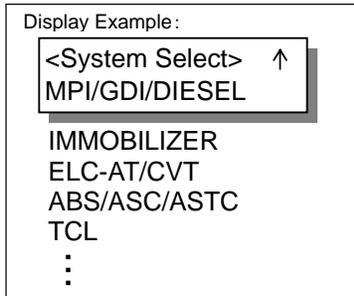

- (4) As next 'Vehicle Select' menu is displayed, press button to browse the list until the LCD displays the vehicle name, then press (Enter) button.

After vehicle selection, 'Model Select', 'Series Select', and 'Model Year Select' follow the LCD menu. Perform each selection in the same operation. --> Go to (6)

Note:

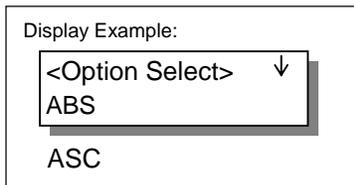

-The options are displayed in alphabetical order.

## V.C.I. Stand-alone Diagnosis

### (5) System Selection

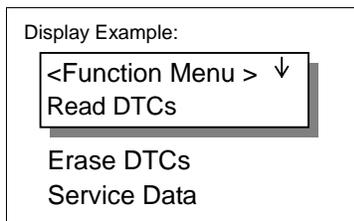

Press  button to browse the list until the LCD displays the system you want to diagnose, then press  (Enter) button.

### (6) Option Selection

If the system has a loading option, the 'Option Select' menu will be displayed. (If not, go to (7) directly)

Select an option, then press  (Enter) button.

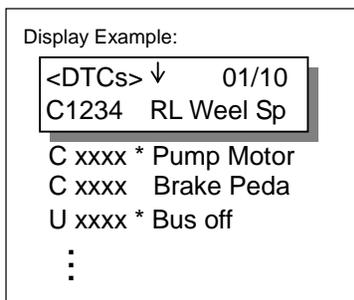

### (7) Function Selection

Select a function, then press  (Enter) button.

Read DTCs -- Display of the DTCs (to (8))

Erase DTCs -- Erase of the DTCs (to 4-4-3)

Service Data -- Display of the Service Data (to 4-4-4)

### (8) Display of the DTCs

The DTCs that have been read from ECU are displayed.

-The number shown on the right edge of first line is indicating [Serial # / Total number of detected DTCs].

-Press  button to display the next DTC.

(When having only one DTC, the arrow is not displayed on the first line.)

-V.C.I. is constantly reading DTCs and updating the display.

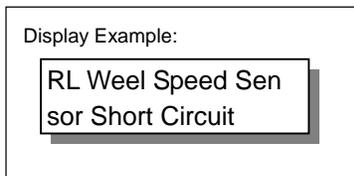

-If the system supports status recognition, current status of each DTC is expressed by the following symbols, which appears between code and name.

```

[ Active   : [ ] (blank) ]
[ Stored   : [*] ]
    
```

-Pressing  (Enter) button shows full name of the DTC.

(To return to the previous screen, press  or  once.)

## V.C.I. Stand-alone Diagnosis

### 4-4-3. Erasing DTCs by V.C.I. stand-alone

(1) Press  (Enter) button.

Display Example:

Press Enter  
to Erase DTCs

(2) Press  (Enter) button, returns to (1).

Display Example:

Erase DTCs  
Complete!

#### NOTE:

The following systems, which need special process to read DTCs, are out of target for the V.C.I. Stand-alone diagnosis.

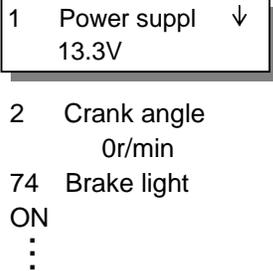

- Some of ABS for MIRAGE / LANCER(CMO/CLO#)
- SWS for GRANDIS(NA4W) / COLT(Z20#)

### 4-4-4. Display of the Service Data

The Service data read from ECU is indicated.

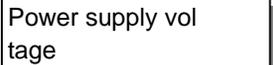

- Press  button to browse the list until the LCD displays the next code.
- Always data is read from ECU and a screen is renewed.

Display Example:

1 Power suppl ↓  
13.3V  
2 Crank angle  
0r/min  
74 Brake light  
ON  
⋮

- Pressing  (Enter) button shows full name of the item.  
(To return to the previous screen, press  or  once.)

Power supply vol  
tage

### 4-4-5. Troubleshooting of V.C.I. Stand-alone Diagnosis

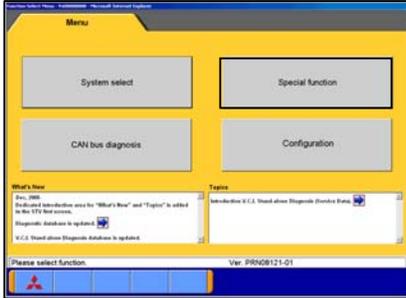

Those contents have moved to 14-3.

# All DTCs

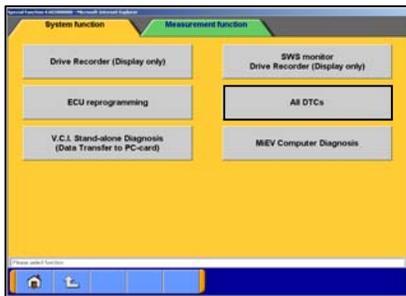

## 4-5. All DTCs

### 4-5-1. Reading and Erasing All DTCs

- (1) Press **Special Function** button on the STV Top Menu.

- (2) Select **System Function** tab, then press **All DTCs** button.

- (3) Select a button corresponding to your purpose.

#### **Read all DTCs**

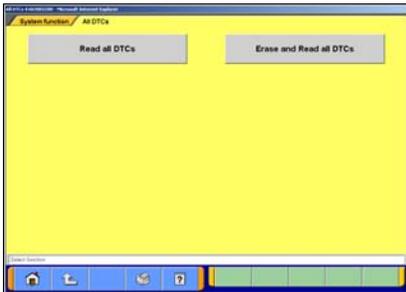

--Displays a list of all DTCs read from vehicle ECU.

#### **Erase and Read DTCs**

--Erases DTCs from system to system, and displays a list of all DTCs read from vehicle ECU.

Note:

- DTCs that failed to be erased are displayed on the list.
- DTCs that take time to detect after being erased will not be displayed.

- (4) System Selection

Select either one of “**Up to 2005MY**” or “**From 2006MY**” for the Model Year of the vehicle you are diagnosing. Then follow the each operation below.

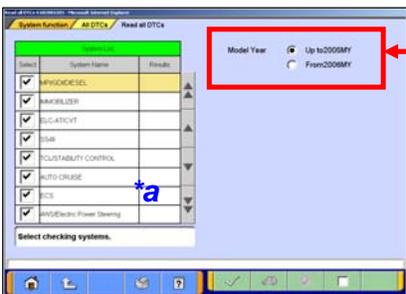

#### ✧ **When selecting “Up to 2005 MY”**

The System List (\*a) appears on the screen.

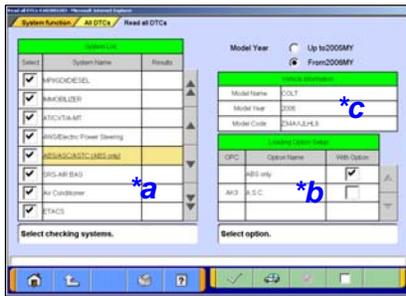

-All the systems are selected by default.

-Select systems to read DTCs having the box checked (✓), then press **✓** button.

(Clicking the box deletes the ✓ mark)

## All DTCs

### ◇ When selecting “From 2006 MY”

The System List (\*a) and the Vehicle Information list (\*c) appear on the screen.

1. Confirm the contents of the Vehicle Information list (\*c).  
-When the contents are not describing the vehicle, press to correct the information. (refer to 3-3-2)
2. Select systems to read DTCs having the box checked (✓), and its option if necessary, then press button.

### System List (\*a)

- All the systems are selected by default.
- Clicking a box deletes the ✓ mark.
- System, which has loading options to be chosen, is indicated by underlining the name.  
“system name (**Select Option!**)”: Not chosen  
“system name (option name)”: Has been chosen
- Systems to read DTCs must have completed the loading-option selection.

### Loading Option Setup list (\*b)

- Only displayed when the column of the system, which has loading-options to be chosen, is being selected (appearing in yellow color) on the System List (\*a).
- When this list appears, select an appropriate option having the box checked (✓).

### Note:

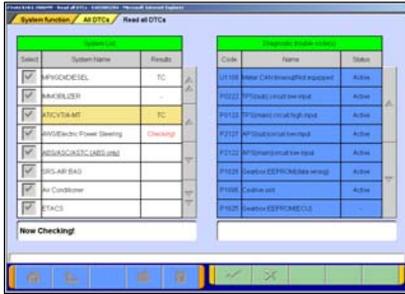

- button -- Sets all systems selected on System list.
- button -- Sets all systems unselected on System list.
- Deleting ✓ marks on systems, which are not installed in the vehicle, will shorten the processing time.
- It is no problem if a system, which is not installed in the vehicle, is selected.

### (5) Confirmation dialog box appears.

Press button

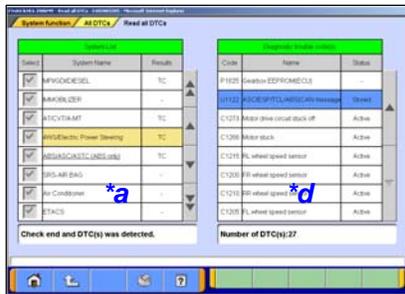

## All DTCs

(6) DTCs checking

(7) DTCs checking are complete.  
Press  button.

(8) Results

### System List (\*a)

-Indicates presence or absence of DTCs on the results field as below.

- “OK”: DTCs are not detected
- “TC”: DTCs are detected
- “- ”: Unchecked (out of the check system)  
Not equipped or communication error

### Diagnostic trouble code(s) (\*d)

-All detected DTCs are listed.

-Indicates status of the DTCs as below.

- “Active”: The trouble occurs currently
- “Stored”: The trouble had occurred in past
- “- ”: Not supporting status recognition

-When selecting a system with “TC” result on the System List (\*a), columns of corresponding DTC on the Diagnostic trouble code(s) (\*d) will appear in blue color.

Pressing  button returns the screen to (3).

### NOTE:

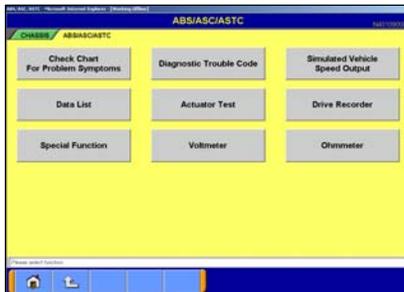

The following systems, which need special process to read DTCs, are out of target for the All DTCs diagnosis.

- Air Conditioner for GRANDIS(NA4W)
- SWS for DIAMANTE(F30/40#)

## Chapter 5 Special Function (Calibration & Setting)

### 5-1. ECU Information

#### 5-1-1. Displays ECU Information (KWP2000 on CAN only)

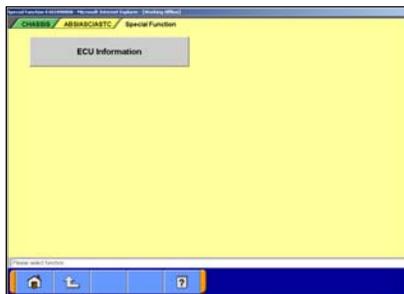

- (1) Function Select

Select a system on the System Selection screen.

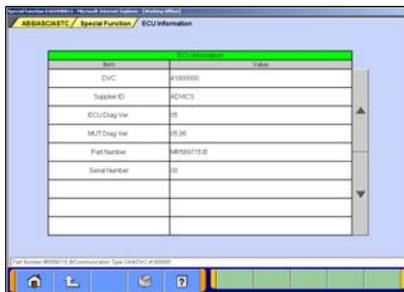

(For instruction on how to select a system, refer to 3-3-1)

Then press **Special Function** button on Function selection menu of the selected system.

- (2) Special Function menu Select

Press **ECU Information** button.

- (3) The table of ECU Information appears.

### 5-2. Learned Value Reset

#### 5-2-1. Learned Value Reset

- (1) Special Function menu Select

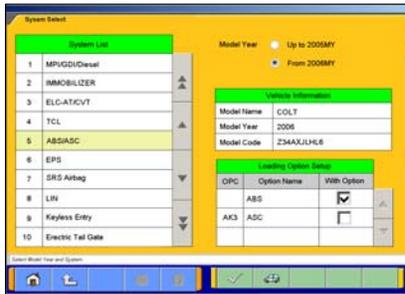

Press **Learned value reset** button.

- (2) Select a reset item, and press  button.

# Seat Weight Sensor Accuracy Check

## 5-3. Seat Weight Sensor Accuracy Check

### 5-3-1. Seat Weight Sensor Accuracy Check

- (1) Function Select

Select “**SRS-AIR BAG**” system on the System Selection screen.(For instruction on how to select a system, refer to 3-3-1)

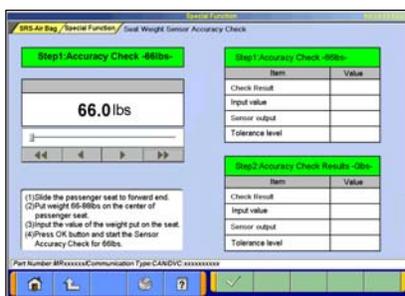

- (2) Function Select

Press the **Special Function** button.

- (3) Function Select

Press the **Seat Weight Sensor Accuracy Check** button

- (4) Step1: Accuracy Check –66lbs-

Slide the passenger seat to forward end.

Put 66-88lbs weights on the center of the seat.

Input the value of the weight put on the seat.

Press  button and start the Sensor Accuracy Check.

Note:

When a result is NG, 5-3-2. is displayed.

- (5) Step2: Accuracy Check –0lbs-

Unload weight and remove friction.

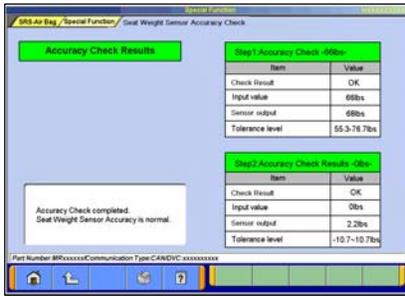

Slide the passenger seat to rear end.

Press the  button and start the Sensor Accuracy Check.

Note:

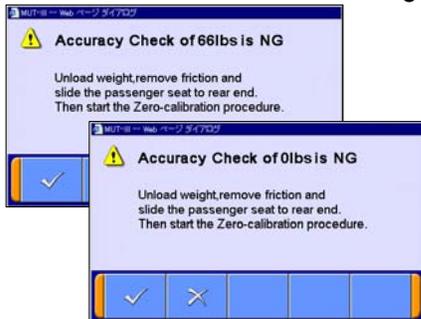

When a result is NG, 5-3-2. is displayed.

# Seat Weight Sensor Accuracy Check

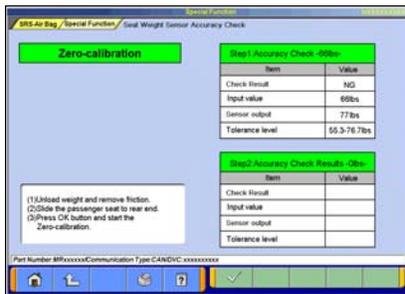

- (6) Accuracy Check Results  
After the Accuracy Check completed normally, the results of each test is displayed.

## 5-3-2. Zero-Calibration

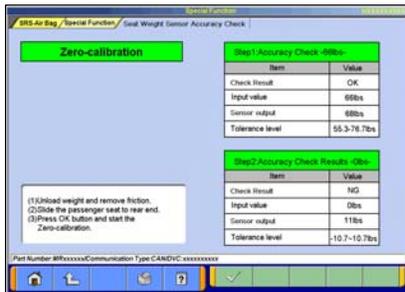

- (1) When the Accuracy Check is NG, the message illustrated on the left will be displayed. Start the procedure for Zero-calibration in order to retry the Weight Sensor Accuracy check

- OK – to (2)
- Cancel – back to 5-3-1.(4) / (5)

(In the case 66lbs check is NG)

- (2) Zero-calibration  
Unload weight and remove friction.  
Slide the passenger seat to rear end.  
Press  button and start the Zero-calibration.

(In the case 0lbs check is NG)

- (3) Zero-calibration Start Confirmation

- Start
- Cancel --back to (2)

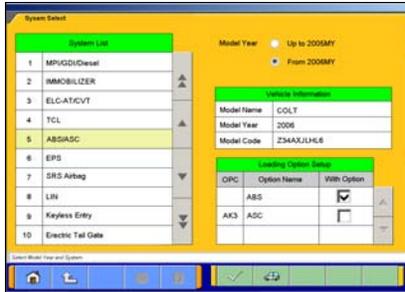

Note:

After the Zero-calibration completed, please retry the Weight Sensor Accuracy check (5-3-1(4)).

# Steering Angle Sensor Calibration

## 5-4. Steering Angle Sensor Calibration

### 5-4-1. Steering Angle Sensor Calibration

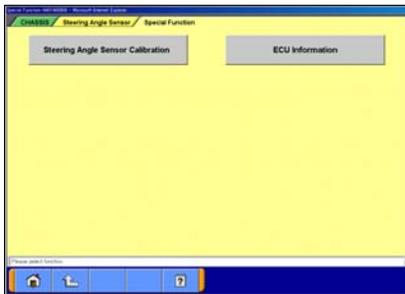

- (1) System Select

Select **“Steering Angle Sensor”** on the System Selection screen. (For instruction on how to select a system, refer to 3-3-1)

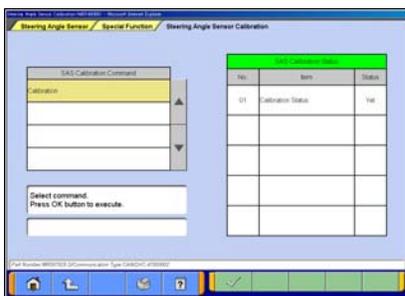

- (2) Function Select

Press **Special Function** button.

- (3) Special Function menu Select

Press **Steering Angle Sensor Calibration** button.

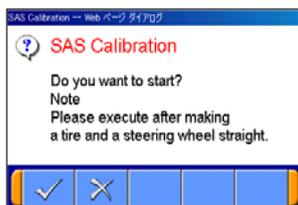

- (4) Steering Angle Sensor Calibration

Select a command item and press  button to execute.

Note:

When the display is “Yet” as the result of status, it is to (5).

When the display is “Done” as the result of status, it is to (7).

- (5) Study Confirmation

 --Start --to (6).

 --Cancel --to (4).

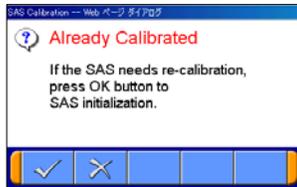

Note:

Please execute after making a tire and a steering wheel straight.

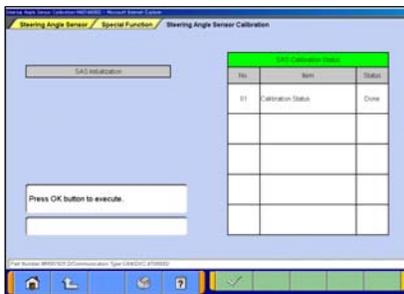

## Steering Angle Sensor Calibration

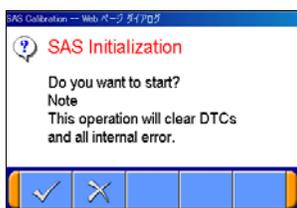

- (6) Study Completed  
 --OK --to (4).

- (7) Re-calibration  
 If the SAS needs re-calibration, press the  button to execute SAS initialization.  
 --Cancel --to (4).

- (8) Initialization  
 Press the  button to execute.

- (9) Clear DTCs Confirmation  
 --Start --to (10).  
 --Cancel --to (8).

Note:

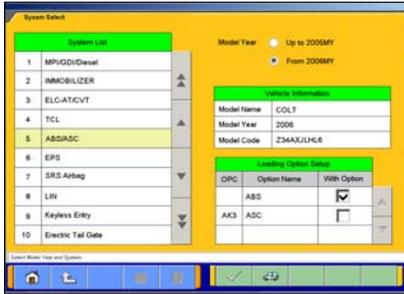

This operation will clear DTCs and all internal error.

- (10) Clear Completed  
 --OK --to (4).

## 5-5. Lateral G Sensor Calibration

### 5-5-1. Lateral G Sensor Calibration

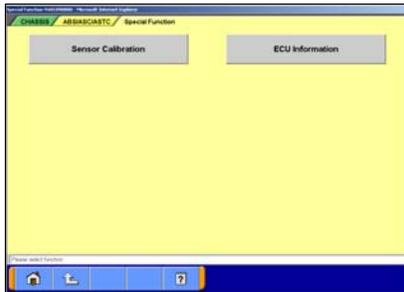

(1) System Select

Select **"ABS/ASC/ASTC"** on the System Selection screen.  
(For instruction on how to select a system, refer to 3-3-1)

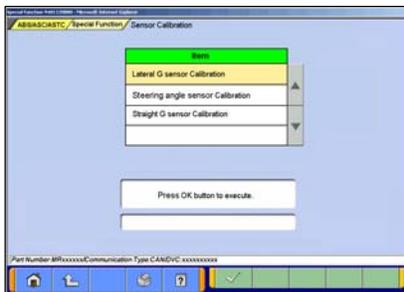

(2) Function Select

Press **Special Function** button.

(3) Special Function menu Select

Press **Sensor Calibration** button.

(4) Execute Screen

Press the  button to execute.

(5) Execute Confirmation

-  --Start
-  --Cancel --to (4).

(6) Lateral G sensor Calibration Completed

-  -- returns to (4).

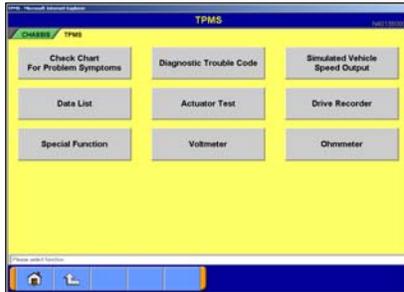

# TPMS ID Registration and Checking

## 5-6. TPMS ID Registration and Checking

### 5-6-1. TPMS Special Function

- (1) System Select  
Select "TPMS" on the System Selection screen.  
(For instruction on how to select a system, refer to 3-3-1)

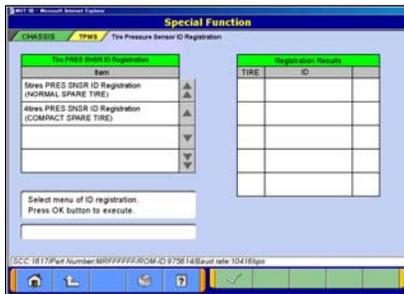

- (2) Function Select  
Press the **Special Function** button.

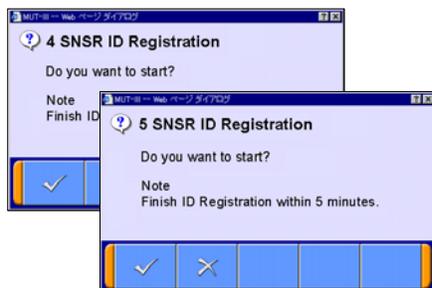

- (3) Function Select  
**Tire Pressure Sensor ID Registration** button -- to 5-6-2.  
**Tire Pressure Sensor ID Check** button -- to 5-6-3.  
**Tire Pressure Sensor Check** button -- to 5-6-4.

### 5-6-2. Tire Pressure Sensor ID Registration

- (1) Select item from the Tire PRES SNSR ID Registration menu, and press  button to execute.

- (2) Registration Execution Confirmation  
 --Start  
 --Cancel -- to (1)  
 Note:  
 Finish ID Registration within 5 minutes.

## TPMS ID Registration and Checking

### (3) Registration Execution

If you want to interrupt the ID Registration, press the button. -- to (4)

When the registration complete, Registration Result will be displayed. Press button. -- to (5)

### (4) Registration Cancel Confirmation

-- OK -- back to (1)

-- NO -- back to (3)

### (5) ID Registration completed.

--OK

### 5-6-3. Tire Pressure Sensor ID Check

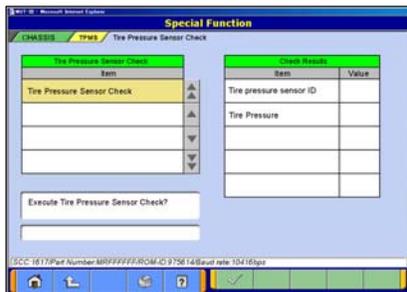

The registered Tire Pressure Sensor ID is displayed.

## TPMS ID Registration and Checking

### 5-6-4. Tire Pressure Sensor Check

- (1) Press the  button to execute.

- (2) Tire Pressure Sensor Check execution Confirmation

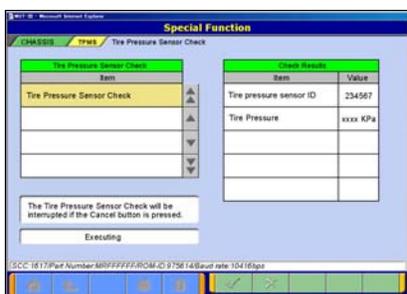

-  --Start
-  --Cancel

- (3) Tire Pressure Sensor Check Executing

If you want to interrupt the Sensor Checking, press the  button. -- to (4)

When the check completed, the result will be displayed. Press the  button. -- to (5)

- (4) Tire Pressure Sensor Check Cancel Confirmation

-  -- OK -- back to (1)
-  -- NO -- back to (3)

- (5) Tire Pressure Sensor Check completed

-  --OK --to (1)

## Chapter 6 Drive Recorder

### 6-1. How to Record the Data

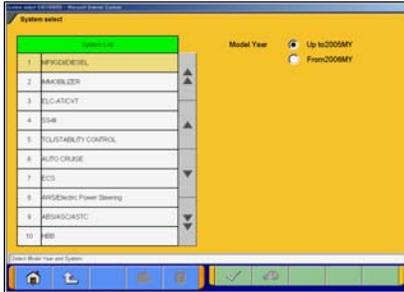

There are two ways for recording the data, "Recording by V.C.I. alone (6-1-1)", and "Recording on PC with displaying data (6-1-2)". Please select one of them and follow the procedure.

#### 6-1-1. Recording by V.C.I. alone

(Not supported by V.C.I.-Lite)

This section describes the operation for recording data using only V.C.I. without connecting to PC. However, drive recorder settings such as items to be recorded or trigger method are configured using PC.

Please connect V.C.I. into PC and the vehicle, and start performing the following steps using PC first.

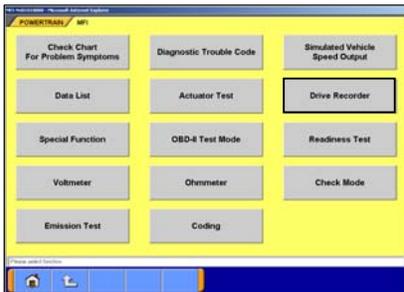

#### (1) System Select

Select a system for which the drive recorder is to be used on the System Selection screen.

(For instruction on how to select a system, refer to 3-3-1)

- The following explanation describes how to set the drive recorder settings of the MFI system as a representative example.

#### (2) Function Select

Press **Drive Recorder** button.

<NOTE>

When a Check Mode button is effective, it's possible to sample in a short interval when it's changed to a check mode.

#### (3) Drive Recorder Function select

Press **Record** button on the Drive Recorder function menu.

Note:

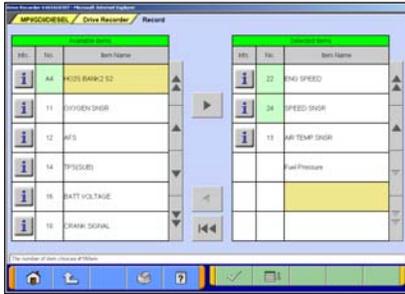

**Data display**-- To transfer the recorded data on the V.C.I. into the PC (Refer to 6-2), or display the data (Refer to 6-3).

#### **Record (Read Setting Conditions)**

--Restore past recording conditions so that you can execute recording under the same conditions as those used with previously recorded data files. (Refer to 6-1-3)

**Data Storing**-- The data saved in a removable disk can be stored into the PC. (Refer to 6-2-2(7))

## How to Record the Data

### (4) Item Select

- Select an item you wish to record and apply the selection using button.

- Inserts the item selected in "Available items list" into the selected area of "Selected items list".
- Inserts the item selected in "Selected items list" into the lowermost area of "Available items list".
- Inserts all the items from "Selected items list" into the lowermost areas of "Available item list".
- Changes the order in which the items are displayed in "Selected items list" and "Available items list", in the sequence of default setting.

- When complete the selection, press button.

Note:

-A maximum of 16 items can be recorded.

### (5) Trigger method / Recording style Select

- Select trigger method and put  mark(s). (Multiple selection)
- Put the  mark on "V.C.I. Drive recorder".
- When complete the selection, press button.

- "Manual Trigger" --Allows you to set the trigger manually. --to (8)
- "Diagnosis Code Trigger" --Applies the trigger when the specified diagnostic code is generated. -- to (6)
- "Threshold Trigger"--Applies the trigger when the condition meets the set threshold. – to (7)

### (6) When "Diagnosis Code Trigger" is selected in (5), the left screen appears.

- Select an item to be the trigger, and press button. --to (8). (If Threshold Trigger is selected as well, go to (7))

## How to Record the Data

(7) When “**Threshold Trigger**” is selected in (5), the left screen appears.

- Select an item and edit conditions in Condition Editing table appearing at the bottom of the screen, first.

### Condition Editing table

“UP/DOWN”: Threshold or higher / Threshold or lower

“Level/Edge”: Matching data / Data as of the time when it turns to be matching from not matching

“AND/OR”:-Data matching with both of this condition and the other one upper row on Condition of Trigger table /  
-Data matching with either of this condition or the other one upper row on Condition of Trigger table

- Then, press Add button to set the condition into selected area of Condition of Trigger table.  
(Condition of Trigger table can include up to 8 conditions.)
- When completed the setting, press button.

(8) Select the V.C.I. recording area on the left list.

Set the sampling interval and rate distributions (before and after trigger) by moving the cursor or by pressing button.

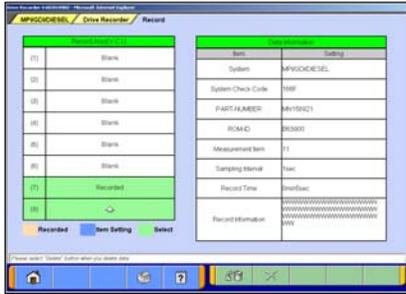

--OK --to (10)

--Display of V.C.I. data --to (9)

Note:

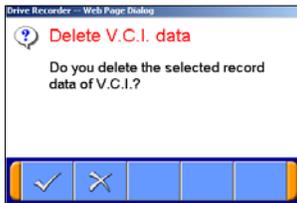

- You can select from eight recording areas.
- It is possible to set consecutive areas as well.
- The sampling interval time indicates the data-recording interval for one item. A setting of 0 seconds results in the fastest sampling interval.
- When a sampling interval other than the fastest interval is selected, the amount of time in which recording is possible appears. This time is a calculated estimated time and may differ from the actual amount.

## How to Record the Data

- (9) View V.C.I. Regeneration Data  
 (a) For the data recorded in the selected V.C.I. recording area, the settings of the items are displayed.

- Deletes data recorded in the V.C.I.  
 Select a data you wish to delete, and press this button -- to (b)  
 -- Cancel -- to (8)

- (b) Delete Confirmation  
 --OK  
 --Cancel

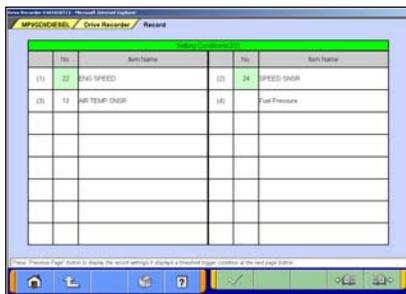

- (10) Enter the record information (memo)  
 Enter the reference information, such as the vehicle model and diagnosed system name.  
 --OK -- to (11)

Note:  
 -As the unit is linked with the PC keyboard, you can enter the information either using the PC keyboard or by using the screen keyboard.

- (11) The contents check of setting (1/3)  
 The list of recording settings appears.  
 --To check set items  
 --To check threshold trigger conditions (if selected)  
 Press button transmits the settings to the V.C.I.-- To (14)

- (12) The contents check of setting (2/3)  
 The list of recording items appears.  
 --To check threshold trigger conditions (if selected)  
 --To check recording setting  
 Press button transmits the settings to the V.C.I.-- To (14)

## How to Record the Data

- (13) The contents check of setting (3/3) (Only if selected in (7))  
The list of Threshold conditions appears.

--To check recording setting

--To check set items

Press  button transmits the settings to the V.C.I.-- To (14)

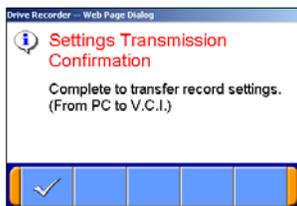

- (14) Transmit Confirmation

By pressing  button on screen (11)/(12)/(13), the record settings are transmitted to V.C.I..

Press  button.

- (15) Once the settings have been transmitted from the PC to the V.C.I., a message appears indicating that the settings have been transmitted. Please wait a second.

- (16) Press  button.

Note:

If you wish to start recording immediately, disconnect the USB cable while leaving the V.C.I. switch ON.

(Disconnecting the USB cable starts to record the data on V.C.I.) -- to (17)

If you wish to just set the settings and later start recording, turn the V.C.I. switch OFF and then disconnect the USB cable.

- (17) Recording

When you record with a manual trigger, connect the trigger harness to the V.C.I. trigger terminal as necessary.

Note:

-When the USB cable is connected, the V.C.I. communicates with the PC, thereby prohibiting drive recorder startup. Do not connect the USB cable.

## How to Record the Data

---

### (18) Starting Recording

To start recording, turn off the engine first, and then turn the ignition switch ON or start the engine and turn the V.C.I. power switch ON. Recording begins after communication initialization.

Note:

-The number in parenthesis on the V.C.I. LCD screen indicates the recording area of the V.C.I. drive recorder.

### (19) Trigger

With a manual trigger, pressing the V.C.I. Enter key activates the trigger, displaying "T" on the screen. Once the trigger has been activated, the data after the time of the trigger are recorded.

Note:

-With a diagnostic trigger, the trigger is automatically activated when the specified diagnostic code is generated.

-With a threshold trigger, the trigger is automatically activated when the specified conditions are met.

### (20) Ending Recording

If you wish to end recording, regardless of whether or not the trigger has already been generated, press the V.C.I. ESC key.

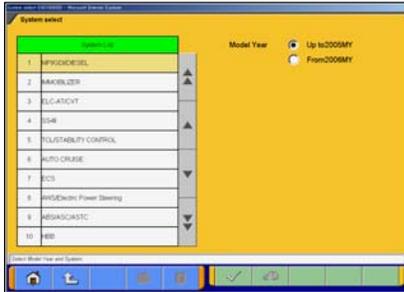

Once the button has been pressed you can disconnect the vehicle harness and trigger harness.

(21) When you check the data recorded in V.C.I. continue to 6-2-1.

## How to Record the Data

### 6-1-2. Recording on PC with Displaying Data

This section describes the operation for saving the data at a file with displaying it as the set up record conditions on PC.

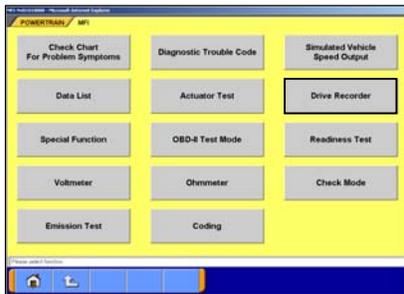

(1) System Select

Select a system for which the drive recorder is to be used on the System Selection screen.

(For instruction on how to select a system, refer to 3-3-1)

- The following explanation describes how to set the drive recorder settings of the MFI system as a representative example.

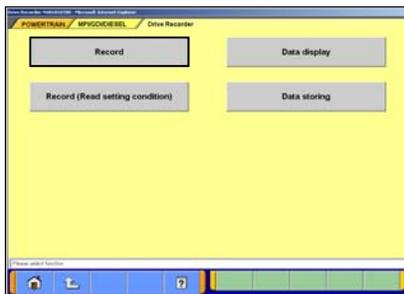

(2) Selection of function.

Press **Drive Recorder** button.

<NOTE>

When a Check Mode button is effective, it's possible to sample in a short interval when it's changed to a check mode.

(3) Press **Record** button on the Drive Recorder function menu.

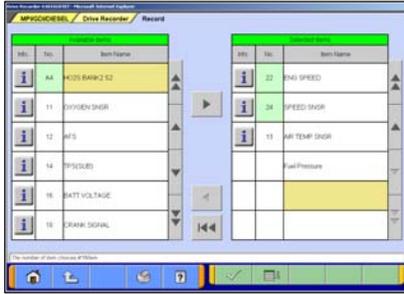

Note:

**Data display** -- Displays the recorded data. (Refer to 6-3) or edit the data (Refer to 6-2-2)

**Record (Read Setting Conditions)** -- Allows you to restore past recording conditions so that you can execute recording under the same conditions as those used with previously recorded data files. (Refer to 6-1-3)

**Data Storing** -- The data saved in a removable disk can be stored into the PC. (Refer to 6-2-2 (7))

## How to Record the Data

### (4) Item Select

- Select an item you wish to record and apply the selection using button.

- Inserts the item selected in “Available items list” into the selected area of “Selected items list”.
- Inserts the item selected in “Selected items list” into the lowermost area of “Available items list”.
- Inserts all the items from “Selected items list” into the lowermost areas of “Available items list”.
- Changes the order in which the items are displayed in “Selected items list” and “Available items list”, in the sequence of default setting.

- When complete the selection, press button.

Note:

-A maximum of 16 items can be recorded.

\* V.C.I.-Lite does not support “Voltage” and “Fuel pressure”

### (5) Trigger method / Recording style Select

- Select trigger method, and put  mark(s). (Multiple selection)
- Put  mark on “PC Drive recorder”.
- When completed the selection, press button.

“Manual Trigger” -- Allows you to set the trigger manually. --to (8)

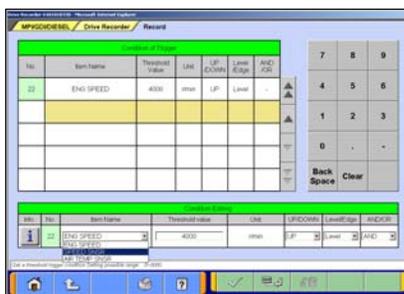

“Diagnosis Code Trigger” -- Applies the trigger when the specified diagnostic code is generated. -- to (6)

“Threshold Trigger” -- Applies the trigger when condition meets the set threshold. – to (7)

### (6) When “Diagnosis Code Trigger” is selected in (5), the left screen appears.

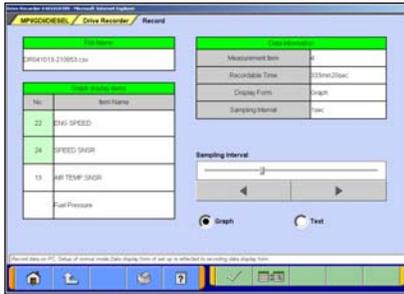

- Select an item to be the trigger, and press button. --to (8). (If Threshold Trigger is selected as well, go to (7))

### (7) When “Threshold Trigger” is selected in (5), the left screen appears.

- Select an item and edit conditions in Condition Editing table appearing at the bottom of the screen. (refer to 6-1-1(7))
- Then, press button to set the condition into selected are of Condition of Trigger table. (Condition of Trigger table can include up to 8 conditions)
- When completed the setting, press button.

## How to Record the Data

### (8) PC Drive recorder setup

- Please confirm the contents of record setting, and set up the sampling interval with the cursor or button.
- Select a display format for recording (either **Graph** or **Text**) having a circle marked “”.

--Displaying item select ('Graph' only)--to (9)

--OK -- to (10)

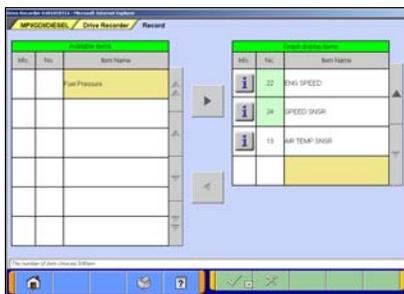

Note:

-The sampling interval time indicates the data-recording interval for one item. A setting of “0 sec” (fastest) results in the fastest sampling interval.

-Recordable time computes the number of the maximum record points as 20000 points, and is displayed. This is the prediction time on calculation and differs from actually recordable time.

-The configuration of the displayed file names is DR+ Year Month Day + Time (military time including seconds), using the PC time. <DR: The file saved by the drive recorder>

-The setting value of a sampling interval can be chosen from 0sec(fastest)/1sec/10sec/1min.

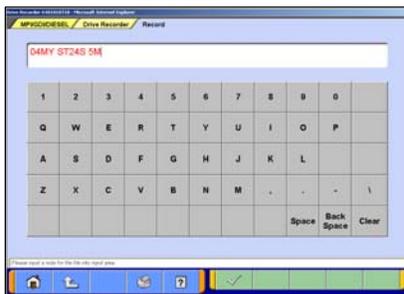

### (9) Graph display item selection

Select the items you wish to display on the graph.

- Selected 4 items are displayed during the recording.
- The items not selected are not displayed on graph but the data are recorded.

-- OK -- to (8)

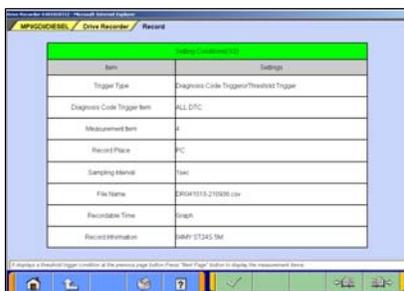

### (10) Enter the record information (memo).

Enter the reference information, such as the vehicle model and diagnosed system name.

--OK -- to (11)

Note:

Because the unit is linked with the PC keyboard, you can enter the information either directly using the PC keyboard or by using the screen keyboard.

### (11) The contents check of setting (1/3)

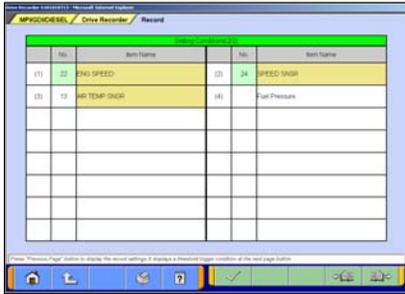

The list of recording settings appears.

--To check set items

--To check threshold trigger conditions (if selected)

Pressing starts recording – go to (14)

## How to Record the Data

(12) The contents check of setting (2/3)

The list of set recording items appears.

--To check threshold trigger conditions (if selected)

--To check recording setting

Pressing starts recording – go to (14)

Note:

When “Graph” is selected in (8), the background color of the name column of the item, which is to be displayed in graph during the recording, changes into yellow.

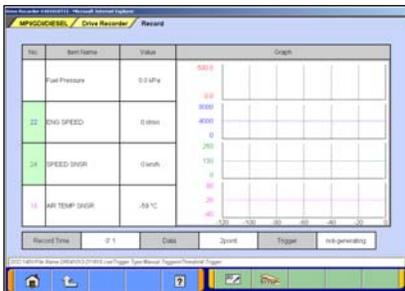

(13) The contents check of setting (3/3) (Only if selected in (7))

The list of threshold trigger conditions appears.

--To check recording setting

--To check set items

Pressing starts recording – go to (14)

(14) Recording Data

[Graph]

It saves at the file, expressing data as the set-up record conditions. The four items chosen on (9) are indicated by graph as the left screen (a).

[Text]

When “Text” was chosen on (8), and a drive recorder is set up, it saves at a file, acquiring and expressing data as the set-up record conditions. (see the left screen (b))

(a). Recording screen [Graph]

(b). Recording screen [Text]

--Data record end --to (15)

When Trigger is not generated during data record, let the point at the time of a record start is time 0:00.0.

--Manual Trigger occurs

However, when Diagnosis Code Trigger or Threshold Trigger are chosen as trigger conditions, suppose that it is invalid.

Note:

-Record is continued until record end button is pushed, even if trigger occurs.

-The availability of the hard disk of the PC is checked after record screen display and before record start. When the availability is 100MB or less, a message is displayed and record is stopped.

-When the number of record data reaches to 20000 points, a message is displayed and record is completed.

## How to Record the Data

---

### (15) Save record data

On the screens of (14), pressing  button ends the data acquisition and saves it, and then displays a dialog indicating completion of the record data saving.

-- OK --To Drive Recorder function select menu screen (Refer to (3)).

### Note:

\*In the case that there is no record data, a dialog is displayed confirming whether to stop the recording.

-- OK -- To the drive recorder function select menu

-- Cancel --To (14) to start recording again.

### (16) When you check the recorded data, **continue to 6-2-2.**

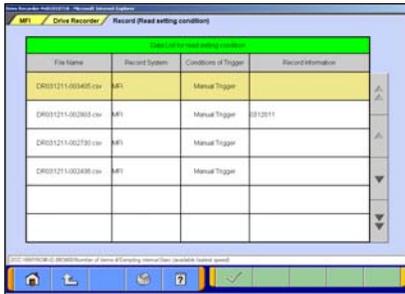

## How to Record the Data

### 6-1-3. Reuse Past Setting Condition

**Record (Read Setting Conditions)** button allows you to restore past recording conditions so that you can execute recording under the same conditions as those used with previously recorded data files.

- (1) Press **Record (Read Setting Conditions)** button on the Drive Recorder function menu. (refer to 6-1-1(3))

- (2) Select the data you wish to restore, and press  button. The data was recorded using V.C.I.: To 6-1-1(8)  
The data was recorded using PC : To 6-1-2(8)

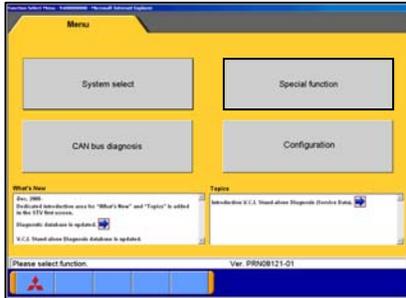

## Recorded Data Handling

### 6-2. Recorded Data Handling

#### 6-2-1. Transmit Data on V.C.I. to PC

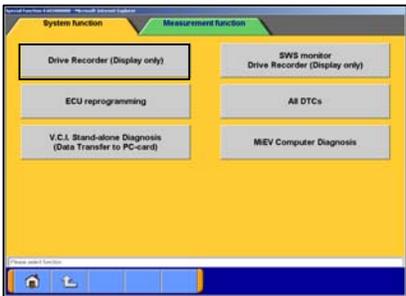

(Not supported by V.C.I.-Lite)

To view the data recorded on V.C.I., you need to transfer it from V.C.I. to PC first. Connect V.C.I. and PC using a USB cable and operate following procedures.

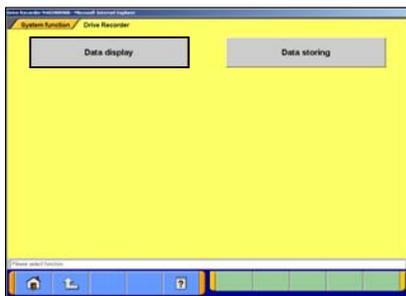

- (1) You can transfer the data using only V.C.I. and PC, without connecting to the vehicle. Press **Special Function** button on the STV Top Menu.--to (2)

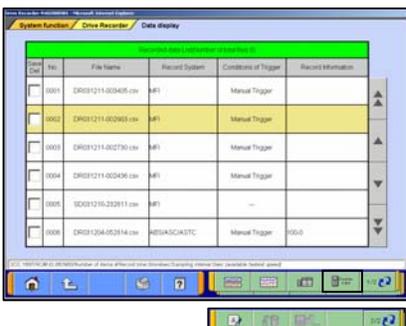

Or, if the V.C.I. is already connected to the vehicle, you can press **Data display** from the function menu of the recorded system to regenerate the data. (Refer to 6-1-1(3)) --to (4)

- (2) Select the **System Functions** tab on the upper part of the screen, and then press **Drive Recorder (Display only)** button.

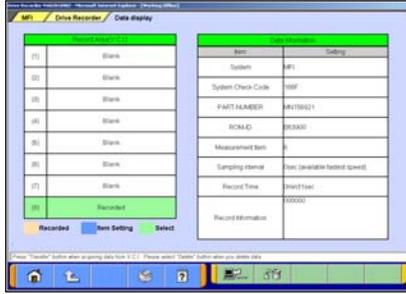

- (3) Press **Data display** button.

- (4) File List  
press **Display Data** button.

## Recorded Data Handling

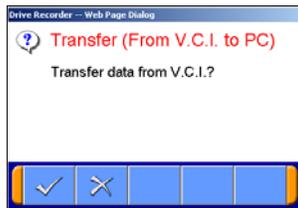

### (5) Display of V.C.I. Data

The status of V.C.I. recording area is displayed.

Select a data to be transferred into PC, and press  button --to (6)

When you wish to delete a data, select it and press  button.

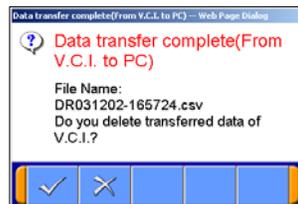

### (6) Transfer Confirmation

Press  button.

### (7) The data is being transferred from V.C.I. to PC.

Please wait for a while.

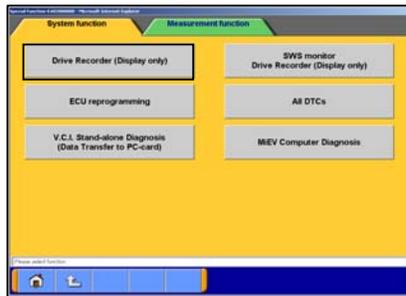

### (8) After completion of data transfer, a dialog box appears asking whether to delete the data on V.C.I..

 : Deletes the data, then returns to screen (5).

 : Returns to screen (5) without deleting the data.

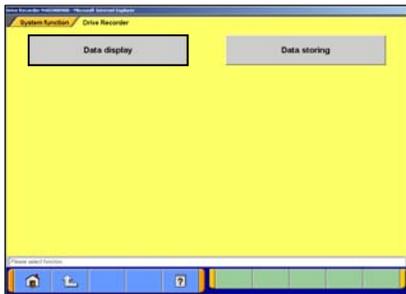

## Recorded Data Handling

### 6-2-2. Data Edit Functions

- (1) Press **Special Function** on the STV Top Menu. Then select **System Functions** tab on the upper part of the screen, then press **Drive Recorder (Display only)**.

Or, if V.C.I. is already connected to the vehicle, you can press **Data display** on the function menu of the recorded system. (Refer to 6-1-1(3)) --to (3)

- (2) Press **Data display** button.

- (3) Recorded data file list
  - The file list of the drive recorder (and data list records) saved into the PC is displayed.
  - You can view the data details by selecting the data you wish to view from the list and pressing button.
  - In addition, you can view graph data by pressing button. (to 6-3-1(3))
  - The background color of the line containing the selected file changes into yellow.

-- Edit record information – refer to (4)

-- Delete the data file -- refer to (5)

-- Save the data file -- refer to (6)

Note:

-The configuration of the displayed file names is DR+Year Month Day+Time(military time including seconds), using the PC time.

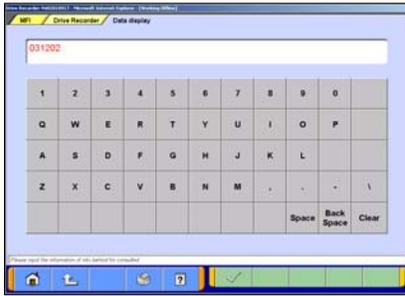

-The most recent recorded data appears on top of the list.

-Those file names, which begin with “SD”, contain the data of Data List records. (Refer to 4-2-2.(2))

#### **Caution: About “CSV file”**

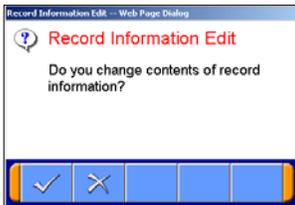

If you open the CSV file on M.U.T.-III using EXCEL, never overwrite and save it. (However, they are allowed after the file is transferred from M.U.T.-III to another PC or copied in another folder.)

## Recorded Data Handling

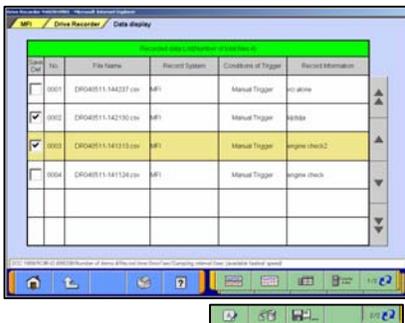

### (4) Edit Data Information

1. Select a file to edit and press button to display the screen illustrated on the left, where you can edit the record information that was entered in 6-1-1(10) or 6-1-2(10). Press button.

### 2. Edit Confirmation

2. Press button. → returns to (3)

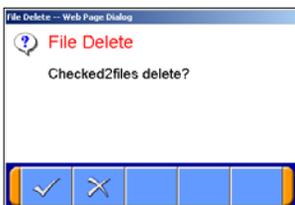

### (5) Delete Data

1. To delete a data file loaded on the PC, click the check box next to file No. in the file list (refer to (3)) to place a check mark, and press button. (Two or more check marks can be placed.)

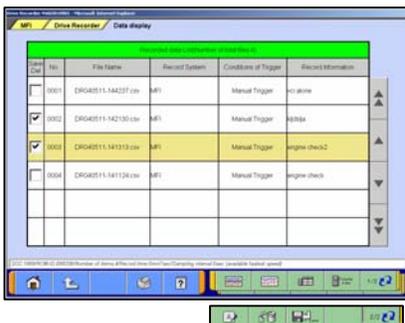

Note:

- mark will be displayed, if cursor is moved on a check box and it clicks. (Selection)
- mark is eliminated by clicking again. (Selection release)

### 2. File Delete Confirmation

2. A message appears asking if you wish to delete the data file. Press button to delete the file.

### (6) Save Data

1. The data file can be saved to a removable disk (floppy disk or memory card).
  - Insert a disk into the PC, first.
  - Click the check box next to the file No. in the file list to place a check mark, and press button. (Two or more file selections are possible.)

Note:

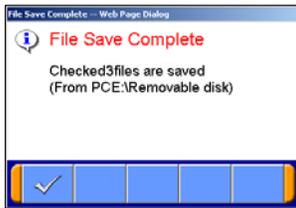

- mark will be displayed, if cursor is moved on a check box and it clicks. (Selection)
- mark is eliminated by clicking again. (Selection release)

## Recorded Data Handling

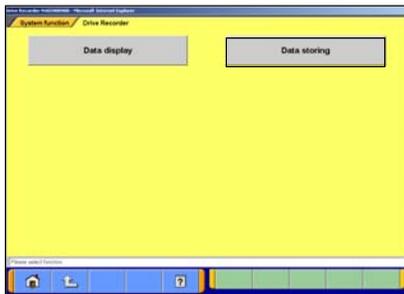

### 2. Drive Select

Select a drive for saving the data files, and press  button.

### 3. Data Saved

The files are saved. Press  button.

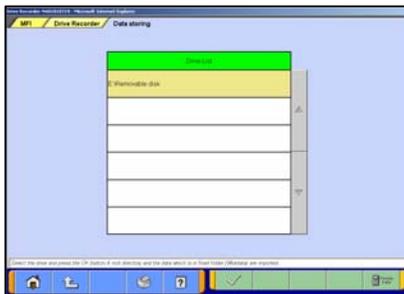

### (7) Data Storing

#### 1. The data saved in a removable disk before can be stored into the PC.

-Insert the disk into the PC, first.

-Press **Data Storing** button on the Drive Recorder function menu. (Refer to (2))

### 2. Drive Select

Select the drive storing the data.

 -- Display of V.C.I. Data -- refer to 6-2-1(5)

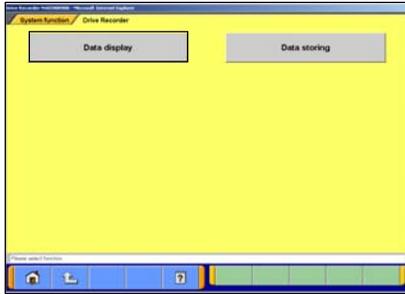

### 3. Data Storage Complete

The data has been loaded to PC.

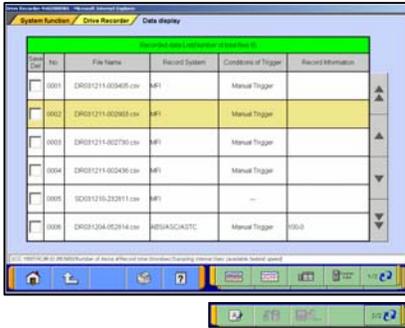

Press  button.

## 6-3. Display and Analysis of the Recorded Data

### 6-3-1. Display the Recorded Data

- Press **Special Function** on the STV Top Menu. Then select the **System Functions** tab on the upper part of the screen, and press **Drive Recorder (Display only)**, then press **Data display** button.  
-Or, if the PC is connected to the vehicle through V.C.I., you can press **Data display** on the function menu of the recorded system.

- Recorded data file list  
Data file list that contains record of Drive recorder and Data list saved in PC will be displayed.  
You can view the data details by selecting the data you want to display from the list and pressing button.  
In addition, you can view graph data by pressing or button.  
-The background color of the line containing the selected file changes into yellow.

- Displaying Text Data
  - Graph data 1
  - Graph data 2
  - Select item (to (4))
  - Edits extraction conditions (to 6-3-2.(1))
  - Sets search conditions (to 6-3-2.(2))
  - Jumps to a trigger point.
  - Saves data (to (6-3-2.(3)))
  - Displays a correlation diagram (to 6-3-3.(1))
  - Displays a distribution chart (to 6-3-3.(2))
  - View 1/3
  - View 2/3
  - View 3/3

## Display and Analysis of the Recorded Data

### Displaying Graph 1

- Text data
- Graph data 2
- Select item (to (4))
- Edits extraction conditions (to 6-3-2.(1))
- Jumps to a trigger point
- Saves data (to 6-3-2.(3))
- Displays a correlation diagram (to 6-3-3.(1))
- Displays a distribution chart (to 6-3-3.(2))
- Change Time Scale
- Change Data Scale
- View 1/3
- View 2/3
- View 3/3

### Displaying Graph 2

- Displayed items are overlaid on a graph.
- The function buttons are the same as Graph1.

### (4) Select item

button allows you to select items to be displayed from recorded data.

When complete the selection, press button.

The item number of service data OBD basic items appears green.

- Inserts all the items from "Available items list" into the selected areas of "Selected items list."
- Inserts the item selected in "Available items list" into the selected area of "Selected items list".
- Inserts the item selected in "Selected items list" into the lowermost area of "Available items list".
- Inserts all the items from "Selected items list" into the lowermost areas of "Available items list."
- Changes the order in which the items are displayed in "Selected items list" and "Available items list," in the sequence of default setting.

## Display and Analysis of the Recorded Data

### 6-3-2. Extraction and Search of the Recorded Data

Recorded data can be extracted or retrieved for display on predetermined conditions.

<Extraction: Only matching data will be displayed>

<Retrieval: Matching data will be displayed with \*(asterisk)>

Time range, threshold of item etc. can be set as condition of extraction or retrieval.

#### (1) Condition setting for data extraction

Extraction condition setting screen shown on the left will be displayed after pressing  button on text/graph display screen.

- Select an item and edit its condition in Condition editing table appearing at the bottom of the screen.

#### Condition editing table

“UP/DOWN”: Threshold or higher / Threshold or lower

“Level/Edge”: Matching data / Data as of the time when it turns to be matching from not matching

“AND/OR”: -Data matching with both of this condition and the other one upper row on Extraction Setting table/  
-Data matching with either of this condition or the other one upper row on Extraction Setting table

- Then, press  button to add the condition onto Extraction Setting table.  
(Extraction Setting table can include up to 8 conditions.)
- Press  button to display extracted data only in text/graph.

 --Set Time extraction condition.

 --Delete selected extraction condition data.

#### Time extraction condition setting

After pressing  button, time extraction condition setting screen shown on the left will be displayed. Set time range on this screen and press  button to display extracted data only.

 --Return to data extraction condition setting screen.

## Display and Analysis of the Recorded Data

### (2) Conditions setting for data search

Condition setting screen shown on the left will be displayed after pressing  button on text data display screen.

- Select an item and edit its condition in Condition editing table appearing at the bottom of the screen. (See (1) for more details.)
- Then, press  button to set the condition onto Retrieval condition table. (Retrieval condition table can include up to 8 conditions.)
- Press  button to display text data screen showing \* (asterisk) in the Judge column of the data matching with the retrieval condition.

--Set Time retrieval condition.

--Delete selected condition.

### Time retrieval condition setting

After pressing  button, Time retrieval condition setting screen shown on the left will be displayed. Set time range on this screen and press  button to display text data screen showing \* (asterisk) in the Judge column of the record data matching with the retrieval condition.

--Return to Search conditions setting screen.

### (3) Data save

When pressing  button on the screen of displaying data, you can save the extracted or retrieved data into the PC.

As the left dialog box appears, press  button.

Note:

The configuration of the file name is original data file name + alphabet (a,b..z).

## Display and Analysis of the Recorded Data

### 6-3-3. Diagram and Chart

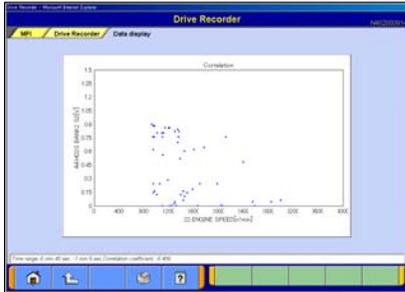

#### (1) Setting the Correlation Diagram

Pressing  button on the screen illustrated in 6-3-1(3) displays the correlation diagram settings screen as illustrated on the left.

Setting the target data time range, item names and data display range and pressing  button displays the correlation diagram.

<Correlation Diagram>

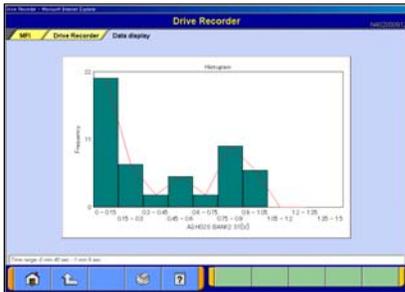

#### (2) Setting the Distribution Chart

Pressing  button on the screen illustrated in 6-3-1(3) displays the distribution chart settings screen as illustrated on the left.

Setting the target data time range, item names, data range, division width, and frequency range and pressing  button displays the distribution chart.

<Distribution Chart>

## Display and Analysis of the Recorded Data

### 6-3-4. Other Functions

Judge	Time	A3	A3	A7	A3
Hz	V	F	%	min	
0.02 033	0.000	-40	0.0	0	
0.02 104	0.000	-40	0.0	0

#### (1) Changing Item Display Order

On the data list display screen, you can change the display order of the items. The change is possible for both text display and graph display.

- Selecting the name display area of an item fixes the item.
- Then over-scrolling only the items not selected using scroll keys changes the order.
- The selection can be released by selecting the item again.
- The function is not activated while a data range display area is selected in the data range change function. (Selection, release, and scroll functions of item are not available.)

SNo	No	Item Name	Value	Graph
1	21	ECT SENSOR	-40 °C	Graph
1	22	ENGINE SPEED	0 min	Graph
1	A3	PO2 BANK1 B2	0.020 V	Graph
1	11	A7 SENSOR	-40 °C	Graph

#### (2) Data Range Change

Select a data range display area on the graph.

When the color of the selected area turns into yellow, you can enter values.

Entering method: Use PC keyboard or scroll keys.

- When the PC keyboard is used, enter a value from the keyboard and then press the [Enter] key or release the selection of the data range display area to determine the data range change.
- When the scroll keys, ▲ and ▼, on the screen are used for the data range change, pressing the ▲ key each time changes the data range setting by +5 % of full scale and the ▼ key changes it by -5 %. The change is determined at each key pressing.

## Chapter 7 SWS Monitor

(Not supported by V.C.I.-Lite)

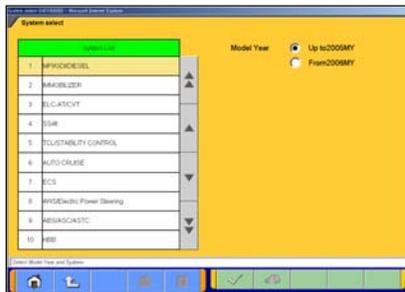

### 7-1. SWS Monitor Operation

#### Precautionary Notes

Prior to connecting or disconnecting the SWS monitor and vehicle, be sure to turn the ignition switch OFF.

1. If the SWS monitor is connected to the column switch connector, connecting the SWS monitor cartridge and V.C.I. prior to V.C.I. power activation may cause damage to the V.C.I. Refer to connection instructions for more details - connect the monitor cartridge after the V.C.I. is connected to the vehicle and the V.C.I. power switch is ON.
2. If you wish to use the SWS monitor continuously for a long period of time, the V.C.I. and SWS cartridge will consume power. Take extra precautions to ensure that the battery does not die during use.
3. Use of cellular phones and amateur radios near the SWS monitor during use may cause the SWS monitor to not function properly. Avoid using such apparatuses near the monitor during use.
4. During use, the SWS monitor may affect systems employing weak electric currents such as GPS systems.
5. The tip of the door communication probe is sharp. Be careful during handling.

#### 7-1-1. SWS Monitor Function

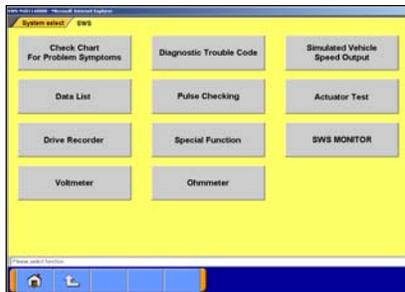

- (1) System Select

Select "SWS" on the System Selection screen.

(For instructions on how to select a system, refer to 3-3-1)

Note:

SWS monitor cartridge is required in M.U.T.-III as well for SWS monitor. For details regarding how to connect the cartridge and harness, see the M.U.T.-II reference manual (Pub. No. MSSP-310B-2002) or the service manual data of each vehicle.

- (2) Function Select

Press **SWS MONITOR** button on the SWS function menu.

Note:

If the SWS monitor cartridge is not connected to the vehicle, **SWS MONITOR** button does not appear.

- (3) Function Select

The SWS monitor menu screen appears.

**ECU Comm Check** -- to 7-1-2.

**Data List** -- to 7-1-3.

**Function Diag.** -- to 7-1-4.

**Drive Recorder** -- to 7-1-5.

# SWS Monitor Operation

## 7-1-2. Checking ECU Communication

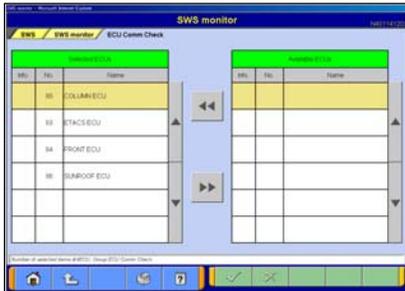

### (1) Item Select

The item selection screen appears.

Select items to check and press  button.

Note:

All items are selected as default.

### (2) Displaying Graph

“OK” appears if the ECU is communicating properly, and “NG” appears if there is a communication error. “NG” also appears if the system has not been installed or is installed but not communicating. Prior to performing the check, therefore, it is necessary to identify the system for the monitored vehicle.

 --Change Time Scale

 --View text style--to (3)

### (3) Displaying Text style

If you press **How to Check ECU's** button, you can view the Service Manual. (Not Available in US)

## 7-1-3. Data List

### (1) Item Select

Select an ECU to monitor from the Data List, and press  button.

 --Item Select

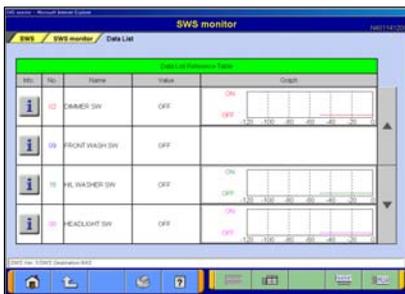

### (2) Displaying Graph

 --View text --to (4)

 --Change Time Scale

 --Change Data Scale

## SWS Monitor Operation

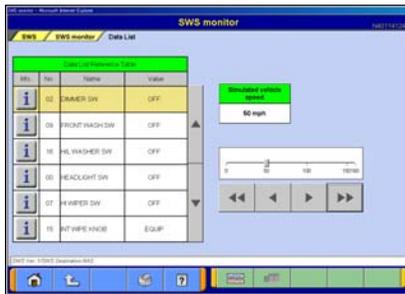

### (3) Displaying Texts

**Data List Reference Table**--Displays the Data List of the Service manual. (Not Available in US)

**Simulated Vehicle Speed Output**--

Allows you to simultaneously view the Simulated Vehicle speed and Data List. --to (5)

--View graph

### (4) Simulated Vehicle Speed Output

The Simulated Vehicle speed output function displays the simulated vehicle speed and Data List simultaneously.

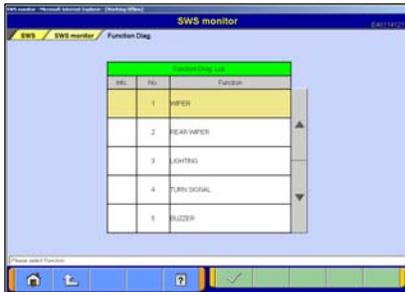

Speed output can be changed in 1 mph or 10 mph increments using the speed adjusting buttons.

--Unit: 1mph

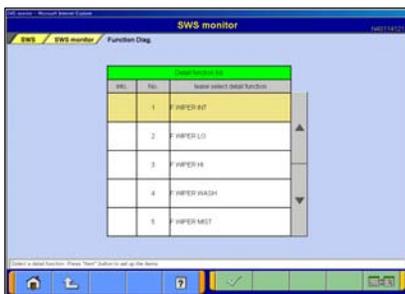

--Unit: 10mph

--View graph

## 7-1-4. Function Diagnosis

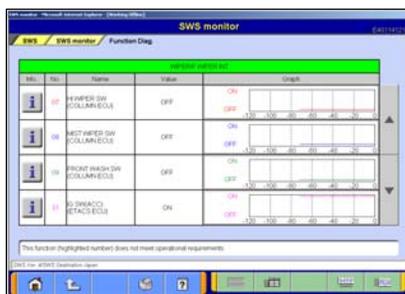

(1) Press **Function Diag** button on the screen illustrated in 7-1-1(3). Select the function you wish to diagnose and press button.

(2) Select a detailed function and press button.

--Item Select

### (3) Displaying Graph

--View Text --to (4)

--Change Time Scale

--Change Data Scale

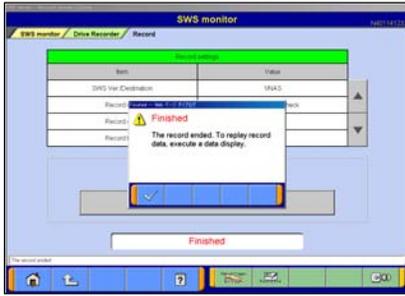

Note:

If required operating conditions are not met, the item number appears in pink color.

## SWS Monitor Operation

- (8) Ending Recording  
To end recording, press  button.

- (9) Data Display  
Select **Data Display** button on the screen of (1).  
You can also display recorded data by returning to the STV Top Menu, selecting **Special Functions**, then selecting the system function **SWS Drive Recorder**. In this case, you can view the data without connecting V.C.I. to the vehicle by using an AC-DC adapter (MB991878).

- (10) You can set a time in which you wish to regenerate and view the data as described below.  
The day and hour can be set using  buttons.

After the setting, press  button.

- (11) Displaying Recorded Data  
Select the items you wish to display and press  button.

Note:  
All items are selected as default.

- (12) Displaying Data  
The recorded data are displayed in graph format by default.  
 -- View Text  
 --Displays the previous or next data change point.  
 --Displays the previous or next record. You can also set the settings by operating the slide bar.

## Chapter 8 Coding Function

### 8-1. VIN Writing Function

- This is the function for VIN writing into ECU, which is required by U.S. regulation. You need to set it for a new installed ECU when replace ECUs.
- In case VIN has not been written into ECU, DTC (Diagnostic Trouble Code) will be stored and the MIL (Malfunction Indicator Lamp) will light up.

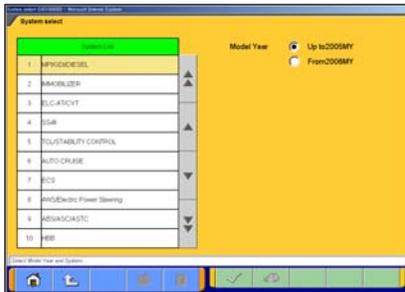

#### 8-1-1. VIN Writing Function

- (1) Select “MFI” system on the System Selection screen.  
(For instructions on how to select a system, refer to 3-3-1)

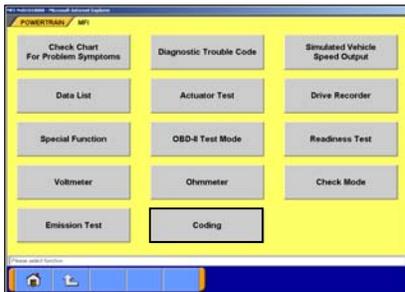

Note:

-If the engine is OBD, the check code appears.

-As a selection screen asking whether MITSUBISHI or Chrysler appears, select a button that the engine belongs to.

- (2) Select **Coding** button on the Function selection screen.

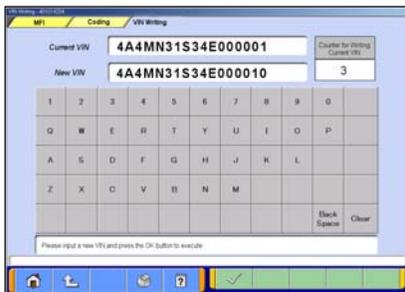

- (3) The screen illustrated on the left appears. Select **VIN Writing** button.

Note:

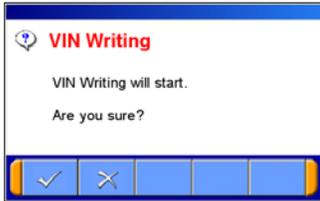

**VIN Information** --to 8-1-2.

- (4) Currently registered VIN is displayed on “Current VIN” box. Input a new VIN in the “NEW VIN” input box and then press **✓** button.

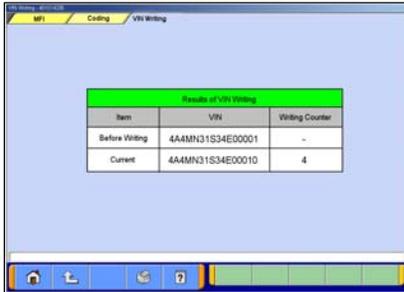

## VIN Writing Function

- (5) A confirmation dialog box appears.  
Press  button to execute VIN writing.

When VIN writing is complete, another dialog box appears.  
Press  button again.

- (6) The Results of VIN Writing are displayed.  
To exit this screen, press  or  button.

### 8-1-2. VIN Information Display

- (1) Select **VIN Information** button on 8-1-1(3), and the screen illustrated on the left appears.

To exit this screen, press  or  button.

## Chapter 9 CAN Bus Diagnosis

### 9-1. Diagnosing the CAN Bus

**< CAUTION >**

- When you execute CAN Bus diagnosis, use M.U.T.-III main harness A.  
([MB991910](#) harness for V.C.I., [MB992745](#) harness for V.C.I.-Lite should be used.)
- When you execute CAN Bus diagnosis, halt the vehicle.
- Calibrate ohmmeter to 0 point periodically for proper diagnosis. (refer to 12-3-2.)  
(V.C.I.-Lite does not support the function of voltage/resistance measurement for CAN Bus Diagnosis.)

#### 9-1-1. CAN Bus Diagnosis

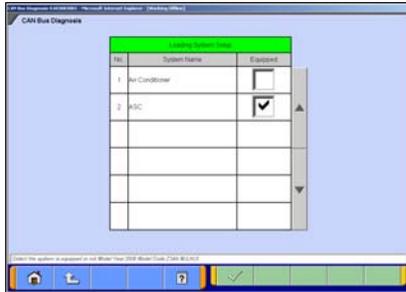

(1) Start Screen

Press **CAN Bus Diagnosis** button on the STV Top Menu (illustrated on 3-2), then the left screen appears.

Confirm the contents of Diagnosis Vehicle information list on the screen.

-If the contents are describing the vehicle, press . → (2)

-If the contents are not describing the vehicle, press to correct the information. (refer to 3-3-2)

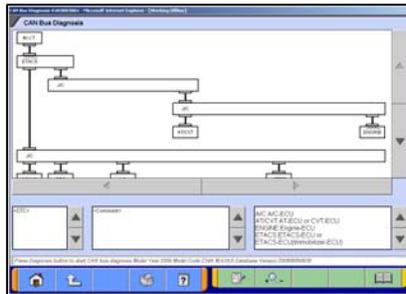

(2) Equipping System Setup

Put a check mark if the equipment is existence, and press button.

Note:

✓ mark will be displayed, if you move cursor onto a check box and click it. (Selection)

✓ mark will be eliminated, if you click again. (Selection release)

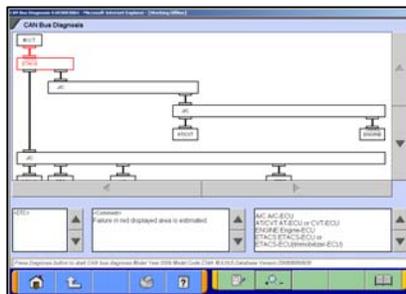

(3) CAN Bus Diagnosis

Pressing button starts the CAN bus diagnosis process.

Note:

The right lower message box shows the details of ECU names displaying on the configuration screen.

(4) Results

The results of the diagnosis are reflected on the configuration screen (Error locations are indicated in red), and the comment is shown on the center lower message box.

--This button is able to zoom out the CAN Bus configuration screen. When a button is pressed again, the CAN Bus configuration screen returns to the original size.

--Displays the data of the Service manual pertaining to the error locations. (Not Available in US)

## Process Flow Chart

### Chapter 10 ECU Reprogramming

Notes:

- This function enables the program installed in ECU to be reprogrammed using M.U.T.-III.
- As VIN or other setting information on ECU is not erased by this reprogramming, you do not need to rewrite VIN.
- You can not do ECU Reprogramming with V.C.I.-Lite stand-alone.

#### 10-1. Process Flow Chart

##### ■ Reprogramming by K-Line communication system

- There are 7 different ways for ECU reprogramming as shown below.
- Procedure (a) is recommendable due to the most simple in operation.
- File extension code is "xxxx.rpg".

Process flow chart

(Chapter No.)

Device		V.C.I. alone (Not supported by V.C.I.-Lite)			PC + V.C.I. (Optional)			
		(a) Auto data retrieval	(b) Load RPG file	(c) ECU reprogram	(d) Automatic reprogramming (K-line)	(e) Database File Display	(f) Reprogram Data Selection	(g) Search
Data selection method		Automatic	Select from Data library	-	Automatic	Select from data library in PC	Select from data library in any drive	Select by key of vehicle info.
1	CD-Rom => PC	<b>10-3-1</b>	10-3-1	-	10-3-1	10-3-1	10-3-1	10-3-1
2	PC => CF memory card	<b>10-4-1</b>	10-4-1	-	-	-	-	-
3	CF memory card => V.C.I.	<b>10-4-2</b> + <b>10-4-3(a)</b>	10-4-2 + 10-4-3(b)	-	-	-	-	-
4	PC => V.C.I. (Not via memory card)	-	-	-	10-5-1 + 10-5-2(a)	10-5-1 + 10-5-2(b)	10-5-1 + 10-5-2(c)	10-5-1 + 10-5-2(d)
5	V.C.I. => ECU	<b>10-4-4</b>	10-4-4	10-4-3(c)+ 10-4-4	10-5-3	10-5-3	10-5-3	10-5-3
Note		Recommended	In case of (a) failure	Special use only (When data stored in V.C.I.)	In case memory card is N/A	In case memory card is N/A and (d) failure	In case memory card is N/A and (d) failure	In case memory card is N/A and (d) failure

##### ■ Reprogramming by CAN communication system

- This is the only way for reprogramming by CAN communication system.
- This procedure allows you to select an arbitrary system (ECU) to reprogram as required.
- File extension code is "xxxx.cff".

Device		PC+V.C.I.
Process name		<b>Automatic Reprogramming (CAN)</b>
Data selection		<b>Automatic</b>
1	CD-Rom => PC	<b>10-3-1</b>
2	PC => V.C.I. => ECU	<b>10-6</b>

# Equipment

## 10-2. Equipment

Necessary parts for ECU reprogramming are as follows

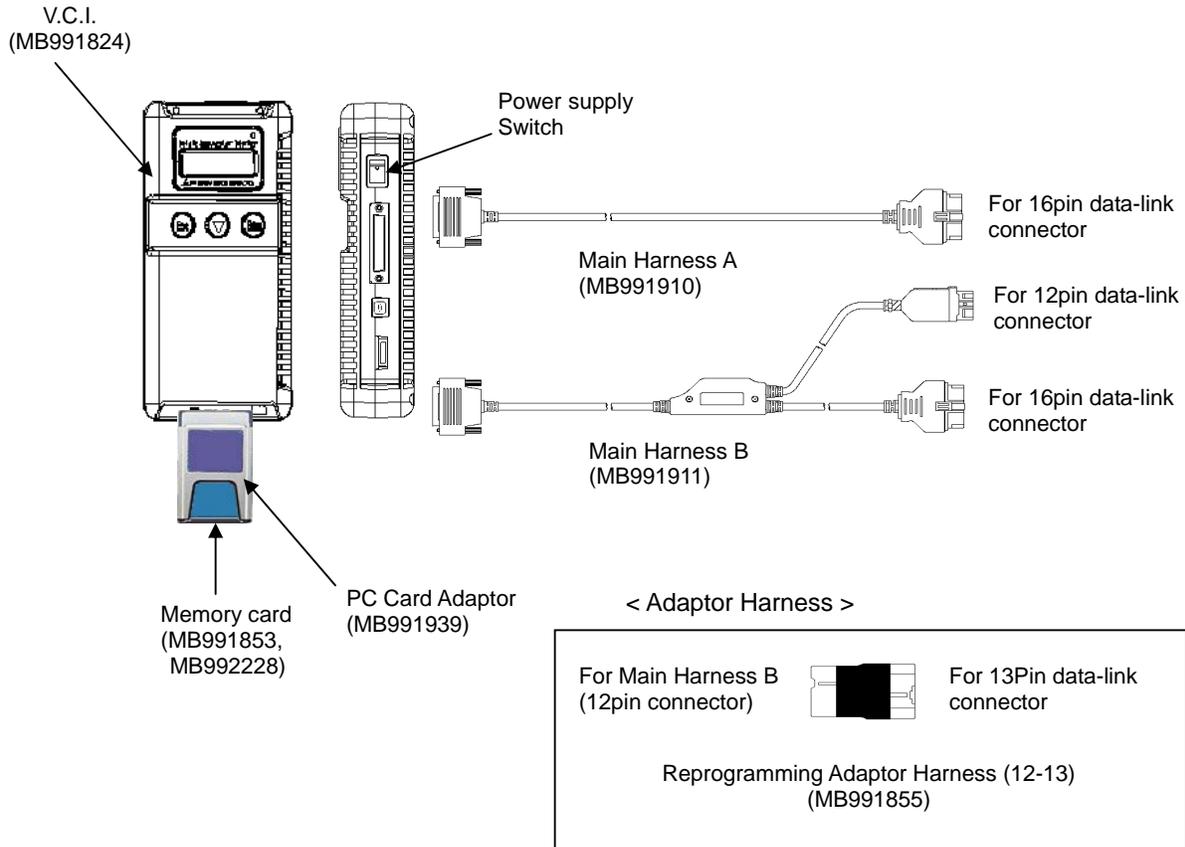

Parts Name	Parts Number
M.U.T.-III Personal Computer	-
Update CD-ROM of reprogramming data	-
CF Memory card (128MB)	MB991853
CF Memory card (1GB)	MB992228
CF Memory Card Adaptor	MB991939
V.C.I.	MB991824
V.C.I.-Lite	MB992744
M.U.T.-III Main Harness A(44-16) *1	MB991910
M.U.T.-III Main Harness A for Lite (15-16) *1	MB992745
M.U.T.-III Main Harness B(44-16/12)	MB991911
M.U.T.-III Main Harness B for Lite (15-16/12)	MB992746
Reprogramming adapter Harness (12-13) *2	MB991855

Only when reprogramming with V.C.I. alone

### Remarks

\*1: Vehicle which is only equipped with a 16 pin data-link-connector.

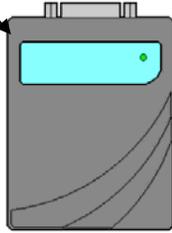

\*2: Vehicle which is equipped with 16 pin and 13 pin data-link-connector.

# Equipment

---

V.C.I.-Lite  
(MB992744)

Main Harness A for Lite  
(MB992745)

For 16pin diagnosis  
connector

Main Harness B for Lite

connector

Reprogramming Adaptor Harness (12-13)  
(MB991855)

## Data Preparation on PC from Update CD-ROM

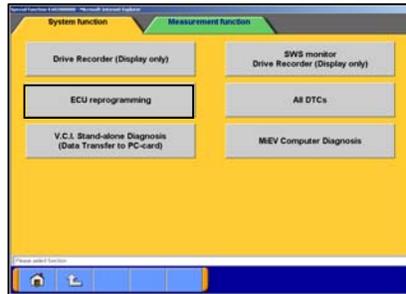

### 10-3. Data Preparation on PC from Update CD-ROM

#### 10-3-1. PC Update Operation (CD-ROM --> PC)

- (1) When an Update CD-ROM of ECU reprogramming data is distributed newly, insert the CD-ROM into CD-drive on PC.

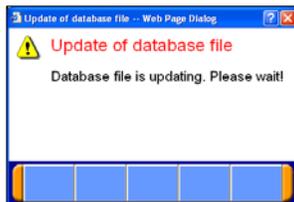

- (2) Press **Special function** button on STV Top Menu.

- (3) Select **System Function** tab, and press **ECU reprogramming** button.

- (4) The message "Please update to a new database file." is displayed when the new Update CD-ROM is recognized. Press  button.

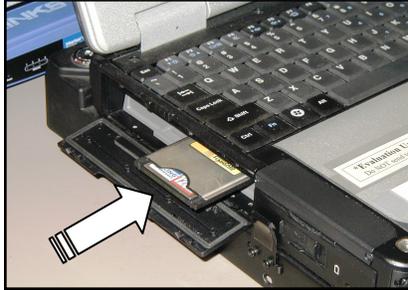

- (5) The message "Please wait!" is displayed during progress. When complete the updating, the message disappears. You can remove the CD-ROM from PC.

## Reprogramming Operation (V.C.I. alone)

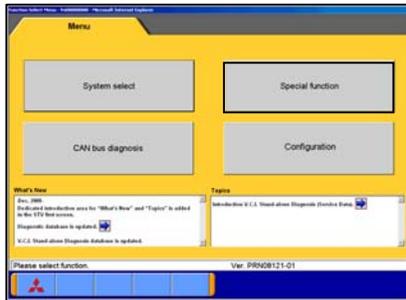

### 10-4. Reprogramming Operation (V.C.I. alone)

(Not supported by V.C.I.-Lite)

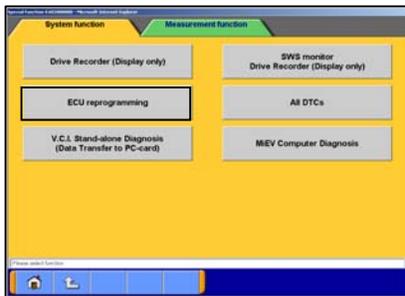

#### 10-4-1. Data Transfer (PC --> Memory Card)

- (1) Start up the M.U.T.-III system.  
Insert the Memory card (MB991853, MB992228) into the Card Adaptor (MB991939), and then insert them into m-card slot on PC.

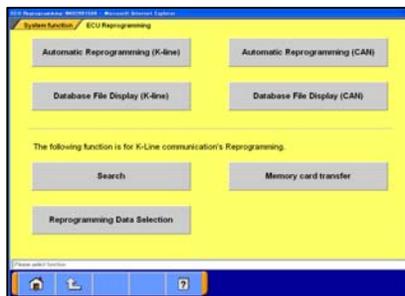

- (2) Press **Special function** button on STV Top Menu.

- (3) Select **System Function** tab,  
and press **ECU reprogramming** button.

Caution:

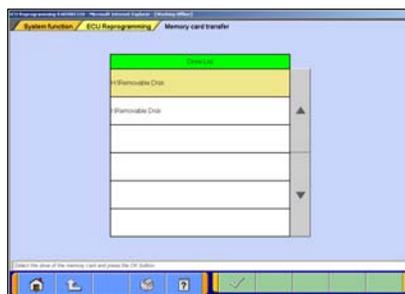

-In case an update CD-ROM is set in the PC with update undone, data update starts. (refer to 10-3-1(4))

- (4) Press **Memory card transfer** button.  
ALL reprogramming data in the M.U.T.-III PC are transferred to the memory card.

[Caution]

-Do not remove the memory card from PC.

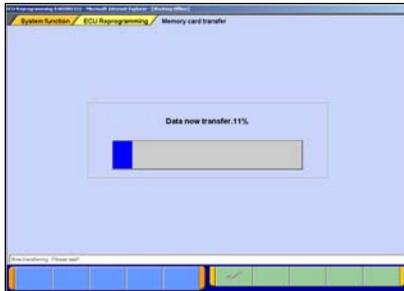

- (5) Select a memory card drive, and press  button to start transferring.

## Reprogramming Operation (V.C.I. alone)

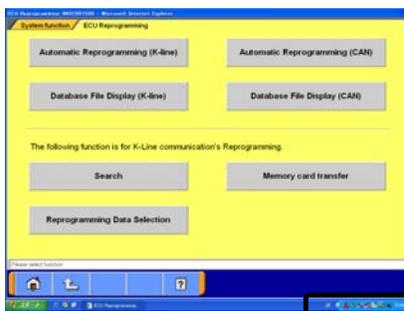

- (6) Press  button when the message "It transfers data to the memory card. Are you ready?" appears

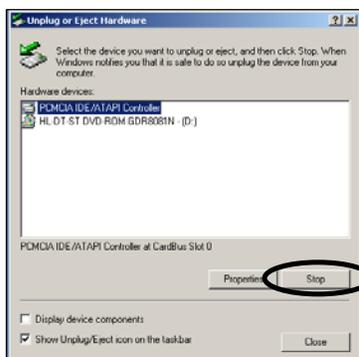

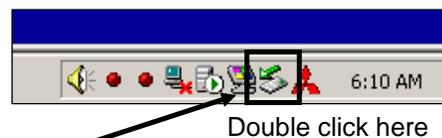

- (7) Data transfer  
The progress bar is displayed during the transfer.

- (8) The data transfer is complete.  
Press  button.

- (9) Before you remove the memory card, double-click the below icon for removal of the adaptor.

- (10) Select [PCMCIA IDE/ATAPI Controller] or the other appropriate device, then press **Stop** button.

## Reprogramming Operation (V.C.I. alone)

(11) Verify the contents of the selection, then press **OK** button.

(12) After displayed the message “The device can now be safely removed from the system”, push the lever on the side of PC card slot and remove the memory card.

Caution:

Do not remove the memory card away unless complete above method or turn off the PC.

### 10-4-2. Equipment Set-Up

(1) Insert the Memory card (MB991853, MB992228), which is storing the reprogramming data, into the Card adaptor (MB991939) and insert them into V.C.I. main unit (MB991824)

(2) Connect M.U.T.-III Main Harness B (MB991911) or A (MB991910) to V.C.I. main unit securely. (Refer to 10-2.)

Note:

Select appropriate harness by instruction below.

- Main harness A: For vehicle only equipping 16 pin data-link-connector.
- Main harness B: For other vehicles.
- Adaptor harness (12-13): Outlander, Montero (after '02MY)  
(To connect Main harness B and 13pin data-link-connector)

(3) After verifying the ignition switch position at LOCK (OFF), connect the M.U.T.-III Main harness B or A to the data-link-connector.

(4) Turn Ignition switch on, and turn V.C.I. main switch on.  
**(Do not start engine)**

## Reprogramming Operation (V.C.I. alone)

### 10-4-3. Data Retrieval (Memory card --> V.C.I.)

[\(a\). Automatic Data Retrieval](#)

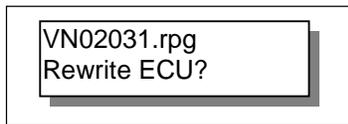

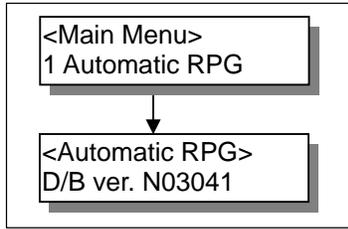

[\(b\). Select and Load Data](#)

[\(c\). \(Special case\)](#)

#### (a). Automatic Data Retrieval

- (1) Select "Automatic RPG" in main menu and press Enter key. Version No. of data base file appears.

By waiting 10sec or pressing Enter key, V.C.I starts communicating with ECU and retrieves reprogramming data file with the ECU's parts No. and ROM-ID.

- (2) The appropriate reprogramming data file No. is displayed. Pressing Enter key starts transferring the data file into V.C.I built-in-memory.

Remark:

- To search another data, press Esc key. If another appropriate reprogramming data exist, it will be displayed.

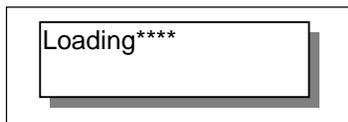

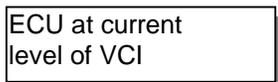

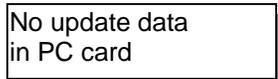

- The message bellows are displayed depends on ECU parts No, ROM-ID and condition of ECU. Press Enter Key to move back to Main menu.

(a) "No update data in PC card"

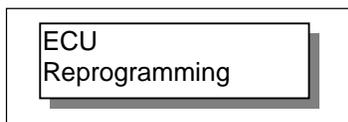

This message appears if no pertinent reprogramming data exists. No data will be transferred.

(b) "ECU at current level of VCI"

This message appears if the ECU has been already reprogrammed. No data will be transferred.

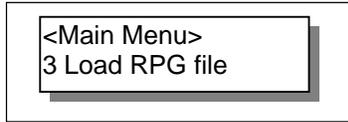

- (3) Progress is displayed on the monitor.  
\* mark is increased by steps.

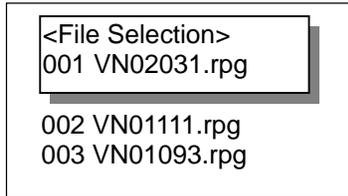

- (4) After completing data transfer, ECU reprogramming starts sequentially.  
For next steps, refer to 10-4-4.

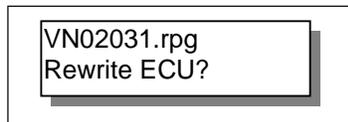

## Reprogramming Operation (V.C.I. alone)

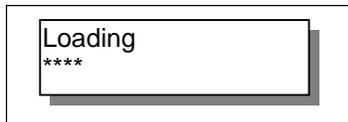

```
<Main Menu>
3 Load RPG file
```

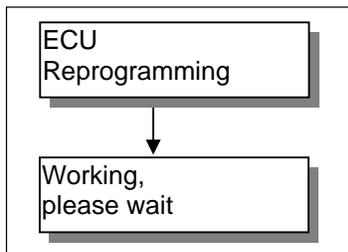

```

↓
ECU
Reprogramming
```

### (b). Select and Load Data

(1) Select “Load RPG file” in main menu by ▼ key, and press Enter key.

(2) Select a reprogramming data file by ▼ key, and press Enter key.

Esc key: Move back to main menu.

Remark:

-The data files are displayed in numeric order of data No..  
(From big to small; new to old)

(3) Reconfirm the data file No., and press Enter key to start transferring the data into V.C.I. built-in-memory.

Esc Key: Cancel

(4) Progress is displayed on monitor  
\* mark is increased by steps.

(5) After completing data transfer, ECU reprogramming starts sequentially.

For next steps, Refer to 10-4-4.

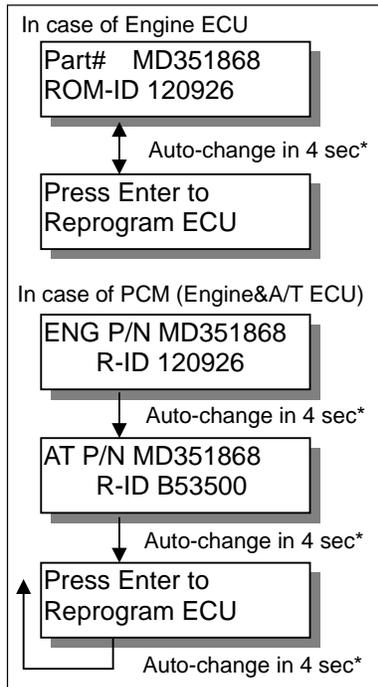

### (c). (Special case)

(1) If V.C.I. has already stored the reprogramming data, select “ECU Reprogram” in main menu, and press Enter key.  
(Refer to 10-4-2.(2)-(4) for setting up the equipments.)

Reprogramming data file No. and program version No. in the V.C.I. memory are displayed for a few seconds, and then ECU reprogramming starts sequentially.

For next steps, refer to 10-4-4.

## Reprogramming Operation (V.C.I. alone)

### 10-4-4. Reprogramming ECU (V.C.I.--> Vehicle ECU)

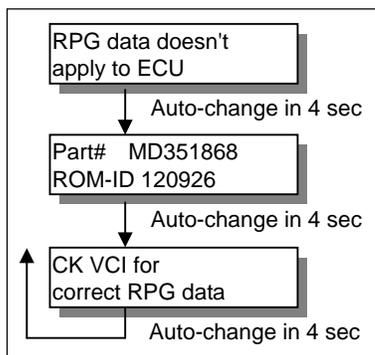

- (1) ECU parts No. and ROM-ID No. are displayed.  
Press Enter key to start reprogramming.  
ESC / ▼ key : restart V.C.I.

\* : By pressing ▼ key, immediately move to next.

Note:

- Reprogramming must carry out on the condition of engine stop and IG switch on.
- Do not disconnect harness/ turn off the IG switch during ECU reprogramming.

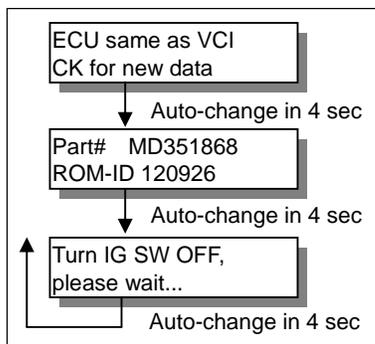

[Messages before/during reprogramming process]

- a) "RPG data doesn't apply to ECU"

Reprogramming stopped owing to the data in V.C.I. memory being not appropriate for the ECU.

- Note down the displayed ECU parts No. and ROM-ID.
- Restart V.C.I. by pressing Enter key, and confirm the matching of the data file No, which is displayed by reboot, and the ECU part No./ ROM-ID for reprogramming.

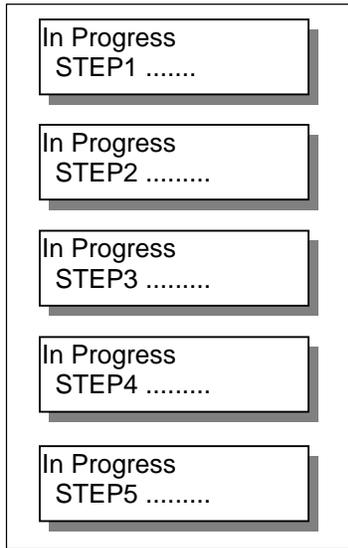

- b) "ECU same as VCI, CK for new data" (CK; check)

Reprogramming stopped because reprogramming has been already done.

## Reprogramming Operation (V.C.I. alone)

---

(2) 5 steps progress is displayed while reprogramming.

Caution:

- Do not press any key during reprogramming automatically proceeding.
- Do not turn off V.C.I. power or IG switch during reprogramming.

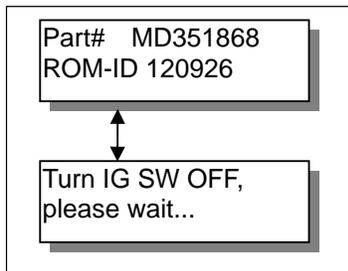

STEP1: Saving the data to the back up memory.

STEP2: Erasing data in ECU.

STEP3: Writing reprogramming data

STEP4: Verifying the data between ECU and V.C.I.

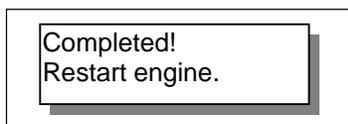

STEP5: Erasing diagnosis code and back up memory

(3) On completion of the 5 steps, new reprogrammed ECU parts No. and ROM-ID are displayed.  
Turn IG switch LOCK(OFF).

Note:

Diagnosis code might be memorized in ECU if without turning IG switch Lock (off)

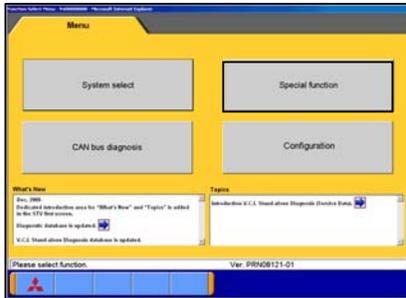

(4) ECU reprogramming completed

Verify the system properly operated by starting engine.

Enter key: V.C.I. restart

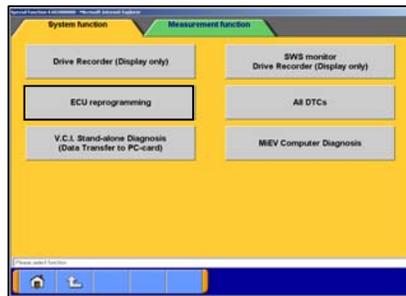

## Reprogramming Operation (V.C.I. - PC connected)

### 10-5. Reprogramming Operation (V.C.I. - PC connected)

#### 10-5-1. Search Method Selection

(1) Press **Special function** button on STV Top Menu.

(2) Press **ECU Reprogramming** button.

(3) Select an appropriate button.

**Automatic Reprogramming (K-line)** --to 10-5-2(a)

- Automatically searches appropriate Reprogramming data stored in PC.

**Database File Display (K-line)** --to 10-5-2(b)

- Shows the list of Reprogramming data stored in PC.

**Reprogramming Data Selection** --to 10-5-2(c)

- Allows to select Reprogramming data in arbitrary drive and directories.

**Search** --to 10-5-2(d)

- Allows to search the target data by ECU No., ROM-ID, etc.

**Automatic Reprogramming (CAN)** --to 10-6(a)

- Automatically searches appropriate Reprogramming data stored in PC.

**Database File Display (CAN)** --to 10-6(b)

- Shows the list of Reprogramming data stored in PC.

**Memory card transfer** --to 10-4-1

- Transfer of stored Reprogramming data to Memory card.

- ◇ Connect PC and V.C.I., and prepare following steps.
1. Connect M.U.T.-III Main Harness B or A to V.C.I. securely.
  2. After verifying the ignition switch position at LOCK (OFF), connect the M.U.T.-III Main harness B or A to the vehicle's data-link-connector.
  3. Turn Ignition switch on, and turn V.C.I. main switch on. (Do not start engine)

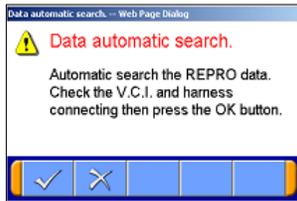

## Reprogramming Operation (V.C.I. - PC connected)

### 10-5-2. Data Search & Transfer (PC --> V.C.I.)

- [\(a\). Automatic Data Search](#)
- [\(b\). Database File display](#)
- [\(c\). Reprogramming Data Selection](#)
- [\(d\). Search](#)

#### (a). Automatic Data Search

- (1) Press **Automatic Reprogramming (K-line)** button on the function menu, then the left dialog box appears. Verify the connection of V.C.I. and harness, and press . Applicable reprogramming data is searched from database installed in PC automatically.

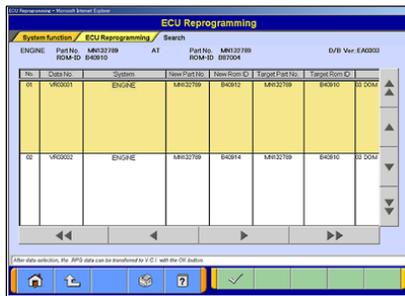

- (2) Result of the search appears.

Select an appropriate data file with scrolling the list using buttons, and press  to start transferring the data into V.C.I. memory.

-After completing the data transfer, ECU reprogramming will start sequentially. (Refer to 10-5-3.)

Note:

Press **OK** button when message window of device removal warning comes out at start and end of data transfer.

#### (b). Database File display

Press **Database File Display (K-line)** button on the function menu, then the left screen appears.

-Reprogramming data files in the hard disk are listed.

-Select an appropriate data file with scrolling the list using buttons, and press  to start transferring the data into V.C.I. memory.

--10 lines scrolling

-After completing the data transfer, ECU reprogramming will start sequentially. (Refer to 10-5-3.)

Note:

Press **OK** button when message window of device removal warning comes out at start and end of data transfer

## Reprogramming Operation (V.C.I. - PC connected)

### (c). Reprogramming Data Selection

To select the reprogramming data from arbitrary directories.

- (1) Press **Reprogramming Data Selection** button on the function menu, then the left screen appears.

 --to select arbitrary drive and directory → (2)

On this screen, select an appropriate data file and press  to start transferring the data into V.C.I memory.

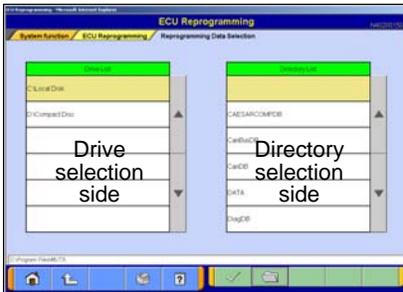

Note:

-The displayed data as default is in the folder shown below.

C:\Program Files\MUT3\RPDATA

This directory is the default reprogramming data pool of M.U.T.-III, referred from 10-4-1, 10-5-2(a),(b),(d).

-After completing the data transfer, ECU reprogramming will start sequentially. (Refer to 10-5-3.)

- (2) Data selection

Select a drive on the left chart, and the directories in the drive are displayed on the right chart.

-To move to a lower directory, select appropriate row on the right chart and press  button.

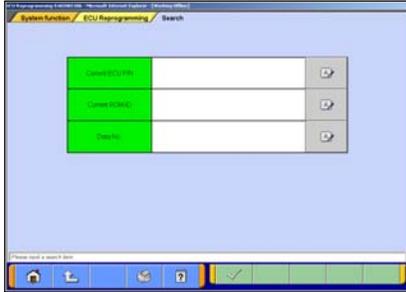

-To move to an upper directory, select  row on the right chart and press  button.

Select appropriate directory name row on the right chart, and press  button to return to (1) and list the files contained in the directory.

## Reprogramming Operation (V.C.I. - PC connected)

### (d). Search

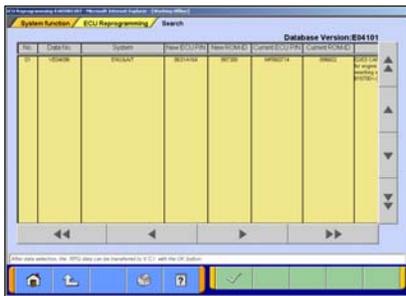

To search the reprogramming data by inputting ECU Part No., ROM-ID, or Data No.

- Press **Search** button on the function menu, then the left screen appears.  
Input search key info in the input column, then press .

Note:

- To input, 2 ways can be taken.
  - By PC keyboard
  - By virtual keyboard --press
- Some info need to be a combination with the other info for data search
  - **Current ECU P/N & ROM-ID** need to be together.
  - **Data No.** needs no other info.

- Results

Select appropriate data with scrolling the list using buttons and press to start transferring the data into V.C.I memory.

--10 lines scrolling

-After completing the data transfer, ECU reprogramming will start sequentially. (Refer to 10-5-3.)

Note:

Press **OK** button when message window of device removal warning comes out at start and end of data transfer.

### 10-5-3. Reprogramming ECU (V.C.I. --> vehicle ECU)

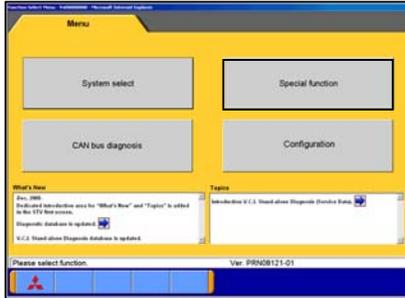

Operate with buttons (in the lower right corner of the screen) according to directions of screen display.

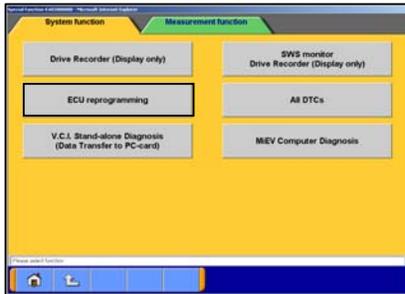

The same operation as 10-4-4. need to be performed on PC screen.

# Reprogramming by CAN Communication

## 10-6. Reprogramming by CAN Communication

(1) Press **Special Function** button on STV Top Menu.

(2) Press **ECU reprogramming** button.

(3) Select an appropriate button.

**Automatic Reprogramming (K-line)** --to 10-5-2(a)

- Automatically searches appropriate Reprogramming data stored in PC.

**Database File Display (K-line)** --to 10-5-2(b)

- Shows the list of Reprogramming data stored in PC.

**Reprogramming Data Selection** --to 10-5-2(c)

- Allows to select Reprogramming data in arbitrary drive and directories.

**Search** --to 10-5-2(d)

- Allows to search the target data by ECU No., ROM-ID, etc.

**Automatic Reprogramming (CAN)** --to 10-6(a)

- Automatically searches appropriate Reprogramming data stored in PC.

**Database File Display (CAN)** --to 10-6(b)

- Shows the list of Reprogramming data stored in PC.

**Memory card transfer** --to 10-4-1

- Transfer of stored Reprogramming data to Memory card.

# Reprogramming by CAN Communication

## (a). Automatic Reprogramming

(1) Press **Automatic Reprogramming (CAN)** button.

(2) Vehicle choice

-Selected Model year and Model Code of the vehicle are indicated.

-Select a system (ECU) and loading option, and press  button.

-If you select other Model year and Model code, press  button and select model.

(3) Check

Check all equipment properly then press  button.

# Reprogramming by CAN Communication

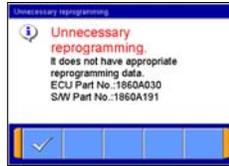

## (4) Data search

Searching the target reprogramming data.

Target data found

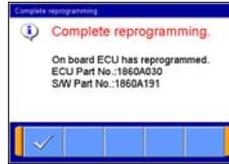

Unnecessary reprogramming

### < Unnecessary reprogramming >

- Appropriate reprogramming data is not released.
- Onboard ECU Part No. and S/W Part No. are indicated.

Complete reprogramming

### < Complete reprogramming >

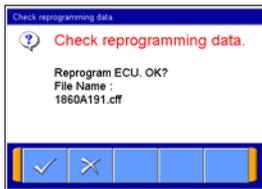

- Onboard ECU has reprogrammed.
- Onboard ECU Part No. and S/W Part No. are indicated.

## (5) Data check

-The appropriate reprogramming data is indicated.

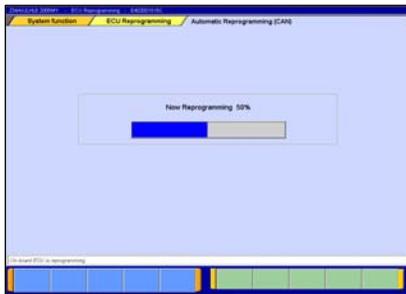

-Press button to go to next.

## (6) Reprogramming data check

-Check and press button.

-If you select other repro. data, press button to back.

## (7) Reprogramming

Reprogramming on board ECU starts.

## (8) Reprogramming completed

-Reprogramming is completed properly.

-Reprogrammed ECU Part No. and S/W Part No. are indicated.

-Press button, and turn IG switch OFF.

### (b). Database File display

Press **Database File Display (CAN)** button on the function menu, then the left screen appears.

Reprogramming data files in the hard disk are listed.

#### NOTE:

Can't possible update at select data from data list.

## 10-7. Troubleshooting of Reprogramming

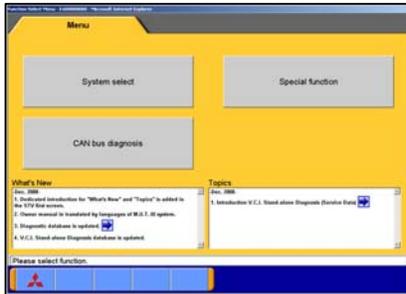

Those contents have moved to 13-4.

## Chapter 11 Computer Diagnosis

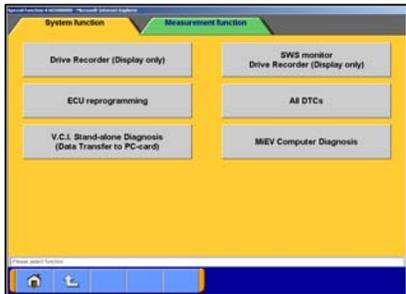

### 11-1. Operation method of MiEV Computer Diagnosis

#### 11-1-1. Setting and execution of MiEV Computer Diagnosis

- (1) You can perform the MiEV computer diagnosis.  
Press **Special Function** button on the STV Top Menu.

- (2) Select the **System function** tab on the upper part of the screen, and then press **MiEV Computer Diagnosis** button.

- (3) Press **Diagnosis** button on the MiEV Computer Diagnosis Menu. - to (4)

Note:

**Save File Management** -- The saved file at diagnostic result is having a look displayed. (refer to 11-1-2)

**Data Storage** -- The data saved in a removable disk can be stored into the PC. (refer to 11-1-3)

< Remark >

There is a possibility that correct diagnostic result is not expected to obtain in the state of less than 50% charge of the high voltage battery, so please ensure that it is fully charged for your operation.

## Operation method of MiEV Computer Diagnosis

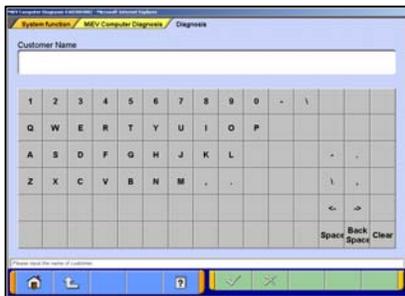

(4) Input of Vehicle Information

Confirm the contents of Diagnosis Vehicle information list on the screen.

- If the information is just the vehicle to be perform diagnosis, press  .

- to (5)

- If the information is not the vehicle you want, press  to select appropriate one. (refer to 3-3-2)

(5) Input of the customer's name

Please input of customer's name.

32 characters are allowed to input.

< Remark >

You can input the customer's name either by using the PC keyboard or the screen keyboard.

(6) Input of the vehicle identification number

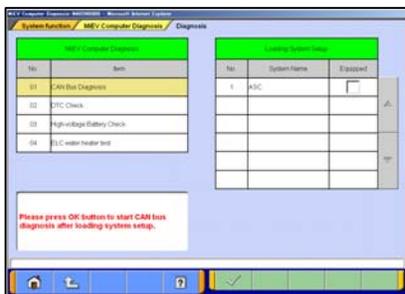

Please input VIN of the vehicle to be diagnosed.

17 characters are allowed to input.

 -- OK -- to (7)

< Remark >

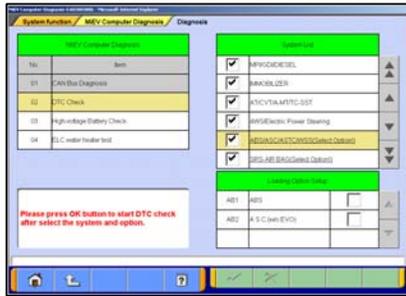

You can input VIN either by using the PC key board or the screen keyboard.

(7) CAN Bus Diagnosis

CAN bus diagnosis is executed by pressing the  button after setting the equipped system.

## Operation method of MiEV Computer Diagnosis

### (8) DTC Check

The DTC Check is executed by pressing the  button after setting of the system and the option select.

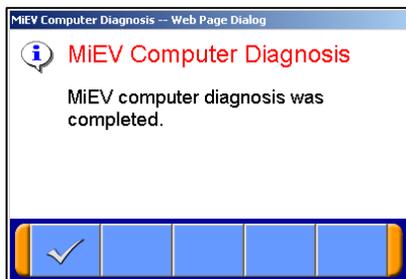

### (9) High-Voltage Battery Check

In the power switch of the vehicle is in the status of "READY", the high voltage battery check is executed automatically.

### (10) ELC.water heater test

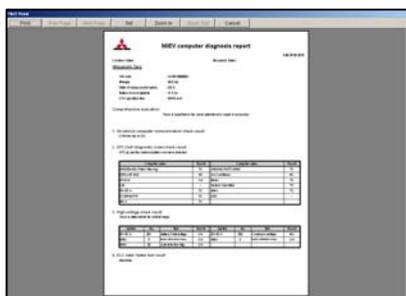

ELC.water heater test is executed automatically.

### (11) Diagnosis completed

When all diagnoses are successfully completed, the dialog that MiEV computer diagnosis was completed is displayed.

 -- OK -- to (12)

### (12) Print preview

The print preview of the diagnostic result is displayed, you can print it out if needed.

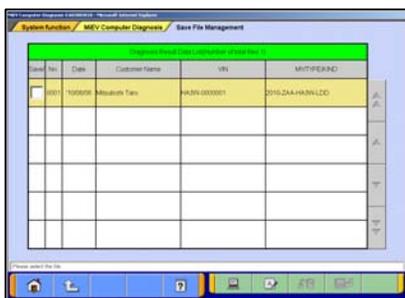

## Operation method of MiEV Computer Diagnosis

## Operation method of MiEV Computer Diagnosis

### 11-1-2. Save File Management

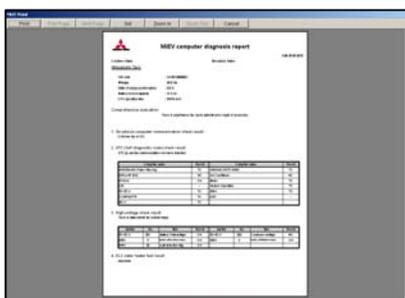

- (1) Diagnosis result data list  
 Press **Save File Management** button on the MiEV Computer Diagnosis Menu at 11-1-1(3), the data saved with MiEV Computer Diagnosis is displayed.  
 Four functions that display / print of diagnostic result, correction of information on data, delete of data and saved to removable disk are available. (refer to 6-2-2 (3) )

-  -- Print of diagnostic result -- to (2)
-  -- Edit record information -- to (3)
-  -- Delete the data file -- to (4)
-  -- Save the data file -- to (5)

< Remark >

It is sequentially displayed from the latest data in the upper part of the table.  
 The background color of the selected file turns yellow.  
 Save / Delete button of data cannot be pushed until the check box in the left part in the table is checked.

- (2) Print of the diagnosis result  
 The diagnostic result of the data selected in the diagnosis result data table of (1) is displayed on the print preview screen.  
 Please print after connecting the printer.

- (3) Edit Data Information  
 Information on the saved data selected in the table of (1) can be edited again. (information input by (5) - (6) of 11-1-1.)

-  -- To (1) after saved edit information.
-  -- To (1) after deleted edit information.

## Operation method of MiEV Computer Diagnosis

### (4) Delete Data

Data that checks(✓) **Save / Delete** column is deleted in the diagnosis result data table of (1).

### (5) Save Data

Data that checks(✓) **Save / Delete** column in the diagnosis result data table of (1) is kept on a removable disk.

Please select the drive that preservation data from the drive table.

-- To (1) after saved data in the selected drive.

-- To (1) after it cancels.

### 11-1-3. Data Storage

Press **Data Storage** button on the MiEV Computer Diagnosis Menu at 11-1-1(3), the data saved on a removable disk is displayed.

Please select a removable disk where the data of the computer assisted diagnosis was kept from the drive table, and push the OK button.

-- To 11-1-1(3) after completing the data taking

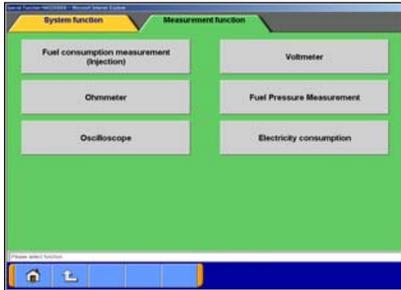

-- To 11-1-1(3) after it cancels.

## Chapter 12 Measurement Functions

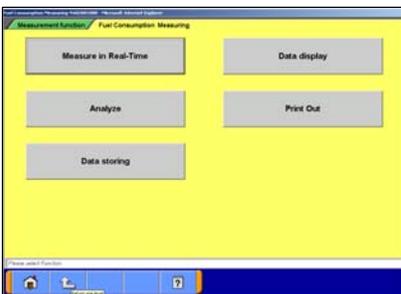

### 12-1. Injector-Type Fuel Consumption Measurement

When this function would be used with the vehicle where the fuel consumption measurement data is not outputted to diagnostic connector, the message of “Function is not supported” is displayed.

#### 12-1-1. Function Select

- (1) Press **Special function** button on the STV Top Menu (illustrated on 3-2), then select **Measurement Functions** tab on the upper part of the screen. Press **Fuel consumption measurement (Injection)** button on this menu screen.

- (2) Function Selection
  - Measurements in Real-time** -- to 12-1-2.
  - Data Display** -- to 12-1-3.
  - Analyze** -- to 12-1-4.
  - Print out** -- To print out the view graph.
  - Data storing** -- To load the data, which is stored in a removal disc, onto the PC.

#### 12-1-2. Measurement in Real-time

- (1) Preparations Prior to Measurement
 

Set the sampling interval, and select the displayed unit of measurement by pressing the ▲ ▼ buttons. If you wish to select display items, press  button. When the setting complete, press  button.

Note:

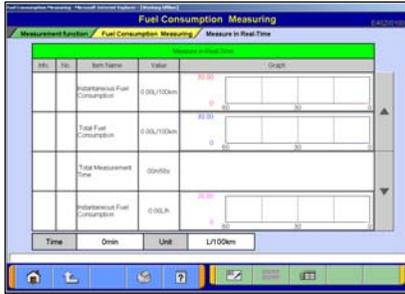

The amount of recording time is proportional determined by the length of the sampling interval.

- (2) Entering and Recording Record Information
 

Enter your user name and the vehicle model type.  button starts the measurement process.

## Injector-Type Fuel Consumption Measurement

### (3) View Graph

The data of 4 items/4 graphs are displayed.

-Pressing  button stops recording.

-Once recording has been stopped, the data is automatically saved.

 --View Text To (4).

Note:

The file name is set as “FU+Year Month Day+Time (military time including seconds)”.

### (4) View Text

 --View Graph To (3)

 --Stop Record

## 12-1-3. Data Display

### (1) Select a record file containing the data you wish to check.

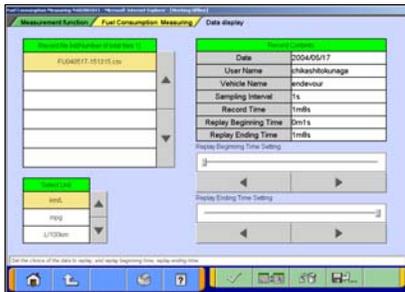

Set the necessary speed range with   , and select unit of measurement with  

Then press .

 --Delete Data

 --Select item

 --Save Data

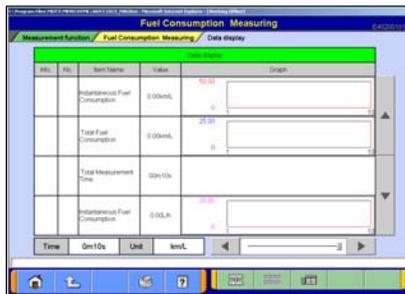

### (2) View Graph

The data of 4 items/4 graphs are displayed.

Pressing   buttons or moving the slide bar displays the value of the cursor line.

 --View Text To (1)

 --Change displayed Unit

### (3) View Text

 --View Graph To (2)

 --Change displayed Unit

### 12-1-4. Performing Simplified Analysis

- (1) Select a record file containing the data you wish to analyze. Set the necessary speed range and displayed unit of measurement, and then press  button.

 --Delete Data

 --Save Data

- (2) Viewing Analysis Results

 --Change displayed Unit

## 12-2. Electricity Consumption Measurement

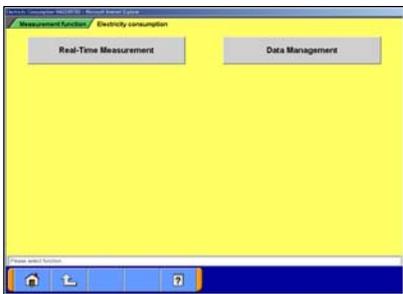

Electricity Consumption Measurement is a dedicated function for electric vehicle and the message of “This function is not supported for this vehicle.” Is displayed if you would try it with engine equipped vehicle.

### 12-2-1. Function Select

- (1) Select **Special Function** at main menu and change tab on top of the screen to [Measurement function]. Please select **Electricity Consumption** from menu.

- (2) Function Selection
  - Real-Time Measurement** -- to 12-2-2.
  - Data Management** -- to 12-2-3.

# Electricity Consumption Measurement

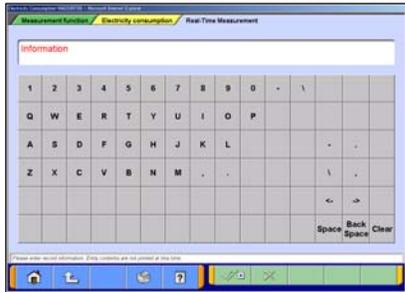

## 12-2-2. Real-time Measurement

Data of following 14 items can be displayed and recorded in real-time.

- Momentary Electric Power (kW)
- Accumulated Electric Power Consumption (kWh)
- Momentary Electric Power Cost (miles/ kWh)
- Average Electric Power Cost (miles/kWh)
- Momentary Vehicle Speed (mph)
- Average Vehicle Speed (mph)
- APS (V)
- Motor speed (rpm)
- Shift Position
- Accumulated Heater Output (kWh)
- Accumulated A/C Output (kWh)
- Distance Traveled (miles)
- Total Measurement Time (h:m:s)
- Idling Time (h:m:s)

<Remark>

- Data update interval and record interval have been fixed in a second. (It can not be changed interval.)
- Distance traveled, Total Measurement Time and Idling Time are not displayed in graph.

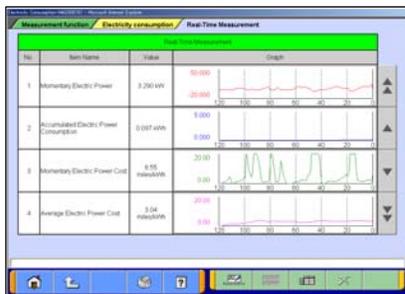

### (1) Record Information Entry

Enter customer name, vehicle name and record information within 50 characters in each screen. Measurement starts with  button of Record Information screen.

<Remark>

You can also use the keyboard of PC.

### (2) View Graph

 Stop record

Once recording has been stopped, the data is saved automatically and file name is set as "EL+Year Month Day+Time".

<EL:Record file in real-time measurement for electricity consumption.>

 -- View Text – to (3)

 -- Return to Record Information Entry screen, then data is being recorded is not saved. -- to (1)

<Remark>

The sort of the record item can not be done while real-time measurement.

# Electricity Consumption Measurement

No.	Item Name	Value	No.	Item Name	Value
1	Momentary Electric Power	6.985 kW	2	Accumulated Electric Power Consumption	0.111 kWh
3	Momentary Electric Power Cost	0.46 minkWh	4	Average Electric Power Cost	8.22 minkWh
5	Momentary Vehicle Speed	3.2 mph	6	Average Vehicle Speed	6.4 mph
7	RPS	2329 v	8	Motor speed	452 rpm
9	Roll Position	0	10	Accumulated Heater Output	0.000 kWh
11	Accumulated A/C Output	0.000 kWh	12	Distance Traveled	0.4 miles
13	Total Measurement Time	0002h02s	14	Billing Time	0000h00s

(3) View Text

-- Stop Record -- 11-2-1. (2)

-- View Graph -- to (2)

-- Return to Record Information Entry screen, then data is being recorded is not saved. -- to (1)

## 12-2-3. Data Management

No.	File Name	Customer Name	Vehicle Name	Record Information
001	1228264-164111-05	161-Michigan	44EV	Information

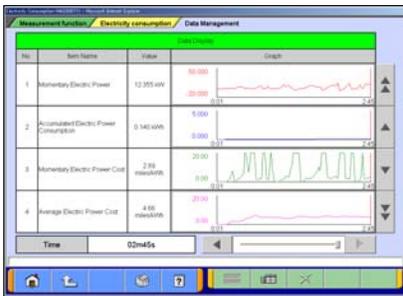

(1) Select a data to be displayed or printed from record file list.

-- Data Display -- to (2)

-- Print Data -- to (4)

(2) View Graph

Selected record file is displayed in graph.

Pressing ◀ ▶ buttons or moving the slide bar in lower right of the screen, displays the value of the cursor line.

-- View Text -- to (3)

-- Return to Data Management screen -- to (1)

No.	Item Name	Value	No.	Item Name	Value
1	Momentary Electric Power	12.355 kW	2	Accumulated Electric Power Consumption	0.140 kWh
3	Momentary Electric Power Cost	2.88 minkWh	4	Average Electric Power Cost	4.88 minkWh
5	Momentary Vehicle Speed	35.7 mph	6	Average Vehicle Speed	14.3 mph
7	RPS	3.919 v	8	Motor speed	2122 rpm
9	Roll Position	0	10	Accumulated Heater Output	0.000 kWh
11	Accumulated A/C Output	0.000 kWh	12	Distance Traveled	0.7 miles
13	Total Measurement Time	0002h45s	14	Billing Time	0000h00s

(3) View Text

(2) Pressing button, displays the values in text.

Pressing ◀ ▶ buttons or moving the slide bar in lower right of the screen, displays the value of the cursor line.

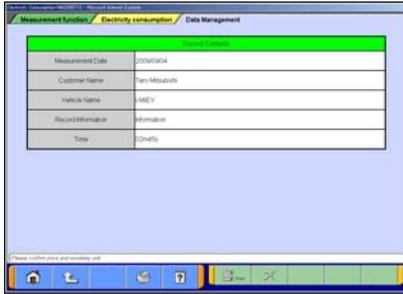

-- View Graph -- to (2)

-- Return to Data Management screen -- to (1)

# Electricity Consumption Measurement

## (4) Print Setting

Record Information of selected file is displayed.

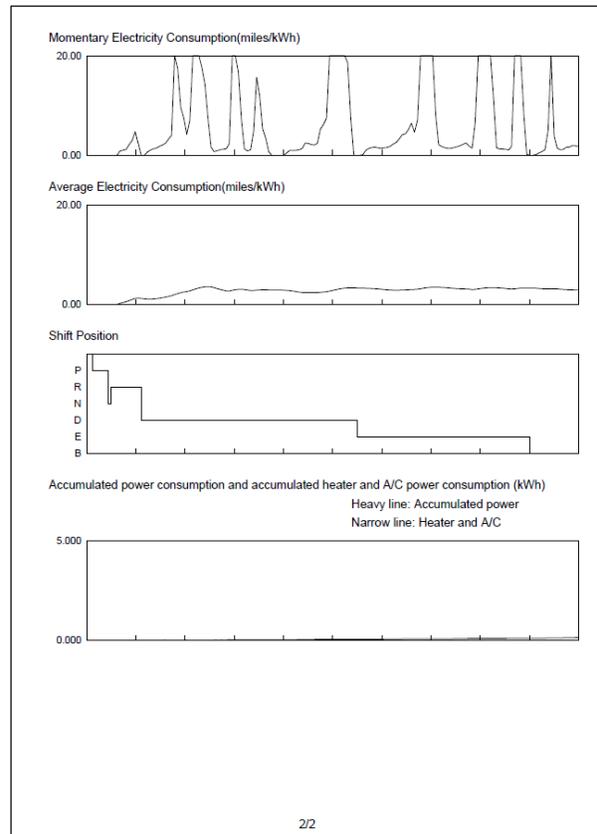

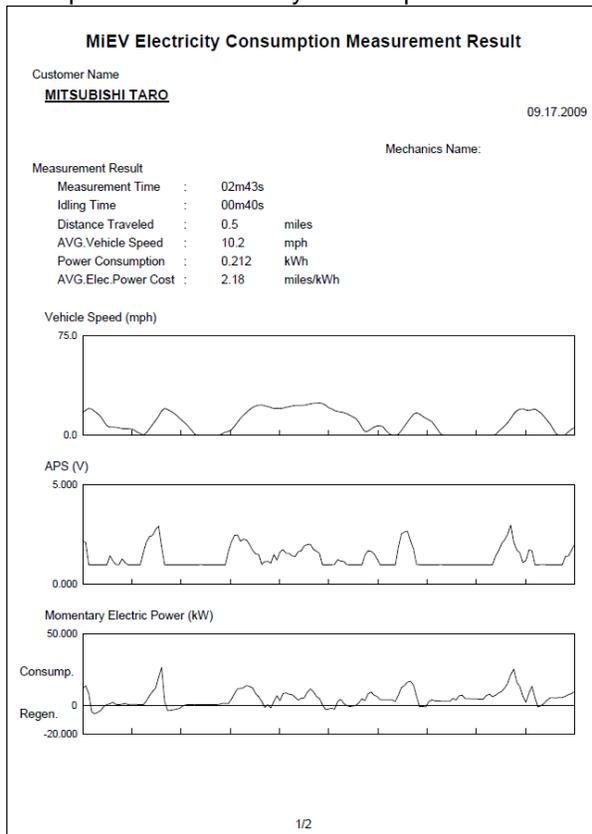

Pressing  button displays Print Setting screen and you can print it out.

 -- Return to Data Management screen -- to (1)

### <Important>

This function figures out the value equivalent to fuel consumption measurement (mpg) for the engine equipped vehicle, which is based on estimate power consumption calculated by values such as current and voltage to be used for vehicle control. Please handle it to the end as a reference value because the charge efficiency etc. when it charges is not involved in the calculation.

## Print preview of electricity consumption measurement

---

## 12-3. Fuel pressure, Voltage, Ohmmeter, Oscilloscope

### 12-3-1. Measuring Fuel Pressure (Not available in US)

(Not supported by V.C.I.-Lite)

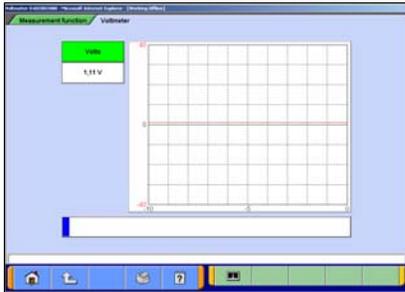

The fuel pressure can be measured using pressure gauge (LP: MB991655 or MB991979 / HP: MB991708 or MB992007), and displayed as text or graph style on PC.

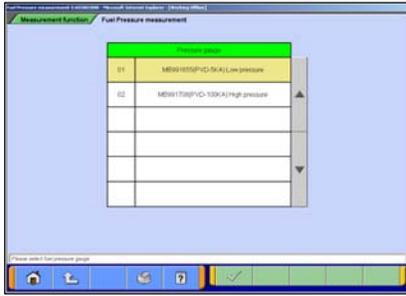

#### (1) Measuring the Calibration Volt

To adjust manufacturing difference of solid state in each pressure gauge, you need to input its calibration value. Please measure the calibration value as follows.

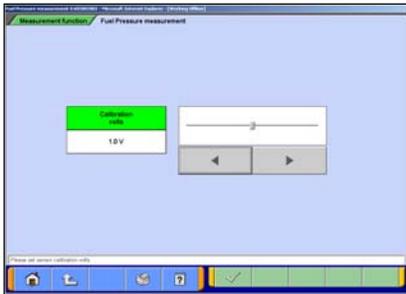

- Connect the pressure gauge to cigarette lighter socket, and to V.C.I. (Don't put the pressure gauge on the fuel pipeline yet.)
- Press **Voltmeter** on the menu screen of 12-1-1(1).
- The displayed voltage is the calibration value of the gauge.

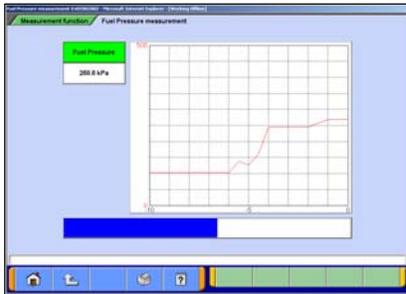

## Fuel pressure, Voltage, Ohmmeter, Oscilloscope

- (2) Put the pressure gauge on the fuel pipeline.  
Press **Fuel Pressure Measurement** on the menu screen of 12-1-1(1).  
The selection screen of pressure gauge appears. Select a pressure gauge and press  button.

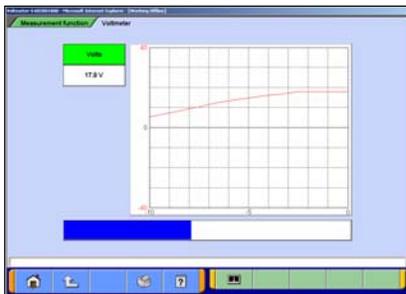

- (3) Entering the Calibration value  
Enter the calibration volt which you measured in (1), and press  button.

- (4) Measuring Fuel Pressure  
The measured value is displayed on the graph.

### 12-3-2. Measuring Voltage and Resistance

(Not supported by V.C.I.-Lite)

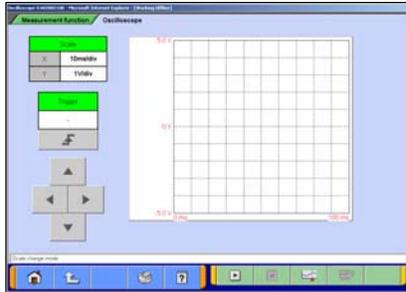

- (1) Press **Voltmeter** or **Ohmmeter** on the menu screen of 12-1-1(1).  
The voltage or resistance value comes from the test leads connected to the trigger terminal and displayed on the PC screen.  
-For details on how to connect the measurement probe, and details for measuring using V.C.I. alone, refer to 2-2-3.  
-Prior to executing the measurement process, calibrate the instrument to 0 using  button.

Note:

- DC voltage can be measured in the range of 0-±40V.
- Resistance can be measured in the range of 0-100KΩ.

## 12-3-3. Oscilloscope Function

(Not supported by V.C.I.-Lite)

- (1) Press **Oscilloscope** on the menu screen of 12-1-1(1).

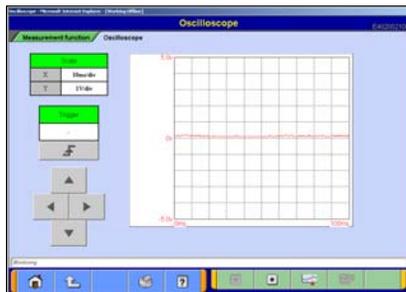

This function allows you to observe the continuous waveform, which is loaded from the voltage measurement terminal, on PC screen using test leads (MB991499, etc).

-  --Starts the waveform display
-  --Stops the waveform display
-  --Switches to Scale mode  
: to set the time axis and voltage axis --(2)
-  --Switches to Trigger mode  
: to set trigger conditions --(3)

Note:

DC voltage can be measured in the range of  $0 \pm 40V$ , and resolution can be measured at 0.1V.

The shortest sampling interval is 500 $\mu$ s.

- (2) Setting the Time Axis and Voltage Axis

 button switches to the scale mode, and the     buttons can be used to set time axis and voltage axis.

-   --Changes time axis scale
-   --Changes voltage axis scale

Note:

Time scale: (10,20,40,100ms/div)

Voltage scale: (1,2,5,8V/div)

- (3) Setting Trigger Conditions

 button switches to the trigger setting mode, and a trigger point can be changed by the     buttons.

-  --Up Trigger
-  --Down Trigger

### Chapter 13 How to Use (Special Case)

#### 13-1. Copy Coding

The procedure "Copy Coding" is described below.

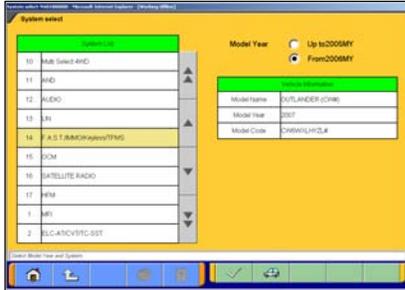

- 1) Read the coding data from the ECU to be removed. And save it to a file.  
-> 13-3-1 – 13-3-2
- 2) Read the customization data from the ECU to be removed. And save it to a file.  
(ETACS ECU Only)  
-> 13-4-1 – 13-4-2
- 3) Exchange the ECU.
- 4) Write the VIN to installed ECU.  
(This procedure is not need since VIN will be written automatically to the ECU when the ECU, which has never been written the VIN, is installed in the car. (Except engine ECU))  
-> 13-2-1 (Engine ECU in the car with immobilizer)  
-> 13-2-2 (other)
- 5) Write the saved coding data in procedure 1 to installed ECU.  
-> 13-3-3
- 6) Write the saved customization data in procedure 2 to installed ECU. (ETACS ECU Only)  
-> 13-4-3

## 13-2. VIN Writing and VIN Information

### 13-2-1. VIN Writing

#### (Case of engine ECU in the car with immobilizer)

- (1) Select "F.A.S.T./IMMO/Keyless/TPMS" on the System Selection screen. (For instruction on how to select a system, refer to 3-3-1)

- (2) Press **Special Function** button.

- (3) Special function menu is displayed.

**ENG key code & VIN Reg.** – Registration of engine key code and VIN writing.

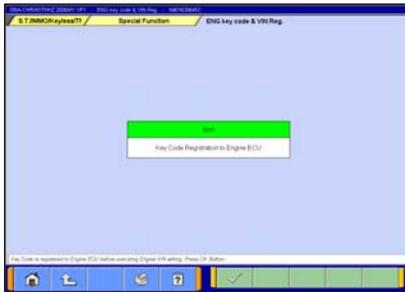

--> (4)

**ENG key code Reg.** – Registration of engine key code only. Use only if correct VIN is writing to the ECU.

--> (4)

- (4) The key code is registered to engine ECU. Press button.

- (5) Press button. When **ENG key code Reg.** was selected, return to (3).

## VIN Writing and VIN Information

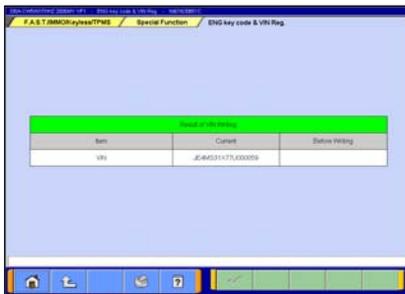

(6) Press  button, after input VIN.

(7) Confirmation dialog box is appears.  
Press  button.

(8) Press  button.

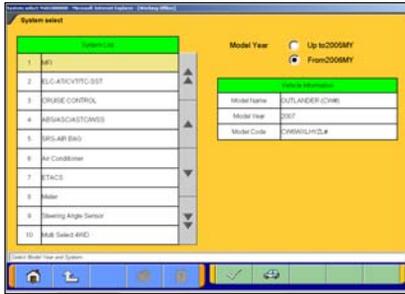

(9) Written VIN is displayed. Check if VIN is written correctly.  
Press  button. --> returns to screen (3).

## VIN Writing and VIN Information

### 13-2-2. Procedure of VIN Writing

#### (Other case)

- (1) Select a system on the System Selection screen in which you want to write VIN.  
(For instruction on how to select a system, refer to 3-3-1)

#### Note:

As a typical example, procedure for VIN writing in MFI is explained below.

Other system may have different menu structure but procedure is basically the same.

Select "MFI" on the System Selection screen.

- (2) Press **Coding** button.

- (3) Coding menu is displayed.

**VIN Writing** – VIN is written. -> (4)

**Chassis No/VIN Writing** – VIN is written. -> (4)

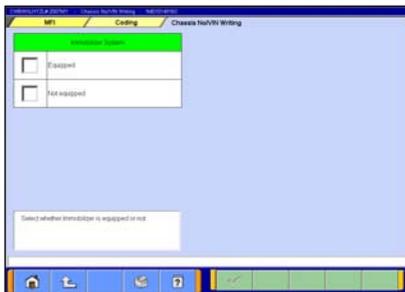

**VIN Information** – VIN is displayed. -> 13-2-3

- (4) Choose whether immobilizer is equipped in the car.

And press **✓** button.

\*This screen is not displayed by selected vehicle and system.

## VIN Writing and VIN Information

(5) Input VIN and press  button.

(6) Confirmation dialog box appears.  
Press  button.

(7) Press  button.

(8) Written VIN is displayed. Check if VIN is written correctly.  
Press  button. --> returns to screen (3).

### 13-2-3. VIN Information

Current VIN is displayed.

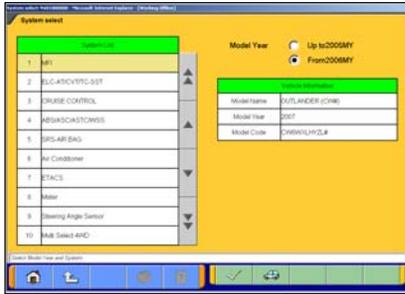

# Coding Operation

## 13-3. Coding Operation

### 13-3-1. Confirmation of the Current ECU Coding Data

- (1) Select "MFI" on the System Selection screen.  
(For instruction on how to select a system, refer to 3-3-1)

Note:

As a typical example, procedure for Coding MFI is explained below.

Other system may have different menu structure but procedure is basically the same.

- (2) Press **Coding** button.

- (3) Coding menu is displayed.

**On Vehicle Coding** -- Writing a coding data

--> to 13-3-3

**Coding Information & Copy** -- Reading the current ECU coding data and saving the data to file

--> to (4)

- (4) The current ECU coding data is displayed.

 -- Save Data --> refer to 13-3-2

## Coding Operation

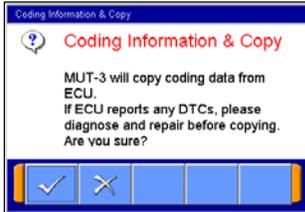

### 13-3-2. Save of the ECU Coding Data

- (1) Press  button on the screen 13-3-1(4), and the left screen will be displayed.

Press  button.

Note:

If diagnostic trouble codes are currently stored in the ECU, the file cannot save. Retry after the vehicle is repaired.

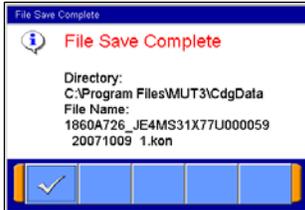

- (2) Confirm the displayed name which the saved file.

Press  button.

Note:

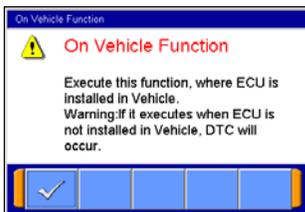

The file name of the saved file is set as "ECU parts No., VIN No., Date and No."

### 13-3-3. Procedure of Variant Coding Writing

- (1) Save a coding file into "C:/Program Files/MUT3/CdgData/" by
  - To read the coding data out of the ECU  
(refer to 13-3-2)
  - or
  - To obtain a variant coding file in advance

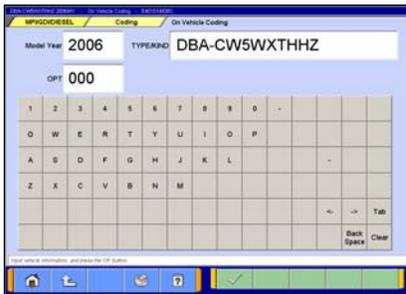

- (2) Press  button .

## Coding Operation

- (3) Input a VIN to list up applied coding files and press  button.

If left screen is displayed, press  button.

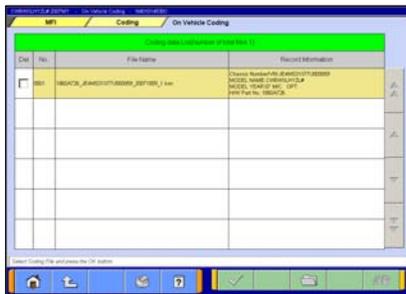

Note:

-Don't change each value in this screen.

Note:

If coding file is not found in the folder, left screen may appear. In such case, press  button. Save the correct file in the folder and try again.

- (4) The applied coding files by the inputted are displayed. Choose a coding file to be written and press  button.  
-The background color of the line containing the selected file changes into yellow.

 -- select a directory

 -- delete the files --> to 13-3-4

- (5) The current ECU coding data and the coding data to be written are displayed. Press  button if OK.

## Coding Operation

(6) Confirmation dialog box appears.

Press  button

Note:

-In case of ETACS, “ETACS customize” and “Option Coding” are initialized after writing variant coding. Rewrite them after finishing coding.

-It is not need that “Option Coding” is executed because the data of “Option coding” includes in variant coding data, if “Copy Coding” was executed.

(7) Press  button

Item	Current	Before Coding
Chassis Number of VPS	JL4K321V17U00000	JL4K321V17U00000
Vehicle Model	LANCER	LANCER
Model year	08	08
Country	JAPAN	JAPAN
Date/destination	Not Defined	Not Defined
Engine type	DR VVT 1.8L	DR VVT 1.8L
Final drive	2ND	2ND
Final gear ratio	6.133	6.133
Tire circumference	205mm	205mm

(8) Written the coding data is displayed. Check if the coding data is written correctly.

Press  button. --> returns to screen 13-3-1(3)

### 13-3-4. Delete of Coding Files

To delete a data file loaded on the PC, click the check box next to file No. in the file list (refer to 12-3-3(4)) to place a check mark, and press  button.

(Two or more check marks can be placed.)

Note:

mark will be displayed, if cursor is moved on a check box and it clicks. (Selection)

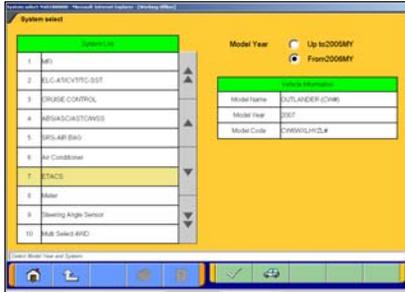

mark is eliminated by clicking again. (Selection release)

# Customization Operation

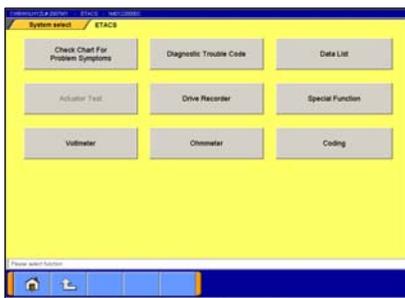

## 13-4. Customization Operation

### 13-4-1. Confirmation of the Current Customization Data

- (1) Select "ETACS" on the System Selection screen.  
(For instruction on how to select a system, refer to 3-3-1)

- (2) Press **Special Function** button.

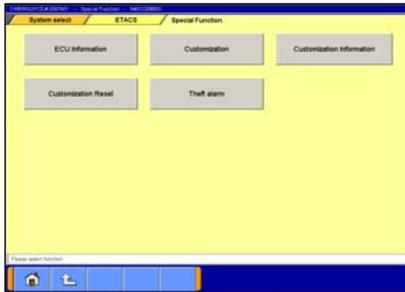

- (3) Special function menu is displayed.

**Customization** -- Writing a customization data

--> to 13-4-3

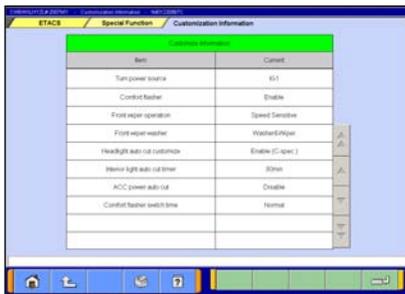

**Customization Information** -- Reading the current customization data and saving the data to file

--> to (4)

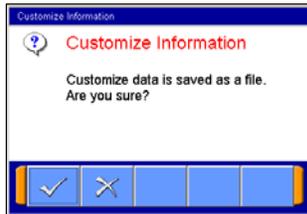

- (4) The current customization data is displayed.

 -- Save Data --> refer to 13-4-2

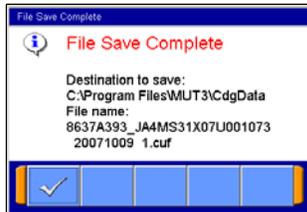

## Customization Operation

### 13-4-2. Save of the Customization Data

- (1) Press  button on the screen 13-4-1(4), and the left screen will be displayed.  
Press  button.

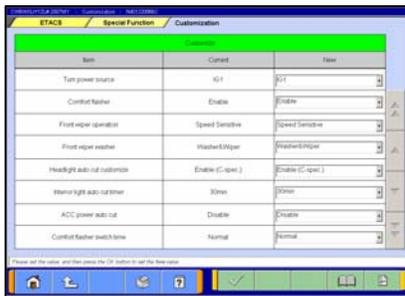

- (2) Confirm the displayed name which the saved file.  
Press  button.

Note:

The file name of the saved file is set as  
"ECU parts No., Date and No."

### 13-4-3. Procedure of Customization

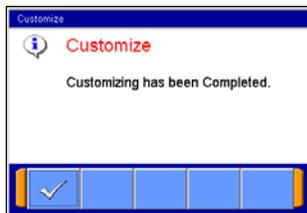

- (1) The current customization data and the customization data to be written are displayed.  
Load the customization data file or change the value. And press  button.

 -- load customization data --> to 13-4-4

 -- load customization items list --> to 13-4-6  
(Not available in US)

- (2) Confirmation dialog box appears.  
Press  button

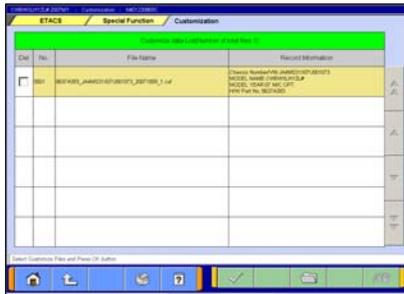

- (3) Press  button

- (4) Written the customization data is displayed. Check if the customization data is written correctly.  
Press  button. --> returns to screen 13-4-1(3)

# Customization Operation

## 13-4-4. Load the Customization Data

The applied customization files by the inputted are displayed. Choose a customization file to be written and press button.

-The background color of the line containing the selected file changes into yellow.

-- select a directory

-- delete the files --> to 13-4-5

## 13-4-5. Delete of Customization Files

To delete a data file loaded on the PC, click the check box next to file No. in the file list (refer to 13-4-4) to place a check mark, and press button.

(Two or more check marks can be placed.)

Note:

mark will be displayed, if cursor is moved on a check box and it clicks. (Selection)

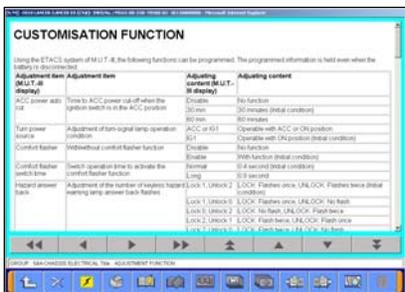

mark is eliminated by clicking again. (Selection release)

## 13-4-6. Load Customization items List (Not available in US)

Click button on the screen 13-4-3(1).

Input vehicle information where you want to confirm the customization function.

The relative page for the customization items is displayed.

\* A vehicle after 10MY is a target.

## Individual Troubleshooting Procedures

### Chapter 14 Troubleshooting Procedures

\*Since a V.C.I.-Lite does not have a power switch, operation button, LCD screen, electronic sound, and indicator lamp (only displays green) they cannot be used in troubleshooting. When troubleshooting procedures in the table below are applied using V.C.I.-Lite and they require turning the power switch on and off, please substitute the following procedure.

\*Disconnect all the harness and cables connected with V.C.I.-Lite once, and then reconnect them.

#### 14-1. Individual Troubleshooting Procedures

This chapter describes troubleshooting guidelines for the causes of main error messages as well as error symptoms.

Note:

- The messages described herein sometimes appear simultaneously with other screens.
- For details regarding circuit inspection, see the electrical wiring diagrams of the applicable vehicle.
- Communications lines are determined by the system and communication method.
- For details regarding the data-link-connector terminal configuration, see the electrical wiring diagrams of the applicable vehicle.

No.	Message/Symptom	Cause	Remedy
1	The V.C.I. does not power up when connected correctly to the vehicle. Be sure the IG switch is ON.	Vehicle power supply failure due to: <ul style="list-style-type: none"> <li>• V.C.I. switch turned OFF</li> <li>• Low battery</li> <li>• Vehicle harness not connected or a short exists</li> <li>• Hardware error</li> </ul>	<ol style="list-style-type: none"> <li>1. Verify that the V.C.I. switch is ON.</li> <li>2. Verify the vehicle battery is sufficiently charged (12V).</li> <li>3. Disconnect and reconnect the connector.</li> <li>4. Check if there is a short in the harness. (Try using a different harness.)</li> <li>5. If the problem is not resolved by remedies 1-4, there may be a hardware error. Request inspection with the harness.</li> </ol>
2	The V.C.I. does not power up from the PC connection with the USB cable. V.C.I. is not connected to vehicle at this time.	PC power supply failure due to: <ul style="list-style-type: none"> <li>• PC power not activated</li> <li>• USB cable not connected or a short exists</li> <li>• Hardware error (PC or V.C.I.)</li> </ul>	<ol style="list-style-type: none"> <li>1. Verify that PC is ON.</li> <li>2. Verify that appropriate USB cable is firmly connected between the PC and V.C.I. (Do not use a USB hub.)</li> <li>3. Disconnect and reconnect the connector.</li> <li>4. Check if there is a short in the cable. (Try using a different harness.)</li> <li>5. If the problem is not resolved by remedies 1-4, there may be a hardware error. Request inspection with the PC.</li> </ol>
3	The screen "Maintenance Mode" appears as soon as the V.C.I. is powered up.	V.C.I. was powered on with pressing "Esc" key.	<ol style="list-style-type: none"> <li>1. Turn the V.C.I. OFF.</li> <li>2. Disconnect USB cable and connector.</li> <li>3. Turn the V.C.I. power ON. (Do not touch "Esc" key.)</li> <li>4. If the "Main Menu" or "PC Communication" display does not appear, the V.C.I. may be at fault. Request inspection.</li> </ol>

## Individual Troubleshooting Procedures

No.	Message/Symptom	Cause	Remedy
4	The screen "ECU Reprogramming" appears as soon as the V.C.I. power is activated.	The V.C.I. basic application has not been installed.	<ol style="list-style-type: none"> <li>1. Connect the unit to the PC (for power activation) while pressing the V.C.I. "Esc" key.</li> <li>2. Verify that the V.C.I. screen display indicates "Maintenance Mode".</li> <li>3. In order to install the V.C.I. basic application, using the automatic version upgrade feature, start the PC M.U.T.-III diagnostic application and attempt diagnosis. (refer to 3-3-1)</li> <li>4. As "Setup V.C.I." dialog box appears on PC screen during the diagnosis, press <input checked="" type="checkbox"/> button.</li> <li>5. When "Update" dialog box disappears on PC screen, the install is completed.</li> <li>6. If, once the application has been downloaded and the V.C.I. power has been reactivated, the "Main Menu" or "PC Communication" display does not appear, request inspection.</li> </ol>
5	The screen "Drive Recorder [1] Record error " appears during recording the Drive recorder with V.C.I. alone.	Communication error	<ol style="list-style-type: none"> <li>1. Press the V.C.I. "Enter" key.</li> <li>2. Verify that the V.C.I. screen display indicates "Drive Recorder Continue? ", press the "Enter" key or wait 10seconds to start recording again.</li> </ol>
6	The following message is displayed. " Failed to communication with V.C.I. Check PC-V.C.I. connection. Refer to M.U.T.-III Manual for other solution."	<ul style="list-style-type: none"> <li>- Contact failure of USB cable</li> <li>- PC does not recognize that the V.C.I. has been connected.</li> <li>- The stand-alone function of V.C.I. is being used.</li> <li>- Have been failed to update firmware of V.C.I..</li> </ul>	Refer to 14-2
7	The following message is displayed. " Fail to communication with V.C.I. Check the USB cable."	<ul style="list-style-type: none"> <li>- The "ECU Reprogramming" function has not been finished perfectly.</li> <li>- Breakdown of USB cable.</li> <li>- Breakdown of USB port of PC.</li> <li>- V.C.I. driver is breaking</li> <li>- The power supplied to V.C.I. is lack. (USB hub is used, etc.)</li> </ul>	
8	The indicator lamp of V.C.I.-Lite blinks.	Firmware update has failed.	Try firmware update again.

## Troubleshooting Procedures on V.C.I. Firmware Update

### 14-2. Troubleshooting Procedures on V.C.I. Firmware Update

Check Point	Remedy
1. Even if the same operation is performed many times, is identical message displayed?	Confirm connection of V.C.I. and USB cable and connection of PC and USB cable.
2. Even if V.C.I. is re-connected by USB cable to PC after V.C.I. was dis-connected with USB cable, does the identical symptom occur?	This problem is settled, if the different symptom occurred.
3. Have V.C.I. been connected by USB cable to PC?	Connect V.C.I. by USB cable to PC.
4. Is the indicator lamp of V.C.I. lighting while V.C.I. is connecting by USB cable to PC?	-
4-1. Is not USB hub using?	Stop use of USB hub since M.U.T.-III is not supporting USB hub, and connect V.C.I. directly by USB cable to PC.
4-2. Even if same V.C.I. are connected by another USB cable to same PC, does the indicator lamp of V.C.I. keep being not lighting?	Exchange and use to a practicable USB cable.
4-3 Even if another V.C.I. is connected by same USB cable to same PC, does the indicator lamp of V.C.I. keep being not lighting?	Request the repair of V.C.I..
4-4. Even if same V.C.I. are connected by same USB cable to another USB port of same PC, does the indicator lamp of V.C.I. keep being not lighting?	Use a practicable USB port of PC.
4-5. Even if same V.C.I. is connected by same USB cable to another PC (M.U.T.-III does not need to have been installed in this PC), does the indicator lamp of V.C.I. keep being not lighting?	Request the repair of PC.
5. Dis-connect V.C.I. with USB cable after main switch of V.C.I. is turned off. (The indicator lamp of V.C.I. will be lighting no longer.) And turns main switch of V.C.I. on after V.C.I. was re-connected by USB cable to PC. Even if this operation execute, does the identical symptom occur?	This problem is settled, if the different symptom occurred.
6. When V.C.I. is re-connected by USB cable to PC after V.C.I. was dis-connected with USB cable, does "beep" sound from V.C.I.?	Re-update the firmware of V.C.I..(*)
7. When V.C.I. is being connected by USB cable to PC (V.C.I. must not be connected by M.U.T.-III main harness to a vehicle), does the screen of V.C.I. display "PC Communication"?	-
7-1. Connect V.C.I. by USB cable to PC. (V.C.I. must not be connected by M.U.T.-III main harness to a vehicle.) After "ECU Reprogramming" function is executed automatically, the following message is displayed on the display of V.C.I.. Is not this symptom occurring? " Application of V CI was erased, update applicati on of VCI. "	Re-update the firmware of V.C.I..(*)

## Troubleshooting Procedures on V.C.I. Firmware Update

Check Point	Remedy
<p>7-2. Connect V.C.I. by USB cable to PC. (V.C.I. must not be connected by M.U.T.-III main harness to a vehicle.) After "ECU Reprogramming" function is executed automatically, the following message is displayed on the display of V.C.I.. Is not this symptom occurring? " Check SW of VCI, or connection with vehicle,or battery voltage."</p>	<p>Connect V.C.I. by M.U.T.-III main harness to the some vehicle, and make the "ECU Reprogramming" function finish perfectly. (It is no problem that the result of ECU Reprogramming is error.) Still if the identical symptom occurs, try re-update of the firmware of V.C.I..(*)</p>
<p>7-3. Connect V.C.I. by USB cable to PC. (V.C.I. must not be connected by M.U.T.-III main harness to a vehicle.) After "ECU Reprogramming" function is executed automatically, the following message is displayed on the display of V.C.I.. Is not this symptom occurring? " Vehicle battery voltage is Low. "</p>	<p>Connect V.C.I. by M.U.T.-III main harness to the some vehicle, and make the "ECU Reprogramming" function finish perfectly. (It is no problem that the result of ECU Reprogramming is error.) Still if the identical symptom occurs, try re-update of the firmware of V.C.I..(*)</p>
<p>7-4. Connect V.C.I. by USB cable to PC. (V.C.I. must not be connected by M.U.T.-III main harness to a vehicle.) After "ECU Reprogramming" function is executed automatically, the message is not displayed on the display of V.C.I.. Is not this symptom occurring?</p>	<p>Re-update the firmware of V.C.I..(*)</p>
<p>7-5. When V.C.I. was connected by USB cable to only PC (V.C.I. must not be connected by M.U.T.-III main harness to a vehicle), does the indicator lamp of V.C.I. light?</p>	<p>Go to check point 4.</p>
<p>8. When V.C.I. is connected by M.U.T.-III main harness to only a vehicle (V.C.I. must not be connected by USB cable to PC), is not "No application" displayed on the screen of V.C.I.?</p>	<p>Re-update the firmware of V.C.I..(*)</p>
<p>9. Even if same V.C.I. are connected by same USB cable to another USB port of same PC, does the identical symptom occur?</p>	<p>Use a practicable USB port of PC.</p>
<p>10. Even if PC was rebooted, does the identical symptom occur?</p>	<p>This problem is settled, if the different symptom occurred.</p>
<p>11. Even if same V.C.I. are connected by another USB cable to same PC, does the identical symptom occur?</p>	<p>Exchange and use to a practicable USB cable.</p>
<p>12. Even if another V.C.I. is connected by same USB cable to same PC, does the identical symptom occur?</p>	<p>Request the repair of V.C.I..</p>
<p>13. Even if M.U.T.-III is re-installed in PC, does the identical symptom occur?</p>	<p>This problem is settled, if the different symptom occurred.</p>
<p>14. Even if same V.C.I. is connected by same USB cable to another PC in which M.U.T.-III was installed, does the identical symptom occur?</p>	<p>Request the repair of PC.</p>

## Troubleshooting Procedures on V.C.I. Firmware Update

---

### NOTE

#### \* Re-update of the Firmware of V.C.I. / V.C.I.-Lite

(Cannot re-update the firmware of V.C.I., if the firmware of V.C.I. is normal.)

1. Boot PC installed M.U.T.-III.
2. Start M.U.T.-III.
3. Click "STV" button. (Ignore this step in US)  
-> Diagnosis main menu will be displayed.
4. Click "System Select" button.  
-> System select menu will be displayed.
5. Connect PC with USB cable.
6. Dis-connect V.C.I. with all connector.
7. While pressing the "ESC" button of V.C.I., connect V.C.I. by USB cable to PC.  
\* In case of V.C.I.-Lite, connect USB cable with V.C.I.-Lite.
8. Confirm "Maintenance Mode" is displayed on the screen of V.C.I..  
(Re-execute step 7 if "Maintenance Mode" is not displayed in the screen of V.C.I..)  
\* Skip this item on V.C.I.-Lite.
9. Release "ESC" button of V.C.I..  
\* Skip this item on V.C.I.-Lite.
10. Click "OK" button in system select menu of M.U.T.-III.
11. Since the dialog of "V.C.I. Setup" will be displayed click "OK" button in this dialog.
12. Wait to re-update firmware of V.C.I. since the re-update of firmware of V.C.I. starts. (for about 100 sec)  
(The dialog of "device dis-connection" will be displayed when the re-update of firmware of V.C.I. started and when finished. Click "O.K." button on the dialog to close the dialog.)

## Troubleshooting of V.C.I. Stand-alone Diagnosis

### 14-3. Troubleshooting of V.C.I. Stand-alone Diagnosis

(Not supported by V.C.I.-Lite)

No.	Message	Cause/Remedy
1	<div style="border: 1px solid black; padding: 5px; width: fit-content;">                     &lt;No DB Error&gt; Check PC Card                 </div>	<Cause> Failed to access the memory card. <Remedy> 1. Verify that the memory card is inserted into PC correctly. 2. Press the V.C.I. "Enter" key to go back to the Main menu, and then start the operations over again.
2	<div style="border: 1px solid black; padding: 5px; width: fit-content;">                     &lt;Version Error&gt; Update Diag.data                 </div> <p>Current Ver Program: **.* Database: **.*</p>	<Cause> The V.C.I. stand-alone diag. database stored in memory card does not work with the V.C.I. built-in program for V.C.I. stand-alone diag. <Remedy> 1. Press the V.C.I. "Enter" key to go back to the Main menu. 2. Remove the memory card, then insert it into PC to update the database. (refer to 4-4-1) 3. If the database is the latest one, connect PC and V.C.I. to update the V.C.I. built-in program. 4. Start the operations over again.
3	<div style="border: 1px solid black; padding: 5px; width: fit-content;">                     &lt;Init. Error-*&gt; Check the system                 </div>	<Cause> Failed to initialize ECU by any cause. <Remedy> 1. Confirm that the system option that you selected is installed in the vehicle. 2. Check if the communication wire between V.C.I and ECU is breaking or not. 3. Verify that proper main harness is connected. 4. Press the V.C.I. "Enter" key, then restart the procedures from system selection operation. (4-4-2(5)) * Check the battery voltage of the diagnosing vehicle.
4	<div style="border: 1px solid black; padding: 5px; width: fit-content;">                     &lt;NRC Error-*&gt; Check the system                 </div>	<Cause> Failed to read out DTCs. <Remedy> 1. Confirm that the system option that you selected is correct. 2. Press the V.C.I. "Enter" key, then restart the procedures from system selection. (4-4-2(5))
5	<div style="border: 1px solid black; padding: 5px; width: fit-content;">                     &lt;Reg. Error-*&gt; Update Diag. data                 </div>	<Cause> The information read from ECU is not registered in the database. <Remedy> 1. Remove the memory card, then insert it in PC to update the database. (refer to 4-4-1) 2. Start the operations over again.
6	<div style="border: 1px solid black; padding: 5px; width: fit-content;">                     &lt;Comm. Error&gt; Retry?                 </div>	<Cause> Communication between V.C.I. and ECU got disconnected from any cause. <Remedy> 1. Verify that the IG switch is turned ON. 2. Check if the communication wire between V.C.I. and ECU is disconnected or not. 3. Pressing the V.C.I. "Enter" key proceeds on the diagnosis. * Check the battery voltage of the diagnosing vehicle.

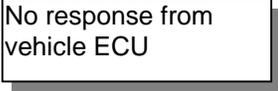

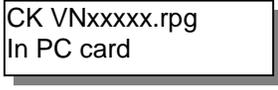

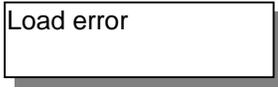

## Troubleshooting of Reprogramming

### 14-4. Troubleshooting of Reprogramming

#### 14-4-1. Trouble of Reprogramming on K-Line Communication

No.	Message	Cause/Remedy
1	During ECU reprogramming  <div style="border: 1px solid black; padding: 5px; width: fit-content;">Vehicle battery voltage is low.</div>	<Cause> <ul style="list-style-type: none"> <li>• Due to low battery supplied to V.C.I.. (The voltage of battery falls down 9.7V and below for 5 seconds.)</li> <li>• The V.C.I. has connected to PC without connection to vehicle during retry of reprogramming.</li> </ul> <Remedy> <ol style="list-style-type: none"> <li>1. Verify the connection between V.C.I. and vehicle, and check the battery carried in the vehicle. Recharge or replace it as needed.</li> <li>2. Press the V.C.I. "Enter" key to reboot the V.C.I.</li> </ol>
2	During ECU reprogramming  <div style="border: 1px solid black; padding: 5px; width: fit-content;">Checking ECU Download error.</div>	<Cause> <ul style="list-style-type: none"> <li>• Failed to communicate with ECU during ECU- checking.</li> </ul> <Remedy> <ol style="list-style-type: none"> <li>1. Turn off the IG switch.</li> <li>2. Press the V.C.I. "Enter" key and reboot the V.C.I. to restart the procedure.</li> </ol>
3	During ECU reprogramming.  <div style="border: 1px solid black; padding: 5px; width: fit-content;">ECU-Check error Press Enter key</div>	<Cause> <ul style="list-style-type: none"> <li>• Disagreement of the data in ECU and it in memory card.</li> </ul> <Remedy> <ol style="list-style-type: none"> <li>1. Press the V.C.I. "Enter" key The reprogramming will be continued using data in memory card.</li> </ol>
4	During ECU reprogramming  <div style="border: 1px solid black; padding: 5px; width: fit-content;">Download error No. ****</div> <div style="text-align: center; margin: 5px 0;">                         ↑ Auto-change in 4 sec ↓                     </div> <div style="border: 1px solid black; padding: 5px; width: fit-content;">Press Enter key to retry</div>	<Cause> <ul style="list-style-type: none"> <li>• Disconnect during reprogramming</li> <li>• IG OFF during reprogramming</li> <li>• Communication error</li> <li>• Voltage of battery fall down</li> </ul> <Remedy> <ol style="list-style-type: none"> <li>1. Verify the connection of harness, and condition of battery carried in the vehicle.</li> <li>2. Press the V.C.I. "Enter" key and reboot the V.C.I. to retry. (Retry the procedure until the reprogramming completed properly on the error occurred vehicle.)</li> </ol> [Error code list] <ul style="list-style-type: none"> <li>001A/B : Communication error A/B</li> <li>002A/B : ECU data erasing error A/B</li> <li>003A/B : Data writing error A/B</li> <li>004A/B : Data reading error A/B</li> <li>004C : Data verifying error</li> <li>005A : Diagnosis erasing error</li> </ul>
5	After select [Automatic RPG] from V.C.I. Main menu.  <div style="border: 1px solid black; padding: 5px; width: fit-content;">D/B incorrect Reinstall D/B</div>	<Cause> <ul style="list-style-type: none"> <li>• Reprogramming data base file (MUT-3REP.csv) in the memory card is incorrect.</li> </ul> <Remedy> <ol style="list-style-type: none"> <li>1. Press the V.C.I. "Enter" key and back to Main menu.</li> <li>2. Turn off the V.C.I. and eject the memory card from V.C.I..</li> <li>3. Insert the memory card into M.U.T.III (PC), and transfer the data to the card. Then retry the procedure.</li> </ol>

## Troubleshooting of Reprogramming

No.	Message	Cause/Remedy
6	During Automatic RPG with V.C.I. alone.  	<Cause> <ul style="list-style-type: none"> <li>• There is no ECU for requiring reprogramming</li> <li>• IG switch not positioned "ON".</li> <li>• Main Harness not connected.</li> </ul> <Remedy> 1. Turn off the V.C.I. power. 2. Verify the connection of harness, and condition of harness itself. 3. Verify if the ECU for required reprogramming is installed. 4. Verify if the ECU can communicate with V.C.I. 5. Then redo the procedures.
7	During Automatic RPG with V.C.I. alone.  	<Cause> <ul style="list-style-type: none"> <li>• There is no reprogramming data in memory card although ECU is affected for reprogram.</li> </ul> <Remedy> 1. Press the V.C.I. "Enter" key and back to Main menu. 2. Turn off the V.C.I. and eject the memory card from V.C.I.. 3. Insert the memory card into M.U.T.-III (PC), and transfer the data to the card. Then retry the procedure.
8	During automatic RPG or Load RPG with V.C.I. alone.  	<Cause> <ul style="list-style-type: none"> <li>• Failure of data transfer from memory card to V.C.I..</li> </ul> <Remedy> 1. Press the V.C.I. "Enter" key and back to Main menu. 2. Retry Automatic RPG or Load RPG again.

### 14-4-2. Trouble of Reprogramming on CAN Communication

No.	Message	Cause/Remedy
1		< Cause > <ul style="list-style-type: none"> <li>• No reprogramming data exists for selected vehicle.</li> </ul> < Remedy > <ul style="list-style-type: none"> <li>• Select vehicle type again.</li> </ul>
2		< Cause > <ul style="list-style-type: none"> <li>• Model specifying information (Model Year, Type, Class) is insufficient.</li> </ul> < Remedy > Select vehicle type again.
3		< Cause > <ul style="list-style-type: none"> <li>• No CBF file exists in PC.</li> </ul> < Remedy > <ul style="list-style-type: none"> <li>• Reinstall M.U.T.-III.</li> </ul>

## Troubleshooting of Reprogramming

No.	Message	Cause/Remedy
4		<p>&lt; Cause &gt;</p> <ul style="list-style-type: none"> <li>• Connection between V.C.I. and vehicle malfunctioned.</li> <li>• The power switch of V.C.I. is OFF.</li> </ul> <p>&lt; Remedy &gt;</p> <ul style="list-style-type: none"> <li>• Confirm connection between V.C.I. and vehicle.</li> <li>• Confirm the power switch of V.C.I.</li> </ul>
5		<p>&lt; Cause &gt;</p> <ul style="list-style-type: none"> <li>• No reprogramming data (CFF file) exists in PC.</li> </ul> <p>&lt; Remedy &gt;</p> <ul style="list-style-type: none"> <li>• Reinstall reprogramming data (CFF file).</li> </ul>
6		<p>&lt; Cause &gt;</p> <ul style="list-style-type: none"> <li>• While reprogramming, an error occurred.</li> </ul> <p>&lt; Remedy &gt;</p> <ul style="list-style-type: none"> <li>• Restart reprogramming process from beginning.</li> </ul>
7		<p>&lt; Cause &gt;</p> <ul style="list-style-type: none"> <li>• Diagnosis code couldn't be erased.</li> </ul> <p>&lt; Remedy &gt;</p> <ul style="list-style-type: none"> <li>• Erase the DTC by diagnosis function of M.U.T.-III.</li> </ul>
8		<p>&lt; Cause &gt;</p> <ul style="list-style-type: none"> <li>• An error occurred in accessing database to search reprogramming data.</li> </ul> <p>&lt; Remedy &gt;</p> <ul style="list-style-type: none"> <li>• Reinstall M.U.T.-III.</li> </ul>
9		<p>&lt; Cause &gt;</p> <ul style="list-style-type: none"> <li>• The internal process error occurred on database to search the reprogramming data.</li> </ul> <p>&lt; Remedy &gt;</p> <ul style="list-style-type: none"> <li>• Reinstall M.U.T.-III.</li> </ul>

### Chapter 15 Reference Material

#### 15-1. V.C.I. Electrical Properties

##### <Power Supply Properties>

<u>Rated voltage</u>	<u>DC12V, 24V</u>
<u>Ground polarity</u>	<u>(-)</u>
<u>Power supply (guaranteed operation range)</u>	<u>DC 8.0 - 32.0 V</u>
<u>Power supply reverse current</u>	<u>DC - 40 V (1 minute period)</u>
<u>Unit current consumption (maximum)</u>	<u>1A</u>

(When voltage is within the guaranteed operation range)

- ◆ Excludes conditions when the voltage is not within the guaranteed operation range and special conditions such as when a ground short occurs on an updated control terminal, etc.

The amount of current consumption when the unit is used with rated power supply is 420mA or less.

#### 15-2. V.C.I.-Lite Electrical Properties

##### <Power Supply Properties>

<u>Rated voltage</u>	<u>DC12V, 24V</u>
<u>Ground polarity</u>	<u>(-)</u>
<u>Power supply (guaranteed operation range)</u>	<u>DC 8.0 - 32.0 V</u>
<u>Power supply reverse current</u>	<u>DC - 40 V (1 minute period)</u>
<u>Unit current consumption (maximum)</u>	<u>350mA</u>

(When voltage is within the guaranteed operation range)

- ◆ Excludes conditions when the voltage is not within the guaranteed operation range and special conditions such as when a ground short occurs on an updated control terminal, etc.

The amount of current consumption when the unit is used with rated power supply is 200mA or less.

## Appendix

### << Terminology >>

In alphabetical order

#### A

**AMT:** Abbreviation for Automated Manual Transmission Electronic Controlled Unit.

**ASC:** Abbreviation for Active Skid Control System.

#### C

**CAN:** Abbreviation for Controller Area Network. A system that shares data between ECUs through communication. The processing of each command (signal) is possible using a communication line only.

#### D

**Data transmission:** The transmission of data stored from one memory area to another memory area. In the case of M.U.T.-III, this refers to the transmission of data from the V.C.I. memory area to the PC.

**Default:** Initial setting. A predetermined value that is set when an item that should be defined is not defined.

**Diagnosis:** Refers to the self-diagnosis function. A system in which the ECU installed in the vehicle monitors input signals from the various sensors and switches and, when an error occurs or erroneous information is identified, records the data in memory.

#### E

**ECU:** Abbreviation for Electronic Control Unit. The control unit of the electronic control system.

**EPS:** Abbreviation for Electric Power Steering

#### I

**I/F cartridge:** A cartridge used when the ECU communication method employed is a special method or when M.U.T.-III functions have been expanded and support is not possible by the M.U.T.-III unit alone. The various I/F cartridges, such as the cartridge for the SWS monitor set in M.U.T.-II or the cartridge for DCC communication, can be used as is.

#### M

**Memory card:** A medium used to store data. Records data such as those used for ECU updates. With M.U.T.-III, flash memory is employed which allows the user to electrically change the data as well as maintain the information even if the power is turned off. Batteries are not required.

## <<Terminology>>

---

### **O**

**Online help:** Also referred to as the online manual. An operation manual loaded on M.U.T.-III, which gives easy-to-understand explanations on how to use the various functions. It also provides processing methods related to the operation currently performed when the user is unsure how to perform an operation during application use.

### **R**

**RAM:** Abbreviation for Random Access Memory. A memory device that is capable of both read and write operations. The information stored in this device is lost when the power is turned off.

**ROM:** Abbreviation for Read Only Memory. A memory device that is capable of read operations only. The information stored in this device is maintained even when the power is turned off.

### **S**

**Serial communication:** A method in which the bits that make up digital data are transmitted in series one bit at a time on the communication line. The reading of diagnostic code via communication from the ECU using the M.U.T. is referred to as "Pattern Diagnosis."

**Slide bar:** A method in which a value is entered by moving a bar.

**SWS:** Abbreviation for Smart Wiring System. A system that centrally controls multiple electrical signals on one harness, thereby minimizing the number of harnesses used. The SWS led to the development of the multiplex transmission system, making harness weight reduction and the development of multifunctional electrical components possible.

### **V**

**V.C.I.:** Abbreviation for Vehicle Communication Interface. The communication interface used to connect the ECU mounted in the vehicle with a PC.

## Screen Button Explanations

### << Screen Button Explanations >>

The name and function of each button icon are described below.

Button Image	Button Name	Button Function
	Main menu	Returns the screen to the M.U.T.-III Start screen.
	Home	Returns the screen to the top menu screen.
	Return one level	Returns the screen to the upper layer screen.
	OK or YES	Determines an outcome.
	Cancel	Cancels the operation or closes the screen.
	Help	Displays online help.
	Print screen	Print the screen image.
	Katakana character input screen	Opens the katakana character input screen.
	View vehicle information	Displays vehicle information.
	Erase	Erases diagnosis data
	History	Displays history of vehicle information settings.
	View graph1	Displays four items on four graphs.
	View graph2	Displays (overwrites) four items on one graph.
	View text	Displays text.
	Change time scale	Changes the graph display time scale.
	Change data scale	Changes the graph display data scale.
	Select item	Opens the Item selection screen.
	Sort	Sorts the list into default order.
	Run	Starts the item.
	Stop	Stops the item.
	Pause	Pause

Button Image	Button Name	Button Function
	Add	Adds items.
	View V.C.I. Regeneration data	Displays a list of V.C.I. Regeneration data.
	Delete file	Deletes files.
	Previous page	Displays the previous page.
	Next page	Displays the next page.
	Record end	Ends the recording
	Manual trigger	Generates a manual trigger.
	Transmit data	Transmits the data of the selected block to the PC.
	Save data	Saves the selected data files to a removable disk.
	Alphanumeric input screen	Opens the alphanumeric input screen.
	Trigger point data	Jumps to the trigger point.
	Data extraction settings	Opens the extraction condition setting screen.
	Data search settings	Opens the search condition setting screen.
	Correlation chart	Opens the correlation chart setting screen.
	Distribution map	Opens the distribution chart setting screen.
	Time setting	Opens the Time extraction/search condition setting screen.
	1/2	Change of function button (1/2 display)
	2/2	Change of function button (2/2 display)
	1/3	Change of function button (1/3 display)
	2/3	Change of function button (2/3 display)
	3/3	Change of function button (3/3 display)

## Screen Button Explanations

Button Image	Button Name	Button Function
	Save to HDD	Save to Hard drive.
	Disconnect cartridge	Disconnects the SWS monitor cartridge.
	Start diagnosis	Starts diagnosis and displays the result.
	Related information	Displays related information
	Zero point calibration	Corrects the calibration on measurement function.
	Change unit	Changes the displayed unit of measurement.
	Change scale	Changes the scale.
	Trigger setting	Sets the Oscilloscope function trigger.
	Up trigger	Generates a trigger at the time of a rise.
	Down trigger	Generates a trigger at the time of a fall.
	Select drive	Opens the drive selection screen.
	Select folder	Opens the selected folder.
	Read VIN/Chassis No	Read out VIN/Chassis No. from ECU.
	Workshop Manual start	Start multiple Workshop Manuals
	Indicative data print	The data which is being indicated is printed.
	Select system	Opens the system selection screen.
	All select	The all items are done in the selective state.
	All deselect	The all items are done in the deselect state.
	Further diagnosis	Proceeds to the further diagnosis.
	Diagnosis end	A diagnosis is completed.
	Revision points	Display of revision points.
	Security information acquisition	Acquires Security information.

Button Image	Button Name	Button Function
	Esc	ESC Key function of V.C.I.
	Enter	Enter Key function of V.C.I.
	Down arrow	Down arrow Key function of V.C.I.
	Bookmark	Displays bookmarks (pages with bookmarks).
	View MSB	Displays MSB to check revision points of the Service manual.
	Connector index	Returns the screen to the search list screen.
	Group top	Returns the screen to the list of the presently displayed groups (or to the list of reference groups)
	Previous display	previously displayed screen.
	Zoom in	Enlarges the display.
	Zoom out	Reduces the display.
	Customization setting initialization	The SWS customization function is initialized.
	Zoom	Enable CAN Bus configuration screen to zoom in/out.
	OK/Measurement starts	Fix and start Measurement.
	Clockwise	Rotates the rotation direction set value to the right.
	Counterclockwise	Rotates the rotation direction set value to the left.
	Illustration size initialization	An illustration is displayed with the original size.
	Previous change point	Moves SWS monitor data (using all item change points as reference).
	Next change point	Moves SWS monitor data (using all item change points as reference).
	Search list	Returns the screen to the Search list screen.
	Search revision points	Displays the search revision points screen.
	File select	Displays the file select screen.
	Data manual select	Data manual select.

## Screen Button Explanations

---

Button Image	Button Name	Button Function
	Read data	Read data.
	Timer reset	Timer reset.

Button Image	Button Name	Button Function
	Read from HDD	Data is read from HDD.
